The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one:—

Berridale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited, Orillia.

Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

The Lidgerwood Patent

Hauling Loaded Sleds over a Ridge

SLEIGH HOIST

A machine designed to hoist or lower sleighs loaded with logs, pulpwood, bark or other forest products, in mountain logging.

It handles steadily and under perfect control the largest sleigh loads, on any hill, **no matter how steep**, and up to 3,500 ft. in distance.

Saves horses when used with them. Maiming and killing of horses on steep hills is eliminated; saves the horses from the hardest work, that of taking the empty sleighs up the hills.

Does what horses can not do. The hardest uphill haul costs no more than hauling on the level with horses. Enables bringing timber over heights of land, thus frequently saving long hauls; the improving of small streams; or the absolute loss of stumpage.

It pulls itself about in the woods; uses wood for fuel; and is simple to operate.

We now have a representative in Canada, who will examine your conditions and tell you what can be done, free of charge of any nature.

SIMONDS

**Inserted
Point
Saws**

**Made
in
Montreal**

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take \$100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 19

Quebec Spruce Popular in England

The increasing use of Quebec spruce in Great Britain, in the face of the competition of the cheaper goods from New Brunswick, has drawn a great deal of attention of late. The London Timber Trades Journal sees in it the natural working of the law of the survival of the fittest. It states that the price of New Brunswick spruce has advanced, until the difference in price between it and the Quebec spruce is small enough to warrant consumers in buying the latter, which is "economically preferable for first-class box-making purposes." If the difficulty with New Brunswick spruce is largely one of grading and the filling of special specifications, it could be overcome. The sooner attention is given to the matter the better. The article upon the subject in the "Timber Trades Journal" is as follows:

"With a raw material so elementary as wood, it is only over a long period of time that changes of predilection among consumers for one or another description of stub or size or mode of manufacture can be readily discerned. In this connection reference may, we think, be drawn to the increasing favor with which Quebec spruce appears to be looked upon for box and case making purposes. In quality, and more particularly in manufacture, the deals, which, though shipped from the various loading places on the St. Lawrence, bear the general name of Quebec spruce, are generally admitted to be greatly superior to shipments from St. John and other lower port stocks. When these latter shipments ranged in prices round about £6 or £7 c.i.f., and at the same time contained a decent percentage of 11-inch deals, wane as well as waste, due to bad cutting or other causes, were less momentous matters to the box-maker, who paid a moderate profit on those values, than when, as at the present time, he

has to buy at a profit on figures closely approximating to £8 per standard c.i.f. At the enhanced prices of to-day it is not surprising to us to find that many buyers appear to look upon Quebec spruce, though dearer, as economically the more preferable article for first-class box-making purposes.

"A further cause which will, we think, tend to bring about a larger demand for Quebec spruce for box-making purposes is a little more remote, and requires explanation. Popular daily journalism published at cheap rates has so enormously increased the power of advertising that quite the larger share of the daily wants of the masses of the country are met by proprietary articles. In many cases the huge manufacturing concerns upon whom the public rely for tobacco, biscuits, cocoa and what not have set up their own box and case making plants and the ability to secure special specifications added to the advantages of a fixed grading, and, with waste reduced to a minimum, has, in the estimation of these buyers, left a balance of advantage in favor of Quebec spruce as against the stuff shipped from the ports of New Brunswick. With the great attention which nowadays is given by large manufacturing firms engaged in the production of food supplies and similar articles of daily consumption to the appearance of their boxes and cases, there is, we think, likely to be in the near future an increasing demand for the better class makes of spruce to the detriment of the commoner shipments."

Development in Tariff Situation

The tariff situation, as it strikes a Canadian lumberman at present, is rather indefinite in its features, yet there cannot fail to attract his attention certain straws in the wind which indicate the general direction in the movement of events. Since the passage of the new United States tariff, two significant features have developed. Of great importance has been an interpretation of the tariff on print paper and pulp. This interpretation was given by the Treasury Department at the request of the collector of Customs at Ogdensburg, N.Y. Of almost equal importance, and in the end possibly of greater importance far, are the reports that several United States paper mills are making plans for disposing of their plants and moving over to Canada.

The interpretation of the tariff, given by the Treasury Department, puts print paper and pulp back practically to the old Dingley rates, because of alleged discrimination in Canada against the United States in the export of wood pulp and pulpwood. Under the retaliatory clauses of the tariff bill the duties on print paper from Ontario will be \$5.75 per ton, only 25 cents less than the Dingley rate. Print paper from Quebec will pay \$6.10 per ton, or 10 cents more than the Dingley rate. The rate on Ontario print paper is made up of the minimum duty of \$3.75 per ton and \$2 per ton under the retaliatory clause, because Ontario prohibits the export of pulpwood cut on Crown lands. The rate on Quebec print paper is made up of the \$3.75 minimum duty, the \$2 retaliatory duty as in the case of Ontario, and 35 cents a ton countervailing duty, to offset the 25 cents a cord refund of stumpage tax granted by the Quebec Government for pulpwood cut on Crown lands and manufactured into a finished product within the province. There is no doubt, according to this ruling, that the United States Government believe that they have a good chance of persuading Ontario and Quebec to permit the export of pulpwood. Only on such an assumption can one account for their course in attempting to penalize Canadians for protecting their own raw materials and their own industries.

If there were any real discrimination against the United States the situation would be easy to understand, but there is none. Ontario forbids the export of her logs to any country under the sun, the United States included. Quebec encourages home industry by rebating 25 cents per cord of the stumpage tax when the logs are put through Quebec mills. If they go to the mills of any other country, the United States included, the rebate is not given. All other countries are treated the same as the United States. There is no discrimination. It is a little more than unneighborly, therefore, for that country to inaugurate a tariff war and base it upon the pretence that Canadians are discriminating against them.

Canadians are minding their own business in this matter. They have their own resources to preserve and must do so irrespective of whether any one else is injured. The United States are in sore straits from the depletion of their raw materials, through nobody's fault but

their own. Now they are following further the policy which has led to this depletion and are taking measures which will deplete the country of many of its paper mills. Canadians have everything to win and nothing to lose in this matter. If United States tariffs force United States mills to migrate to Canada, they will be heartily welcomed. The pulpwood resources of Canada need capital for their conversion into paper, and United States capital will do the work as well as any other. Among the mills which are reported to have their eyes upon Canada, are the International Paper Company and the Berlin Mills, of New Hampshire. Some reports on high authority state that positive plans are

being laid for the disposal of water rights in the United States now employed for the making of news paper and that negotiations are being made for the erection of large plants in Canada. Canadians have no desire to appear vindictive in this matter, but they may be pardoned for saying "I told you so," if events continue to develop along present lines. Far from having the desired result, the United States tariff policy, if persisted in, will make news print paper more expensive in the United States, will close many United States mills, and will be a strong argument for the Dominion Government at its next session, when it takes up the question of placing an export duty upon pulpwood.

Fraternal Visit of Prominent Western Lumbermen to Ontario

A number of prominent British Columbia lumbermen attended the recent annual meeting of the Canadian Manufacturers' Association at Hamilton, and while in Ontario, visited also Toronto and Ottawa. The object of their eastern visit primarily was a fraternal one, as they wished to get into closer touch with the lumbermen of Eastern Canada and to learn at first hand of the work which the Canadian Lumbermen's Association is carrying out. As a result of the recent visit of the secretary of the Canadian Lumbermen's Association to the Pacific coast, the Association has secured a large number of new members in that part of Canada, and the probability is that a direct result of the visit of the western lumbermen to Ontario will be an increased interest in the Association.

The visitors from the West included Mr. John Hendry, president of the British Columbia Mills Timber & Trading Company, Vancouver; Mr. Otto Lachmund, of the Arrow Lakes Lumber Company, president of the Mountain Lumbermen's Association; Mr. D. C. Cameron, president of the Rat Portage Lumber Company, and Mr. R. H. H. Alexander, secretary of the British Columbia Lumber & Shingle Manufacturers, Limited. While in attendance at the Canadian Manufacturers' meeting at Hamilton the party were greatly gratified by the election of one of their number, Mr. John Hendry, to the position of president of the Association. An additional honor to the representatives of the lumber interests was the election of Mr. W. H. Rowley, of the E. B. Eddy Company, Hull, Que., to the position of vice-president of the Association. The visitors from the West were entertained to luncheon at the National

Club during their visit to Toronto. About twenty-five were in attendance at the luncheon, including, in addition to the guests, Mr. Gordon C. Edwards, Ottawa, president of the Canadian Lumbermen's Association, who occupied the chair; His Worship, Mayor Oliver; Mr. W. H. Rowley, Hull, Que.; Mr. Herman H. Hettler, Chicago; Mr. J. E. Walsh, manager of the transportation department of the Canadian Manufacturers' Association; Mr. W. D. Lummis, Toronto; W. B. McLean, Toronto; J. J. McFadden, Toronto; A. C. Manbert, Toronto; W. A. Firstbrook, Toronto; W. Charlton, Toronto; R. B. Elgie, Toronto; W. B. Tindall, Toronto; W. C. Laidlaw, Toronto; W. J. Bell, Spanish River Lumber Company; Ralph Loveland, Loveland & Stone, Cutler, Ont.; Dennis Murphy, Ottawa; R. G. Cameron, Ottawa, and the secretary of the Canadian Lumbermen's Association. An exceedingly pleasant time was spent during the luncheon and a general chat upon matters of interest was indulged in over the coffee.

There is no doubt that much good to the Canadian Lumbermen's Association will result from this visit. The British Columbia men exhibited a strong inclination to further its objects in every way possible and were strongly impressed by the value which the Association can be to lumbermen all over Canada, by taking up practical questions from the standpoint of the interests of the whole Dominion. One concrete result of the visit was the unanimous election of Mr. John Hendry, Mr. Otto Lachmund, Mr. D. C. Cameron, and Mr. A. D. McRae, president and general manager of the Fraser River Lumber Company, Fraser Mills, B.C., as directors of the Canadian Lumbermen's Association.

Canadian Manufacturers Approve of Prohibition of Pulpwood Export

During the meeting of the Canadian Manufacturers' Association in Hamilton on Sept. 14, 15, and 16, several matters of interest to lumbermen were taken up. Among these were the following resolutions by the pulp and lumber sections: "That the policy of the Quebec Government in prohibiting the export of logs and pulpwood from the Crown lands of the Province of Quebec is endorsed, and it is urged that action thereon be taken without delay so that the prohibition take effect as soon as possible.

"That the Association favor the prohibition of the export of logs and pulpwood from Canada, and respectfully request the Dominion Government to enact the necessary legislation to prohibit such export.

"That we appreciate and heartily approve of the beneficial action of the Dominion Government in establishing a permanent commission for the conservation of the natural resources of Canada, and urge that the local Governments of the various provinces be asked to assist and to co-operate in these matters, and also to provide effective protection against the destruction of the forests by fire."

Mr. W. K. McNaught, Toronto, objected to the proposal to exact a duty on pulpwood, on the ground that it would result in retaliatory measures which would seriously affect the industrial interests of Ontario. In this province, he said, they were dependent on the United States for their coal supply and if they started a war of duties they did not know where it would end, and they would probably get the worst of it. He was in sympathy with the desire of Quebec and the other provinces to conserve their resources, but in the interests of the people of Canada as a whole he believed that the imposition of an export duty should not be encouraged.

Mr. W. H. Rowley, Hull, Que., said the resolutions had been carefully considered by the pulp and paper and lumber section, and Quebec was simply proposing to follow the policy that had been adopted by the Ontario Government.

Mr. McNaught contended that the policy of the Ontario Government was altogether different from that proposed by Quebec.

Mr. Rowley thought that an export duty on pulpwood was the only means Canada had of obtaining a reciprocal arrangement with the United States.

The tariff committee in its report commended the proposal for an export duty on pulpwood from Crown lands in Quebec, and also favored the proposal that the Dominion Government should place an export duty on lumber.

The report of the Railway and Transportation Committee made special mention of the new bill of lading adopted by the Canadian railways after consideration of the matter before the Board of Railway Commissioners. The Board had heard the representations both of the transportation companies and of the shippers, and the bill of lading as adopted was agreed upon by all parties. This bill, which comes into effect on October 1st, the committee believed was equal, if not superior, to any in use. Referring to it the report of the committee said: "It defines the terms upon which a shipment is made, and will be of value in that the shipper will not be compelled to consult a lawyer to ascertain his rights in case of loss or damage. The general liability of the carrier is defined in a way that is thought fair to both carrier and shipper. The carrier is made responsible for all loss or damage not caused by the act of God, the King's or public enemies, or by the act of default of the shipper. The

railway's responsibility as carrier continues for 48 hours, or, in the case of bonded goods, 72 hours, after written notice of the arrival of the goods at destination has been sent or given.

"Instead of imposing upon the shipper the burden of proving the carrier's negligence, as is done at present, the new conditions impose upon the carrier the burden of proving its freedom from negligence, a very great advantage in settling claims. Then again, the carrier issuing the bill of lading, in addition to its other liabilities, is made liable for any loss, damage or injury to the goods from which the other carrier is not by the terms of the bill of lading relieved, caused by or resulting from the act, neglect, or default of any other carrier to which such goods may be delivered in Canada, or under a joint tariff, or over whose line or lines such goods may pass in Canada or under such joint tariff, the onus of proving that such loss was not so caused or did not so result being upon the carrier issuing a bill of lading. The importance of this clause cannot be overestimated."

The manner in which the railway companies had met the shippers was acknowledged, and the opinion expressed that the thanks of the shipping world were due to the committee who had successfully conserved their interests.

The Insurance Committee in its report dealt at some length with the matter of insurance in unlicensed companies doing business in Canada. Under a section of the Dominion Insurance Act of 1908, a tax of 15 per cent. on the net premiums had been placed upon this class of insurance. Inasmuch as many manufacturers, including lumbermen, have been insuring largely in the New England mutuals, this tax was greatly objected to. The situation was tersely put in a resolution presented by Mr. P. W. Ellis, Toronto, which was carried by an overwhelming majority. The resolution was as follows: "Whereas the Dominion Insurance Act, as passed by the Canadian House of Commons at the last session of Parliament, contained a clause providing for the furnishing of a return and the payment of a tax on all insurance placed with companies not registered in Canada; and whereas this is being followed by a movement on the part of the insurance companies forming the Canadian Fire Underwriters' Association to have legislation enacted which will make it

impossible for the insured in Canada to place insurance in unregistered companies; and whereas such legislation would prohibit the use by Canadian insurers of insurance by mutual and reciprocal underwriters, a class of insurance which for nearly half a century has rendered a unique service to the insured and to the country, both by thorough inspection and consequent low cost, and, moreover, such mutual and reciprocal insurance cannot be obtained in Canada, nor is it practicable under the present Dominion Insurance Act to organize offices which might supply it; and whereas such legislation would also prohibit the right of contract with other insurance companies and associations outside of Canada which accept insurance under conditions and advantages that cannot be obtained from companies registered in Canada—a class of insurance also largely used in Canada, and which, moreover, offers the only safeguard against exorbitant rates;

"Therefore, be it resolved, that the Canadian Manufacturers' Association, while recognizing always the principle of protection for Canadian industries, places itself on record as strongly opposed, under present circumstances and conditions to any legislation which would impair or prohibit the continued use by companies of the valued service rendered by such unregistered companies."

It is a sign full of encouragement for lumber manufacturers that the representatives of all other lines of manufacturing in Canada should take up so decidedly the work of educating the public and the governments as to the importance of protecting the timber resources of Canada against exploitation for the benefit of foreign mills. The lumber industry of Canada has had a great deal to contend with in the way of competition from foreign lumber, and it is a matter of plain justice that one of its important branches—the pulpwood industry—should be so protected as to prevent its raw materials being sold to foreign mills to enable them to compete with our own mills in the finished product. As to the bill of lading and the insurance questions, these affect every line of industry, but none more so than lumbering. Lumber manufacturers will therefore have been pleased to see the C.M.A. acting so successfully for the former and agitating so vigorously for their cause in the latter.

An Instructive Example of Practical Conservation of Resources

The man who creates a market for something which formerly went to waste ought to be classed alongside of the one who makes two blades of grass grow where formerly there was but one. We hear a great deal about conservation in the abstract and we have grown weary of hearing about it and seeing so little done. It seems like a breeze from the pines to a weary dweller in the city to hear of a man who is actually obtaining results. Capt. J. B. White, of Missouri, in a modest manner, at a recent convention told of some of the difficulties which he had faced in the matter of waste in lumber manufacturing. Capt. White has naturally been criticized by others as well as by himself for allowing so much to go to waste. He is able to justify himself, however, and to go a little further by showing what can be done when one perseveres.

"If the manufacturer of lumber," he says, "sells everything he can find a market for, or that he can by any human ingenuity provide a market for, he cannot be accused of ruthless waste in leaving in the woods or in sending to the burner as refuse that which has no commercial value. The fact that it would have commercial value as kindling wood, or for other purposes, if shipped to the large cities, does not change the situation if the cost of transportation is greater than the market value. I was led to believe in conservation as a great saving principle because I saw the great need of it in my own business. In the cutting and sawing of logs there was and is an unavoidable waste, which I was powerless to prevent; and in endeavoring to prevent it, I committed a greater waste, which, however, because of the principle involved, gave me back some compensation in the satisfaction that I was working along right lines which would eventually bring good results. It came in this way: My company was manufacturing yellow pine lumber, and because of there being no market for the lower grades, and never had been any market for the lower grades of yellow pine lumber, every manufacturer was obliged to leave his top logs, those that were limby and knotty, in the woods to rot or be burned by forest fires.

"I decided to try manufacturing No. 3 boards from a portion of

these logs, same as I had previously done in white pine. This was in 1890, and they netted me that year from \$1.50 per thousand to \$3.25 per thousand, and the bringing them in from the woods, sawing, stacking and shipping, cost me a loss of from \$3.75 to \$5.50 per thousand. My board of directors protested, but I justified myself by the belief that I would create a market for this cheap lumber, and I did, and in two years we got cost. In 1897 I put a still lower grade, a No. 4 board, on the market, and the first year got only \$2 per thousand for it, but in a few years I got the price up to 50 cents above cost. I then made lath and shingles out of yellow pine slabs and refuse, and in every conceivable way tried to market all waste."

Capt. White's experience should be studied by everyone in the lumber business, by manufacturers as well as by retailers and wholesalers. Manufacturers will welcome the day when they can turn their waste material into money. Wholesalers won't care a great deal one way or the other, but they will probably be pleased to see their field of activities widened. Retailers will in the end look at the matter from a common sense point of view. At present many retailers are reported to be taking objections to the proposal for the manufacture of odd lengths of lumber, as they do not think the public want them yet. The manufacturer of odd lengths may in the end be the salvation of their business. The public will certainly want odd lengths and low grades if they find that they are suitable as well as cheaper. When lumber stocks as they exist to-day become more expensive the public will buy less lumber unless something cheaper, and to all intents and purposes just as good, is found to take their places. Odd lengths and low grades will be utilized extensively before many of us are much older. Pioneers will have to make the market for them and there will not be much money in it for the pioneers, but fortunately, human nature is so arranged that there is always a certain percentage of men who are willing to accept virtue as its own reward, and who, like Capt. White, will be recompensed by the satisfaction of knowing that they are working along right lines.

Lumbermen Win in Freight Tariff Case

Railway Commission Orders Tariff Expert to Prepare New Freight Rates—Railways' Overcharges to be Refunded—Good Feeling Exhibited on Both Sides During Hearing

Ottawa, Sept. 21.—By the decision of the Board of Railway Commissioners of Canada delivered to-day, the Canadian Lumbermen's Association gets recognition of its contention that the railway companies were collecting substantially more under the revised tariff of a year ago than under the former one, though the companies always contended that the change was no more than a readjustment. The case is not finally disposed of. The Commission, after reaching the conclusion that the approximate amount of \$40,000 was collected under the new tariff in excess of what would be derived from the old one, submitted the whole matter to the Commission's own tariff expert, James Hardwell, for a report. He is instructed to adjust the railway schedules so that the inconsistencies of the old tariff will remain out and the tolls on lumbermen will not be any considerable amount greater. The Commission did not doubt that the railways had intended only to harmonize their tariff schedules. The important announcement was made that the railways would have to show ground for the large advances in export tolls. Chairman James P. Mabey remarked that it had not been shown that these should stand on any different footing from domestic rates.

Five hours were required for the hearing. The proceedings were of the greatest interest to lumbermen, as was evidenced by the number of them who attended the court. There were noticed; J. R. Booth, honorary president of the Lumbermen's Association, and his salesman, Walter Ross; Gordon C. Edwards, president of the Association; John Hendry, president of the Canadian Manufacturers' Association; W. H. Rowley, president of the E. B. Eddy Company; Peter Whelen, president of the Ottawa Board of Trade and manager of the Shepard & Morse Lumber Company; R. H. H. Alexander, secretary of the Pacific Coast Lumbermen's Association; D. C. Cameron, of Winnipeg; J. C. Brown, of Fraser & Company; John S. Gillies, of Braeside; V. R. Marshall, of the Brockville Lumber Company; Robert Cox, lumber exporter; E. R. Bremner, of Watson & Todd; R. G. Cameron, of Cameron & Company; M. Kinsella, of Skillings, Whitney & Barnes; C. B. Doherty, of the Rideau Lumber Company; W. H. Bromley, of the Pembroke Lumber Company; A. O. Anderson, of the James MacLaren Company; F. A. Filion and W. C. Hughson, of Gilmour & Hughson.

Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, who has been collecting data for the last year on the case, sat beside the lumbermen's solicitor, Mr. J. F. Orde, K.C., and supplied him with abundance of ammunition for the contest. The Canadian Manufacturers' Association and the Montreal Board of Trade, which recently joined in the application, left the active conduct of the fight to the lumbermen. The Grand Trunk Railway Company was represented by Mr. W. H. Biggar, K.C., and the Canadian Pacific Railway by Mr. E. W. Beatty. Mr. F. H. Phippen, K.C., appeared for the Canadian Northern, Quebec, but the lumbermen had no complaint against that company, chiefly on account of the proportionately small quantity of lumber the line handled. The railways were ably assisted by Mr. W. B. Bulling, assistant freight traffic manager of the C.P.R.

Of especial interest was the apparent cordial relation between the two opposing sides. The lumbermen accepted the figures of the railway companies as the basis on which they would fight out the case. The only departure from this was when Mr. Frank Hawkins found errors in the railway tables, including rates inserted that were not complained of and a few errors in extensions and additions. These for the G.T.R. amounted to \$738.98, or 15 per cent. on their estimated increase. The errors in the C.P.R. statement totalled \$306.73, or 4 per cent. When the mistakes were pointed out the companies readily accepted them.

The C.P.R. and G.T.R. submitted statements for June and September in 1908, and February and March in 1909. By multiplying the returns from these four months by three the conditions for the year were ascertained. The G.T.R. showed that of 5,400 cars shipped, half of them went to Montreal, Toronto or Hamilton, and the tolls on these were increased by \$2.75 per car. The other half went to sundry places, and on them there was a reduction of \$1.14 a car. When the chairman asked why this worked out to the disadvantage so much of the shipper, Mr. Bulling replied that it was the result of the adoption of the uniform scale and that some such scale was suggested by the Commission's expert officer. The increase on the G.T.R. domestic shipping was 47 cents per car, and on export \$3.98 per car. The total amount collected in the four months, over what would have been derived from the old tolls, was \$4,818 according to the company's reports. For convenience this was regarded as \$5,000, and multiplied by three gave a yearly gain of \$15,000.

The C.P.R. statement showed that to Montreal, Toronto and Hamilton there were shipped 1,522 cars, at an increase of \$3.49 per car, and

1,561 cars to other points, at an advance of 98 cents per car. The C.P.R. domestic shipping showed an increase of \$1.36 per car, and export, \$2.86 per car. The total increase amounted to \$8,157, which, when multiplied by three, gave approximately \$25,000.

The combined statement for the railways showed \$3.30 increase in export tariff and 96 cents in domestic. A very peculiar feature was that the G.T.R. shipments to the big centres of Montreal, Toronto and Hamilton should be so close to the percentage of the C.P.R. shipments, namely, 49.9 for the former and 49.4 for the latter.

The circumstance of the lumbermen accepting the figures offered by the companies greatly simplified proceedings. The applicants had abundance of material, but preferred to take the railways' statement.

There was apparent satisfaction on both the sides of the railway companies and the lumbermen when Chief Commissioner Mabey announced that the Board was prepared to dispose of the case.

"The present complaint had its origin," the Chief Commissioner began, "as far back as 1907, when objection was taken to the rates charged from the Georgian Bay district to Wingham as compared with the tariff to St. Thomas. Traffic officials then took under consideration provisions affecting the lumber rates between these and other points with a desire to harmonize the scale and eliminate all inconsistencies. After a year and a half the present tariff was evolved.

"We commence with the shippers saying the results of the revision have been to materially increase tolls. At the inception of the inquiry issue was taken by the companies, and their counsel said the revision had no such effect. They contended that an increase in tolls was not intended, but that the whole endeavor was to eliminate incongruities and that this was the result. Then the shippers began to produce individual records showing that they had to pay more under the new tolls than under the tariff these replaced.

"It was next arranged that the railway companies should produce records. No complaint was made, nor can be made, with the desire of the railway officials to remove anomalies and absurdities from the tariffs. They were entitled, and indeed bound, to do that. But when the objectionable features were removed some consumers got a benefit from the operation and others suffered. Still it was the desire of the railway people that all should be treated alike. With the object that led to this work the Board is in entire sympathy.

"The presentation of extracts from the companies' books shows that between certain points there have been increases. Out of 5,400 cars about 2,700, or half, in round numbers were sent to Montreal, Toronto and Hamilton. The tolls on these were increased by \$2.75. On the other 2,700 there was a reduction of \$1.14 a car. The broad view in this would lead to the conclusion that very low scale charges had grown in use to Montreal, Toronto and Hamilton, and this conclusion has not been disputed. Those who prepared the revised tariff had then, when the operation of scaling was applied, to lower to the basis in vogue to Montreal, Toronto and Hamilton or else it was imperative that these rates should be scaled up.

"I confess that feature gave me a lot of difficulty. Was it possible to eliminate these objectionable features of the old tariff and preserve to the railway companies their revenue? We have not been able to say. After our tariff expert comes to the conclusion that a tariff can be built up that will be fair to the consumers and be free from the blemishes of the old one, such tariff must be put in effect. We are of the opinion that the receipts which flowed into the coffers of the railway companies as a result of the increased rates are not inconsiderable. The G.T.R. admits an advance of approximately \$15,000 from the year's operations under the revised tariff. The increased earnings of the C.P.R. are \$25,000. This \$40,000 seems to us a considerable increase on one item. It is a million dollars capitalized at 4 per cent. A proportionate amount on all other large items would render an extremely large increase to the companies. We are not able to say this is not a matter of importance.

"But we do unhesitatingly accept the statement that the gentlemen who prepared this new tariff had no intention of effecting an increase. We are satisfied they desired only to harmonize conditions and that there was no devious motive. At the same time there is the result. If a tariff can be prepared that will avoid this result, it must be prepared and put into effect. In working out the new tariff there may be still an increase, but the Board would not consider such a sum as \$3,000, \$4,000, or \$5,000, as affecting the result materially. These amounts the Board would permit. It is not our desire that the tariff should be decreased.

We would sanction a slight increase rather than a cutting, so that it will be understood the companies' revenues must be maintained."

Chairman Mabey concluded with a reminder that the export rates charged by any companies were not to be increased without giving sufficient reason for doing so. He condemned the action of the railway company in raising the export rate from Ottawa to Montreal from four to five cents per 100 pounds, and similarly for adding $2\frac{1}{2}$ cents to the export rate from Georgian Bay points to Montreal.

"We are not able," said the chairman, "to accept the proposition that export traffic stands on any other footing than domestic. Where a

carrier has established an export rate he is not at liberty to withdraw it or increase it without showing proper ground for the course. The decisions of the Interstate Commerce Commission compel us to this view. The railway companies shall have an opportunity of developing this branch of the case and give the history of the export rates.

"The matter now goes to Mr. James Hardwell, tariff expert for the Commission, to deal with. The understanding is the same as when the case was last up—the shippers get the benefit of any reduction in the tolls and all increases collected must be refunded."

Commissioners Scott and MacLean acted with Judge Mabey.

Good Prices Secured for Ontario Timber

Government Sale by Tender Results in Some New High Records—Berths Sold in Thunder Bay, Rainy River, Kenora, Sudbury and Algoma—Details of Results

The sale by tender of pine, tie and other timber recently conducted by the Ontario Government resulted in 51 berths being disposed of, comprising an area of 1,425 square miles, in the districts of Thunder Bay, Kenora, Rainy River, Sudbury and Algoma.

The licenses for the berths are for five years and will expire on April 30, 1915. In addition to paying for the timber cut, the licensees must also pay a ground rental of \$5 a square mile and their lumber must be manufactured in Canada.

Thunder Bay District.

F. P. 12—To Thos. Falls, Port Arthur; jack pine, spruce and tamarac, \$2 per thousand feet; $3\frac{1}{2}$ cents per tie.

F. P. 14—To Ray Bell, Port Arthur; jack, spruce and tamarac, \$2; ties at $3\frac{1}{2}$ cents.

F. P. 15—To James A. Stewart, Port Arthur; jack and tamarac, \$2; ties, 2 cents.

W. 4—To Ray Bell, Port Arthur; jack, \$2; ties, 3 cents.

W. 5—To James Stewart; jack and tamarac, \$3; ties, 4 cents.

H. B. 1—To J. and C. Greer, Port Arthur; red and white, \$3; ties 2 cents.

H. B. 2—To J. and C. Greer; jack, \$3; ties, 2 cents.

H. B. 2—To J. and C. Greer; all pine, \$4; ties, 2 cents.

L. 1—To F. S. Wyley, Port Arthur; all pine, \$4.10; ties, 6 cents.

L. 2—To F. S. Wyley, all timber, \$7.10; ties, 6 cents.

L. 3—To John Whalen, Port Arthur; white pine, \$6.25; red, \$5.25; jack, \$3.50; ties, 7 cents.

Block 5—To Austin & Nicholson, Sudbury; red and white pine, \$6.10; jack, \$5.10; ties, 7 cents.

H. S. 1,000—To H. A. Whalen; all timber, \$4; ties, $5\frac{1}{2}$ cents.

H. S. 1,002—To H. A. Whalen; all timber, \$4; ties, $5\frac{1}{2}$ cents.

Mining locations in the Township of Strange—To Mackie & Taylor; tamarac and jack, \$3; ties, 4 cents.

District of Kenora.

A.—To A. Bishop & Company, Port Arthur; pine, \$7.60; jack and spruce, \$5; ties, 7 cents.

B. G. 1—To Rat Portage Lumber Company; red and white pine, \$3; jack, tamarac and spruce, \$2; ties, 4 cents.

B. G. 3—To Keewatin Lumber Company; white and red pine, \$4; spruce, tamarac and jack, \$2.50; ties, $9\frac{3}{4}$ cents.

B. G. 4—To Keewatin Lumber Company; red and white, \$4; spruce, tamarac and jack, \$2; ties, $7\frac{3}{4}$ cents.

B. G. 6—To Rat Portage Lumber Company; red and white, \$3.10; jack, \$2; ties, 4 cents.

B. G. 9—To Keewatin Lumber Company; red and white, \$2.75; jack, \$1; ties, 2 cents.

S. 1—Rat Portage Lumber Company; pine, \$4; spruce and tamarac, \$2; ties, 3 cents.

S. 24—To Rainy River Lumber Company; red and white, \$4; jack, \$2; ties, $6\frac{3}{4}$ cents.

S. 24a—To J. W. Shortt, Kenora; red and white, \$5.50; jack, \$4; tamarac, \$4.50; ties, 4 cents.

S. 28e—To Ernest Appleton, Rainy River; pine, \$8.50; tamarac and jack, \$6.50; spruce, \$5.50; ties, 5 cents.

S. 28w—To Ernest Appleton; pine, \$8.50; tamarac and jack, \$6.50; spruce, \$5; ties, 5 cents.

S. 41—To G. T. Lovering; white pine, \$10; red, \$7; jack, \$4; ties, 6 cents.

S. 42—To G. T. Lovering; white pine, \$9; red, \$6; jack, \$3; ties, 3 cents.

S. 43—To P. P. Elliott, Fort Frances; pine, \$5.75; jack, \$4.75; ties, $5\frac{1}{2}$ cents.

Rainy River District.

G. 30n—To Rat Portage Lumber Company; pine, \$4.05; spruce, tamarac and jack, \$2.60; ties, $5\frac{1}{2}$ cents.

G. 30s—To Rat Portage Lumber Company; pine, \$4.05; spruce, tamarac and jack, \$2.50; ties, $5\frac{1}{2}$ cents.

G. 32w—To J. W. Shortt, Kenora; red and white pine, \$4.75; jack, \$3.50; tamarac, \$3.70; spruce, \$3; ties, $2\frac{1}{2}$ cents.

G. 34—To Lockhart & Company, Fort Frances; red and white pine, \$5.50; jack, tamarac and spruce, \$4; ties, 5 cents.

Sand Point Island, Rainy Lake—To Fort Frances Lumber Company; white pine, \$10.70; jack, \$6; spruce, \$6; tamarac and cedar, \$7; ties, 9 cents.

G. 70—To Northern Construction Company; pine, \$8.15; jack and other timber, \$6; ties, $5\frac{1}{2}$ cents.

G. 72—To Fort Frances Lumber Company; pine, \$8.70; jack, \$5; spruce, \$4; tamarac, \$5.50; ties, 5 cents.

G. 73—To Northern Construction Company; pine, \$8.15; jack, \$6; ties, $5\frac{1}{2}$ cents.

G. 74—To Northern Construction Company; pine, \$8.15; jack, \$6 ties, $5\frac{1}{2}$ cents.

G. 75—To Northern Construction Company; pine, \$8.15; jack, \$6; ties, $5\frac{1}{2}$ cents.

G. 76—To Shelvin, Clark & Company, Rainy River; all timber, \$5.55; ties, 2 cents.

G. 77—To Northern Construction Company; pine, \$8.15; jack, \$6; ties, $5\frac{1}{2}$ cents.

G. 78—To P. P. Elliott, Fort Frances; pine, \$6.35; jack, \$4.25; tamarac, \$4.50; ties, 7 cents.

G. 79—To P. P. Elliott; pine, \$10.05; jack, \$7.10; tamarac, \$7.05; ties, $9\frac{1}{4}$ cents.

G. 80—To Rat Portage Lumber Company; pine, \$4; tamarac and jack, \$2.50; ties, 5 cents.

Berth 6—To W. J. Elliott, Thunder Bay; white and red, \$6.80; jack, \$4.55; ties, 7 cents.

Berth 7—To P. P. Elliott; pine, \$7.50; jack, \$5.55; ties, 7 cents.

Berth 8—To Fort Frances Lumber Company; white and red pine, \$9.30; jack, \$5; tamarac, \$6; ties, 8 cents.

Sudbury District.

Block 1—To Austin & Nicholson, Sudbury; red and white pine, \$6.10; jack, \$5.10; ties, 7 cents.

Block 2—To Austin & Nicholson; red and white, \$5.10; jack, \$4.10; ties, $5\frac{1}{2}$ cents.

Algoma District.

Block 3—To Austin & Nicholson; red and white pine, \$5.10; jack, \$4.10; ties, $5\frac{1}{2}$ cents.

Block 4—To Austin & Nicholson; red and white, \$5.60; jack, \$4.60; ties, 6 cents.

Mississauga Forest Reserve.

The sale of timber in the Mississauga forest reserve resulted in six out of eight berths offered, being disposed of at good prices. The following sales were made:

Berth E, south half—James Munro, Pembroke; red pine, jack pine and spruce, \$8.55 per M.

North half—Booth & Shannon, Biscotasing; white pine, \$5.20; red pine, \$3.

Berth 1, north half—W. B. Russell, Toronto; white pine, \$10.55; red pine, jack pine and spruce, \$8.55 per M.

South half—Richard Fair; white pine, \$11.37; red, jack pine and spruce, \$8.55.

Berth J, north half—Booth & Shannon; white, \$5.10; red, \$3; jack pine and spruce, \$1.

South half—J. G. Forgie, Pembroke; white, \$10.55; red pine, jack, pine and spruce, \$8.55.

The north and south halves of Berth F were not sold.

PLANT GEORGE GORDON AND CACHE BAY

The above illustration will convey to our readers some idea of the immensity of the plant of George Gordon & Company, Limited, lumber manufacturers, Cache Bay, Ont. Until the first of September, 1909, this business was conducted by George Gordon & Company, Mr. George Gordon, M.P., having associated with him his brother, Mr. Robert W. Gordon and Mr. Robert Booth, of Pembroke, Ont. The new limited company, which took over the business on September 1st, has an authorized capital of \$750,000, and was made up by the amalgamation of George Gordon & Company and the Cache Bay Lumber Company, Limited.

The standing timber controlled by the new company will exceed two hundred millions in red and white pine. The limits on the Sturgeon river are the townships of Kelly and Davis; part of the township of Scadding, and berths 1 and 3 of McCarthy township. The limits on the Veuve river and its tributary waters are the townships of Awrey and Burwash, and part of the township of Hagar; and on Lake Nipissing the townships of Bertram and Latchford. The logs are driven down the Sturgeon and Veuve rivers, the former emptying into Lake Nipissing four miles east of the mill, and the latter about three miles west of the mill, being towed to the mill from the mouths of these rivers.

The lumber yard covers an area of 45 acres, and presents an imposing sight either from the water or from the main line of the Canadian Pacific Railway, which passes close by. The sawmill, which is modern in every respect, has a daily capacity of one hundred and ninety thousand feet of red and white pine lumber, and sixty-five thousand pieces of lath, besides pickets and box boards. The lumber from the mill is handled by a steam locomotive and high cars. There are between seven and eight miles of standard track in the yards.

A detailed description of the entire manufacturing plant will prove interesting to all engaged in the sawmill industry.

The boiler house, 42 x 50 feet, is equipped with six slide valve engines, made by the William Hamilton Company, Limited; two Waterous and four Butterfield & Dymont boilers; four Waterous steam pumps, two being for fire purposes and one for the boilers.

The sawmill proper is 150 feet long, the rear end 83 feet wide and the front 120 feet. The section containing the sorting table and trimmers adjoins the front section of the mill, and is 21 x 210 feet. The mill is equipped with one William Hamilton circular saw; one Wickes Bros.

gang; one Waterous, and one William Hamilton double-cut band mill, each equipped with steam feeds and setts; two setts of William Hamilton trimmers; two setts Waterous overhead slash saws; one Waterous and one William Hamilton lath mill; a Waterous and a William Hamilton edger.

The filing room at the top of the mill has a complete outfit of Covell filing room machinery.

A fine refuse burner, 30 x 110 feet, was erected at the mill this season.

The planing mill, 60 x 84 feet, is supplied with a full complement

Geo. Gordon & Company, Limited

OF COMPANY, LIMITED , ONT.

of modern machinery. The power is supplied by a 70 h.p. St. Paul engine, and the plant consists of one McGregor Gourlay shaper; one S. A. Woods Machine Company's 8-inch sticker; one Hespeler Machinery Company's 12-inch sticker; one S. A. Woods rip saw; one Berlin Machine Works' rip saw; one Connell & Dengler re-saw; one Berlin No. 52 matcher; one Berlin 30-inch surfacer; one S. A. Woods railroad cut-off saw; one Chatanooga boring machine for boring telephone cross arms.

The planing mill produces all kinds of dressed lumber, including flooring, ceiling, mouldings, siding, and telephone cross arms, which are furnished painted or unpainted.

The electric lighting for the entire place is supplied from the company's own lighting plant.

Mr. George Gordon, M.P. for the electoral district of Nipissing, is the general manager of this important industry. Mr. Gordon was born at Pakenham in 1865, and a few years later moved with his father to Pembroke, where he was educated in the Public and High schools. He chose lumbering as his life's occupation, and at the early age of sixteen started on his career. The next ten years found him with Messrs. Booth & Gordon, on the Kippewa. He then spent two years as a logging contractor for Messrs. John R. Booth and Robert Booth, and the subsequent four years he was with the late J. W. Munro, of Pembroke, two of which were spent in Bay City, Mich., superintending the cutting of the logs. Soon afterwards he associated himself with Messrs. Robert Booth and R. W. Gordon in the firm of George Gordon & Company, at Cache Bay, with which business he has ever since been identified.

In the Dominion election contest of 1904 Mr. Gordon was selected as the standard bearer for the Conservative party in Nipissing, but was defeated by Mr. C. A. McCool. In 1908, however, Mr. Gordon was again unanimously selected to contest the riding, and was successful in being returned to Parliament by defeating Mr. McCool in a spirited contest.

In addition to his large interests at Cache Bay, Mr. Gordon is also director of the following companies, Cache Bay Lumber Company, Limited, the Lovering Lumber Company, Limited, of Toronto; the Temagami Lumber Company, Limited, of Orillia; the Strong Lumber Company, Limited, of Orillia; the A. J. Young Company, Limited, wholesale grocers and provision merchants, of North Bay and Sudbury; Cochrane Hardware Company, Limited, Sudbury; the Gordon Development Company, Limited, of British Columbia; and a stockholder in the Cavanish Lumber Company, Limited, of Lakefield.

Associated with the new firm of George Gordon & Company, Limited, are some of the foremost lumbermen of Canada and the United States. The officers are: Mr. George Gordon, M.P., president and general manager; Mr. Thos. F. Strong, Ogdensburg, N.Y., vice-president; Mr. Henry J. Bartlett, of Orillia, treasurer, and Messrs. Robert Booth, Pembroke; R. W. Gordon, Pembroke, and J. D. McLaurin, of New York, directors.

Mr. Thomas F. Strong, of Ogdensburg, N.Y., vice-president of the company, is a captain in the lumber industry across the border. Mr. Strong was born in that great lumber centre, Cincinnati, Ohio, in 1856,

Robert J. Booth, Pembroke, Director Geo. Gordon & Company, Limited.

R. W. Gordon, Pembroke, Director Geo. Gordon & Company, Limited.

The Saw Mill—Geo. Gordon & Company, Limited, Cache Bay, Ont.

and has spent most of his life, over 34 years, with the Skillings, Whitney & Barnes Lumber Company, at Ogdensburg. Since Mr. Tibbetts' death, in 1908, he has been general manager of the company, the executive committee of the board of directors being: Mr. Thomas F. Strong, general manager, Ogdensburg, N.Y.; Mr. James D. McLaurin, treasurer, New York; Mr. Henry J. Bartlett, Canadian general manager, Orillia, Ont. The Skillings, Whitney & Barnes Lumber Company commenced business in Ogdensburg, N.Y., in 1856, and is therefore one of the very few companies which have been in existence over fifty years.

Outside of the Skillings and Gordon companies, Mr. Strong is con-

nected with the following business concerns: President of the Marine Transportation Company, Ogdensburg, N.Y.; director of the Campbell-McLaurin Lumber Company, Montreal; vice-president of the Cavendish Lumber Company, Limited, Lakefield, Ont.; director of the Temagami Lumber Company, Orillia, Ont.; president of the Strong Lumber Company, Orillia, Ont.

Mr. H. J. Bartlett, of Orillia, treasurer of George Gordon & Company, Limited, is another busy man in the lumber world. He is director and Canadian manager of the Skillings, Whitney & Barnes Lumber Company; vice-president of the Lovering Lumber Company, Limited; mana-

Interior of Saw Mill—Geo. Gordon & Company, Limited, Cache Bay, Ont.

The Planing Mill—Geo. Gordon & Company, Limited, Cache Bay, Ont.

ger of the Strong Lumber Company, Limited; treasurer of the Cavendish Lumber Company, Limited, and treasurer of the Temagami Lumber Company. The fact that Mr. Bartlett is slated for so many treasurer ships would indicate that those associated with him have supreme confidence in his financial ability.

James D. McLaurin, of New York, treasurer of the Skillings, Whitney & Barnes Lumber Company, is one of the many brainy and enterprising Canadians occupying high positions in the industrial life of the American Republic. Mr. McLaurin began business with McLaurin & Blackburn, of East Templeton, Que., in 1877. Three years later he joined the Skillings, Whitney & Barnes Lumber Company. He spent seven years in the Burlington branch, and three years in Boston. In 1890 he went to the New York office as manager, and has since been appointed director of the company, and treasurer of the corporation. That he has very extensive interests is shown in his connection with the fol-

lowing companies: Director of George Gordon & Company, Limited; stockholder in the Strong Lumber Company; director of the Cavendish Lumber Company; stockholder in the Temagami Lumber Company; vice-president of the Campbell-McLaurin Lumber Company; and director of the Marine Transportation Company, of Ogdensburg, N.Y.

Mr. R. W. Gordon, of Pembroke, in addition to being a director of this company, is largely interested in industrial and mining enterprises throughout the country. He is secretary-treasurer of the Colonial Lumber Company, Pembroke; director of the Pembroke Milling Company; vice-president of A. J. Young, Limited, of North Bay and Sudbury; director of the Excelsior Life Insurance Company, Toronto; second vice-president of the Cobalt Silver Queen Mining Company; president of the National Cobalt Mining Company; and director of the Pembroke Southern Railway, which is now under control of the Grand Trunk Railway.

The company is fortunate in having as one of its directors Mr. Robert

M. P. Kinsella, Ottawa, a Stockholder in Geo. Gordon & Company, Limited.

Booth, of Pembroke, a pioneer among Canadian lumbermen. His friends say of him that when it comes to knowing the history of the lumber industry in Canada, Mr. Booth is a veritable encyclopædia. He seems to know almost every foot of timber land between Ottawa and the Soo, and coupled with this knowledge he is a shrewd and far-seeing financier. Mr. Booth was born about seventy years ago in the Eastern Townships, Quebec province. For forty years he served as superintendent for Mr. John R. Booth, of Ottawa, during which time the foundations for the

large and prosperous enterprise at the Chaudiere Falls were securely laid. In addition to being a director of George Gordon & Company, Limited, Mr. Booth is also president of A. J. Young, Limited, wholesale grocers, of North Bay and Sudbury; senior partner of Booth & Shannon, lumber manufacturers, Biscotasing; of the Larchwood Lumber Company, Larchwood; and of Booth & Ostrom, Pembroke; director of the Temagami Lumber Company; Cache Bay Lumber Company, Limited; Strong Lumber Company, Limited; shareholder in the Cavendish Lumber Com-

View in the Lumber Yards—Geo. Gordon & Company, Limited, Cache Bay, Ont.

pany, Limited, and a director of the Gordon Development Company, Limited, of British Columbia.

Mr. M. P. Kinsella, of Ottawa, is manager of the Ottawa branch of the Skillings, Whitney & Barnes Lumber Company. He is also a stockholder in George Gordon & Company, Limited; the Strong Lumber Company, Limited, and the Cavendish Lumber Company, Limited.

Mr. George A. Swayze, wholesale lumberman, of New York, has large lumber and financial interests. He has been in the lumber business for the past 22 years, during 14 of which he has been connected with the Skillings, Whitney & Barnes Lumber Company, of which he is now the export agent; he is a leading stockholder in George Gordon & Company, Limited; trustee of the Middletown Savings Bank, of Middletown, N.Y.; and he is also prominently identified with the Empire Trust Company, 42 Broadway, New York.

Cache Bay, where the mill, yards, offices and general store of George Gordon & Company, Limited, are situated, is a town of about 1,400 inhabitants, on the main line of the Canadian Pacific Railway, 26 miles west of North Bay, in the District of Nipissing. The name of the place was derived from Cache (French), which means hidden. This bay is an arm of Lake Nipissing extending in about six miles from the lake, and is the best and safest harbor on the lake.

Setting and Balancing Knives.

One who has had occasion to set the knives on a cutter-head will be surprised at the many ways in which they can be set wrong.

I saw, recently, a man "cutting and trying" with dividers on a machine. As soon as they are slightly worn the adjustable bed planers get so much lost motion that the index is not reliable. The most satisfactory and quickest way is to have a templet precisely one inch thick. Lay this on the bed-plate, and set each knife by bringing it down on the templet. With the index set at one inch the space will be true for one inch and for other spaces above and below.

Along with the setting comes the insistent problem of "balancing," and here we find something that is obvious, that can be proved by mathematics, and yet is not true. Knives of equal weight at rest would seem to be of equal weight in motion, but they are not.

If you will see that your knives are of equal weight by the balances, then of equal dimension in every part, you will have a smooth motion that will give a good surface, prevent hot boxes and prolong the life of your mill.—Exchange.

The best time for fighting a forest fire is at evening or in the early morning. During the middle of the day while the sun is high, and more or less wind prevails, the men work at a disadvantage, and as a rule cannot accomplish much in the way of checking the spread of the flames. But at nightfall when the air is still, and in the early morning before sunrise, when the ground and vegetation are damp with dew, the fires burn slowly, and make little or no progress. If attacked vigorously then the flames can be easily controlled along the outer edges of the burned area, and the fire thus prevented from spreading. For this reason the more intelligent and efficient fire wardens keep their men on duty day and night, and do not allow them to leave the place. Blankets and food are sent into them, and so no valuable time is lost in going to distant boarding houses for meals or lodging.

Hoo-Hoo Abolishes Use of Intoxicants.

One of the most important events at the recent annual meeting of Hoo-Hoo at Hot Springs, Ark., was the passage of a resolution to the effect that in future no person under the influence of liquor shall be eligible as a candidate for admission to Hoo-Hoo, and that intoxicating liquors should not be dispensed during the exercises or at subsequent sessions "on the roof." This step has been under consideration for several years and has been favored and promoted by business men, who believe that it will result in much benefit to the order. The endeavor of those responsible for the movement, is to place the order high above all possibility of reproach. The order will gain in dignity and usefulness by this move. It will gain in membership and its objects and ideals are certain to be benefitted.

A Shanghai report to the Canadian Trade and Commerce Department states that railway sleepers are in great demand, but hitherto the Chinese have demanded hardwood, and a very large quantity has been received from Australia. But if cedar, spruce or tamarack could be laid down in China at reasonable rates, a good market can be established, as well as for telegraph poles to order. One of the great disadvantages of doing trade with China is that they insist on seeing the article itself and make up their minds accordingly. The shipper should have a good reliable firm in China to represent him, with a good warehouse, or as it is called in China Godown accommodation.

Seven hundred billion matches a year are consumed by smokers in America.

Miscellaneous Statistics of the Lumber Trade.

Imports of manufactured and unmanufactured wood from Canada to British South Africa amounted in value in 1908 to £24,720, against £35,881 in 1907, a decrease of £11,161.

During the year ending March 31, 1909, Trinidad and Tobago imported timber valued at £45,014, of which the United States' share was £32,425, and Canada's £6,724. In the previous year the imports from Canada were valued at £9,385.

Imports of wood into South Africa for the five months ending May 31, during 1908 and 1909, were as follows:

Wood ceiling and flooring	£58,395	£53,912
Wood (planed and grooved)	37,676	37,947
Wood (manufactured)	88,993	77,733

Exports of forest products from Canada during July, 1909, amounted in value as follows:

Exports	July.	7 Months.
1909	\$5,935,277	\$20,901,088
1908	4,841,209	18,293,238
1907	5,896,013	20,768,205

The lumber trade of the British West Indies, British Guiana and Bermuda, as shown in the latest customs returns, amounted to 139,702 pounds. Shingles, hoops, shooks and staves, puncheons and casks were included under this head. Of spruce, white pine and hemlock, the importation from Canada was greater than from the United States by 12,789 pounds; the amounts from each country being 41,931 pounds and 29,142 pounds, respectively.

The apple barrel trade is reported slow at Chatham, Ont. A representative of the Sutherland-Innes Company, Limited, reports that, "the fall trade is not opening up as well as expected, the demand for apple barrel stock being comparatively light. The general trade throughout the country, however, has improved considerably, and we believe it will continue to improve for the balance of the year."

Imports of forest products into Canada during July, 1909, were valued at \$708,300, and for the four months ending with July, at \$2,774,216.

In some instances, in the United States, Canada, Sweden and Norway, pulp wood production has really been established as an adjunct to lumbering and sawmill operations rather than as a separate industry. This has been found an especially satisfactory system in Finland, where within the past two or three years several new pulp mills have been erected with the primary object of utilizing the waste material of the sawmills. The principle involved is capable of indefinite extension.—The World's Paper Trade Review.

Publications.

"Hardwood Record," of Chicago, has published an attractive book entitled "Oak Flooring," being an outline of correct methods of manufacturing, handling, laying and finishing, with an analysis of widths, thicknesses and grades. The book is daintily prepared, with a half-tone illustration upon the front cover, and tinted art paper for the text. The author is Mr. Henry H. Gibson, editor of "Hardwood Record," who is to be commended for having included so much useful information within so small a compass. The leading oak manufacturers of the United States have approved the book and purchased 10,000 copies, which will be distributed free of charge. Anyone wishing for a copy can obtain it by addressing the Book Department, "Hardwood Record," 355 Dearborn street, Chicago, and enclosing 10 cents in 2-cent postage stamps.

Wm. Rider & Son, Limited, 164 Aldergate street, London, E.C., publishers of the "Timber Trades Journal," have favored the "Canada Lumberman" with a copy of the latest edition of their "List of Shipping Marks on Sawn and Planed Timber." The list is published in book form and is arranged in good systematic order so as to be of the utmost service. The Canadian and American section has been enlarged and the book has been carefully revised and corrected throughout. The "List" is notable for its completeness, which has been made possible only by securing information from all shippers, agents and others. In addition to a list of marks, the book contains a list of agents and brokers in the United Kingdom, the Continent and colonies, for shippers of wood goods, an index to the shippers and their agents, and a number of useful maps and charts of timber ports and loading places on the Continent.

A United States lumber journal soliloquizing upon the result of the long tariff campaign says: "It now looks very much as though lumbermen must more actively interest themselves in legislation and the administration of public affairs, if they are to escape the continued enactment of obnoxious and harmful legislation either at Washington or their own State capitals."

Canadian Snark of the Universe

**W. A. Hadley of Chatham, Ont., Unanimously
Elected by Hoo-Hoo—A Well-Deserved Honor**

The election of W. A. Hadley, of Chatham, Ont., to the position of Snark of the Universe, by a unanimous vote, at the recent meeting of Hoo-Hoo in Hot Springs, Ark., was an honor to Mr. Hadley which he well deserved and which he will carry with credit. Mr. Hadley was elected Bojum of the Supreme Nine at the meeting held at Atlantic City, N.J., and Senior Hoo-Hoo in 1908 at Chicago. He had previously been honored in his own territory with the position of Vicegerent Snark for Eastern Canada, in which position he gave most satisfactory service to the interests of the Order. In his new position he will enlarge the sphere of influence of Hoo-Hoo in Canada, and it is felt that he is just the man for the place at this period of the Order's growth in Canadian territory.

W. A. Hadley was born in Chatham, Ont., on the 28th of July, 1868, it being recorded that he first saw the light where the factory of the S. A. Hadley Lumber Company has its present domicile. Sylvester Hadley, his father, was born at Pickering, Ont., and his mother was born in historic Inverness, Scotland. The father was one of the early settlers in Chatham, founding the first lumber business in the town. W. A. Hadley, the subject of our sketch, was educated in the public and high schools of Chatham, and determined to be a lawyer, taking up the study with a view to following the profession. Subsequently he changed

W. A. Hadley, Chatham, Ont., Snark of the Universe.

his mind and entered his father's office, settling down to the lumber business and mastering it in all of its details. His father died in November, 1892, and a joint stock company was formed to carry on the business, under the name of the S. A. Hadley Lumber Company, Limited, Mr. W. A. Hadley being elected secretary and treasurer of the company. His two brothers, Joseph and Charles Hadley, are also identified with him in the conduct of its affairs. The company do a large wholesale business, and are also manufacturers of interior finish and fixtures with a growing trade in all parts of Canada, and with the products of their factories to be found in every province.

W. A. Hadley is an Odd-Fellow and a Mason, in addition to being a Hoo-Hoo. Several years ago he was elected a member of the Board of Trade. He is a married man, his wife being the daughter of Simon Fraser, deceased, one of the best known lumbermen of Ontario. Mr. and Mrs. Hadley have two sons, and the new Snark of the Universe is proud of his promising offspring. The Hoo-Hoo of Canada are proud of the honor conferred upon Mr. Hadley, and feel that he will give a fine account of his stewardship as the head of the Order.

The proceedings which led to the election of Mr. Hadley as Snark of the Universe were opened by A. C. Ramsey, on behalf of the State of Arkansas, who when called upon to present that State's candidate for the office, said:

"Speaking for Arkansas proper, we have no candidate. As far as Hoo-Hoo is concerned we have a candidate, a man of the North. This gentleman needs no introduction from Hoo-Hoo. He is a worker in the ranks, a member of the Supreme Nine and eminently fitted for the office to which we are about to nominate him. I desire to place in nomination

for the office of Supreme Snark of the Universe William A. Hadley, of Chatham, Ontario.

Mr. Harry J. Miller, representing the State of Washington, seconded the nomination and paid a high tribute to Mr. Hadley's character. The nominations were then closed by unanimous vote and Mr. Hadley declared elected.

After being escorted to the chair, Mr. Hadley said: "To say that this is the proudest moment of my life would not be expressing what I feel from the bottom of my heart. I have not the words at my command to thank you for the great honor that you have conferred upon me to-day. It makes me feel that there is in this life something in the brotherhood of man that appeals to all of us and in this world there is nothing more that we can accomplish than making true and lasting friends, and I hope I have made friends of all whom I have had the honor and pleasure of meeting at the several annual meetings that I have attended. I do not know that I can come up to so many good qualities that have been mentioned by my mover and seconder just at this moment, but I can say this: That this order will have during the next twelve months the very best of my feeble efforts toward promoting its continued success and prosperity.

I want just now, while on my feet, to tell you something that has been very dear to my heart ever since I have had the pleasure of attending any annual meetings, and that is this: That I have always wanted to have the privilege of extending an invitation to the members of this great order to hold at least one of their annual meetings in Canada, but up until a few days before I left home I did not know how this could be brought about, but I am pleased to tell you that I have had some correspondence with brethren of Winnipeg and they have asked me to tell you that they hope to hold in 1912 an International World's Fair. This proposition is having the hearty support of all the lumbermen, not only in the Canadian Northwest, but of British Columbia, where there are a great many members of this order. They expect to have one week during this world's Fair for a lumbermen's week and they desire me to intimate to you that at the proper time an invitation will be forthcoming to this order that the annual meeting be held in that great city in 1912. Perhaps you do not know—all of you—that Winnipeg in Canada is considered the Chicago of the Northwest. It is the gateway of magnificent progress in making such rapid strides in upbuilding the great nation we hope to have in the not very distant future. I do not want to take up too much of your time, but simply to say that from the very bottom of my heart I thank you."

The complete list of officers elected was as follows: Snark, W. A. Hadley, Chatham, Ont.; Senior Hoo-Hoo, Geo. W. Hoag, Spokane, Wash.; Junior Hoo-Hoo, J. C. McGrath, Little Rock, Ark.; Bojum, H. W. Hogan, San Francisco; Scrivenoter, James S. Baird, Nashville, Tenn.; Jabberwock, David W. Richardson, Dover, N.C.; Custodian, Robert Carpenter, New Orleans, La.; Arcanoper, F. L. Johnson, jr, Chicago; Gurdon, C. P. Ives, Baldwin, Kan.

Personal Mention.

Mr. W. F. Klugkist, of Montreal, is making a business trip through western Ontario and is also taking in Cleveland and Buffalo.

Mr. Ed. Ouellette, of the Tourville Lumber Company, is at the company's mill at Louisville, Que., on a tour of inspection, and is also superintending some repairs to the mill.

Mr. Geo. C. Goodfellow is at present on a trip through British Columbia, and incidentally will take in the Seattle Exhibition. Mr. Goodfellow expects to place a quantity of hardwood flooring in the West, where this product is in good demand. He is also buying British Columbia shingles for the Ontario trade.

Mr. P. D. Gordon, of the firm of Mason, Gordon & Company, 80 St. Francois Xavier street, Montreal, is on his way home from Edmonton. While in that city Mr. Gordon secured a large order for fir from Messrs. Foley, Walsh & Stewart, to be used in the construction work of the Grand Trunk Pacific. This will be supplied through the Vancouver office of his firm.

Mr. C. D. TenEyck, who has long been the general sales agent for E. C. Atkins & Company, Indianapolis, Ind., and Hamilton, Ont., has resigned his position to join the American Fork & Hoe Company, of Cleveland, as general sales representative for the United States and Canada. Mr. TenEyck has represented the E. C. Atkins & Company for the past five years, and is most widely and favorably known to the jobber, hardware dealer and the large mill trade, using that type of product. He has made many warm friends among his customers, who regret his leaving, and naturally cannot but congratulate him on the splendid position which he has been elected to fill. E. C. Atkins & Company have appointed Mr. F. J. Klingensmith, formerly superintendent of the Cleveland-Sarnia Saw Mills Company, as their representative, to the large mill interests around the Georgian Bay. Mr. C. R. Hubbard continues to represent them in southern Ontario, and Mr. A. D. Cantin, residing in Montreal, representing them in the Province of Quebec; their British Columbia representative being W. C. Birdsall, of Vancouver.

WANTED—EMPLOYMENT

EXPERIENCED LUMBER SHIPPER wants position to ship by thousand or on salary. Well posted Canadian and British shipments. Box 820, CANADA LUMBERMAN, Toronto. 19

Position Wanted

COMPETENT LUMBER INSPECTOR OF wide experience wants opening as yard foreman or inspector. Might arrange to buy on commission for responsible firm. Seeks change so as to reduce travelling and be more at home. Box 832, CANADA LUMBERMAN, Toronto. 21

WANTED—POSITION IN OFFICE OR AS shipper with British Columbia lumber or logging firm. I have had three and a half years experience in Canadian Chartered Bank and I am now office manager and shipper of large furniture manufacturing company. Will supply recommendation letters if requested. Apply to Box 839 CANADA LUMBERMAN, Toronto. 22

Situation Wanted

BY LUMBER ACCOUNTANT OF THIRTEEN years experience in wholesale and manufacturing offices. Past eight years in charge of office; now employed in that capacity by large pine mill and chartered railroad. Would like to make nominal investment as an item of permanency. Box 824, CANADA LUMBERMAN, Toronto. 20

WANTED—EMPLOYEES

Wanted

AN EXPERIENCED BAND SAWYER FOR Ontario lumber mills a good position for the right man. Write stating particulars to Box 833, CANADA LUMBERMAN, Toronto 20

WANTED GOOD PRACTICAL MAN TO take full charge, as yard foreman in retail lumber yard, also the unloading of cars, keeping stock in order, supplying material to planing mill and to take full charge of filling orders and delivering. Must understand sash, doors, mouldings and everything in wood in the building line. Must be young, strong and a hustler, and have the ability to handle men. A good steady position and good wages for the right man. Apply to M. Mc KINNON, Box 337, Cobalt, Ont. 11

COMPETENT SALESMAN WHO KNOWS Western Ontario trade to sell millstock—lumber, shingles, etc. State salary. Good references required. Apply Box 569, Lindsay Ont. 20

Wanted

MACHINE AND BENCH HANDS WANTED for sash and door factory. Apply to H. A. CLEMENS CO., Limited, Guelph Ont. 19

BUSINESS OPPORTUNITIES

For Sale

SAWMILL, CAPACITY 20,000, AND 1,300 acres of timber in Parry Sound district. Situated on lake with navigable water to R.R. Scow, camp, etc., in connection. Apply Box 840, CANADA LUMBERMAN, Toronto. 22

For Sale

Good Business Chance

PORTABLE SAWMILL IN GOOD SHAPE, latest improved, with 25 h.p. Engine, cable feed friction set works, inserted tooth saw, double edger slab saw, trucks, waggon, sleighs, also quantity of timber in the yard, also 50 acres of good clay loam, good building. Bargain. Will sell together or separate.

For particulars apply to Box 563 Newmarket, Ont. 11

FOR SALE—SMALL HARDWOOD MILL Well equipped. On Georgian Bay. Lumber sold for several years. A Bargain. For further particulars apply Box 844, CANADA LUMBERMAN, Toronto. 22

MISCELLANEOUS

FOR SALE—PARRY SOUND DISTRICT. Saw Mill, capacity 15 to 20 M. 400 acres timber, 100 M logs at mill. Plenty of cheap timber convenient. Two miles to shipping point. Snap for quick buyer. Box 832, CANADA LUMBERMAN, Toronto. 19

Timber, Lands and Saw Mills for Sale

The UNDERSIGNED Offers:—

Parcel 1. Ste Anne des Monts property situated on the South Shore of the St. Lawrence River, Gaspé County, Quebec, about 1000 acres of Seignior or Fee Simple lands—at the mouth of the Ste Anne des Monts upon which is located a well equipped lumber and shingle Mill with ample steam power, electric lighting, with a capacity of 25,000 feet of Lumber and 125,000 to 150,000 pieces of Shingles each ten hours—also Dwellings for workmen, Stables, Store houses, Repair Shops and Mill Pond and storage facilities for logs.

About 300 square miles of licensed timber lands upon which disinterested Explorers make a minimum estimate of over 350 Million feet of saw logs, principally spruce, fir and cedar, and 595,000 cords of Spoolwood, and Pulpwood.

All on drivable streams an average of not over 30 miles to Mill Pond.

And all shanty plant tools and equipment on the property.

Parcel 2. What logs are now in the river estimated 3 Million feet board measure.

Parcel 3. Grande Vallée property situated about sixty miles east of Ste Anne des Monts on the South Shore of the St. Lawrence River in the County of Gaspé, Quebec.

About 54 square miles of Seignior or Fee Simple lands and 100 square miles of Licensed lands.

A new Mill consisting of a steam feed Circular saws—1 Mershon Horizontal resaw—with all subsidiary Machinery and ample steam power and electric lighting.

Capacity 50,000 to 75,000 feet of Lumber each ten hours—A practically new Mill for sawing shingles and railway ties.

With ample steam power and electric lighting to produce 125 000 to 150,000 shingles each ten hours.

All the shanty plants, tools and equipment on the property.

On the timber lands, disinterested Explorers minimum reports are 100 Million feet saw logs, principally spruce, fir and cedar and two hundred and forty five thousand cords Pulp and Spool Wood.

Saw Mill, Timber Lands and Lumber for Sale

THE ESTATE OF J. D. MCARTHUR Esquire, offers the following Parcels, all situated in the vicinity of South Lancaster, Ontario.

PARCEL ONE: SAW-MILL consisting of tin roofed building with circular saw trimmers, double edger, shingle machine and bolter, rip saw tables, planer for tonguing and grooving, lath mill, etc., lighted by electricity, light generated on the premises. Capacity 15,000 to 20,000 feet of lumber each ten hours with ample steam power. Good custom trade to the mill from surrounding district.

PARCEL TWO: About 1137 acres of freehold timber lands on which disinterested explorers make an estimate of over 36,000 saw-logs, principally Hardwood. The above limits are all on drivable streams and an average of not over 18 miles to the Mill pond.

PARCEL THREE: About two million feet of sawn lumber piled in the vicinity of the saw-mill consisting of maple, birch, ash, elm, pine, etc., etc. Also—2,000 cords of slab wood, and a large quantity of shingles.

Tenders for the above mentioned Parcels EN BLOC or separately will be received up till the FIFTEENTH DAY OF OCTOBER, 1909. For further particulars address Mrs. J. D. McArthur, c/o The Estate of J. D. McArthur, South Lancaster, Ontario.

The highest or any tender not necessarily accepted by the vendors. 19

500 ACRES TIMBER LAND IN LAKE Township, Hastings County, Ontario, estimated four million timber. Over one million hemlock alone. Fine hard maple, gray elm, basswood, etc., and over six thousand cords of wood. Will sell very cheap. Snap for investor. Owner, care Cody Light Co., Detroit, Mich. 19

**Proposals**

THE CITY OF TORONTO, CANADA, WILL shortly call for tenders for Pole Line Supplies, including Poles, Crossarms, Pins, Braces, etc. For information apply ELECTRICAL DEPARTMENT, City Hall. 19

British Columbia Timber.

British Columbia has an area of 395,000 square miles, or 252,800,000 acres. Of this 82,000,000 acres are in forest and woodland, nearly one-third of the entire area of the province being in timber.

In 1907 the mills of British Columbia cut 846,000,000 feet of lumber, to say nothing of the lath and shingles they produced. The cut of 1907 was worth \$12,700,000. Figures relative to the cut of 1908 have not yet been entirely completed for publication, but the activity of the coast mills was such during last year that it is predicted the output of the province as a whole will be in excess of the product of the preceding year.

British Columbia is the home of the Douglas fir and the giant cedar; she has extensive forests of spruce and other woods and is one of the great centres of supply for the lumber demand of the world. In the years to come, declare foresters who have spent years in calculation relative to the consumption of timber and the visible supply, the world will have to fall back on British Columbia for its lumber. Incidentally they also predict that unless immediate steps are taken by this province to conserve the present standing timber and adopt the means of adequate reforestation there will be little standing timber in British Columbia when another half century has rolled around.

Mexico's Timber Development

The recent Pearson railroad purchases mark an epoch in the development of northern Mexico, and especially the district of Ciudad Juarez. The Pearson railway interests there now include the Chihuahua and Pacific line, extending 173 miles from the city of Chihuahua to Temossachic; the Sierra Madre & Pacific, a 32-mile line connecting Temossachic with the timbered district at Madera, and the Rio Grande, Sierra Madre & Pacific, running 156 miles south-westerly from Ciudad Juarez to Terrazas. This new syndicate proposes to complete the 160-mile connecting link between Madera and Terrazas. When finished this road (Mexico Northwestern) will insure access to the timbered district, the mineral fields, and will provide new routes to markets for exports and imports.

Apple Butter for lumber camps

I am manufacturing and have for sale a high grade of apple butter which I guarantee to give satisfaction. It has already gained a wide reputation among all users.

Telephone in connection.

Review of Current Trade Conditions

Ontario

The past fortnight has seen an important improvement in the conditions of the white pine market throughout Ontario. Prices have gone up from \$6 to \$10 for the better grades. The lower grades, however, are still only in fair demand. The improved prices are the result of a shortage of the good ends. Trade in general is still quiet throughout the country districts. The British demand is reported to be improving extensively and to be taking large quantities of pine. The same is true of the market in the United States. British Columbia cedar shingles have fallen still further in price and are now quoted at \$4.05 for the XXXXX; \$3.35 for the XXXX; \$3 for the XXX, and \$2.05 for the XX cedars. The supply of shingles is still exceedingly plentiful and dealers are well loaded up with stocks.

The market for hardwoods has improved somewhat during the past week and orders have been coming in pretty nicely for practically all classes. American hardwoods have been in good demand, quarter-cut oak is selling well. The stocks of quarter-cut oak show signs of becoming scarce, and it is feared that there may be a shortage about the first of the year. English hardwoods are also holding up well, although basswood is rather discouraging. Plain oak is in good demand and prices are steady.

Reports from Ottawa indicate a continued period of quietness in the lumber trade. Business generally is steady but there is no great buoyancy. Prices, however, are well maintained and manufacturers really have no cause for complaint. The improvement in general trade conditions in the United States is helping to keep up the demand for lumber. Shipments to the English markets show a falling off as compared with last year, and the supplies available for export show no shortage. Prices are, if anything, a trifle lower than during the first of the month. Good grades of box board are selling at \$18. No. 2 white pine also has fallen off about 25 cents a thousand. Pine boards, lath and shingles are unchanged for most lines. 1½-inch white pine lath, first quality, is in better demand and selling at \$4 per thousand. The 1¾-inch variety is selling at 25 cents less. Tamarac of fair quality brings \$12 per thousand for the 1-inch mill run and \$15 to \$17 for 2-inch by 3-inch.

Eastern Canada.

There are strong indications that spruce lath will before long be selling at higher prices in New Brunswick. Enquiries are quite numerous and quotations are showing a tendency to advance. The supply of spruce lath on the market is also growing smaller, some St. John manufacturers having sold their whole stock as well as all they will cut during the rest of the present season. Sales are reported at \$2.80 per thousand, f.o.b. schooner St. John, and in some cases a small advance on this price has been given. English spruce deals are steady. The freight rates have advanced slightly, being now 33s. 9d. per standard to the West Coast. The trade continues quiet with a gradual improvement. Reports indicate that stocks are growing smaller at the principal distributing centres of Great Britain, but this has not yet had any effect upon prices or demand. At St. John the stocks of "English" have increased during the last fortnight, amounting now to about 6,000,000 of superficial feet, for which the quotations are from \$14.50 to \$14.75 per thousand feet for specifications containing 50 per cent. sevens and eights, 35 per cent. nines, and 15 per cent. elevens and wides.

The demand for spruce at Boston during September was not so extensive as had been expected and prices have become a little easier in some cases. Frames 9-inch and under have been selling at \$23, and

the general price asked is \$23.50. Random is only in moderate demand. The market is unsteady for stocks between 2x3 and 2x7. Strong dealers are holding up to \$21, but about the highest price offered is \$20.50. The prices of the larger sizes are not firm. Spruce boards are in only moderate demand. Matched spruce board, clipped, is quiet at from \$21.50 to \$23.50. A demand for all kinds of spruce has turned up at Buffalo, to supplant white pine. It is expected that a considerable quantity of this will come from Canada since the reduction of the tariff took place. Shingles are dull at Boston. Some of the Canadian manufacturers are still asking \$4 for the best cedar "extras," but United States manufacturers are selling at lower prices. Lath are very firm, with higher prices than a week ago. For 1½-inch the general price is \$4.10 to \$4.15. Some manufacturers are asking as high as \$5 and others \$4.25 to \$4.50. There is a fair demand for 1½-inch, with prices ranging from \$3.65 to \$3.75.

Western Canada

The logging situation in British Columbia shows little or no change. Fir logs show an upward tendency but are still cheap. The better run range from \$6.50 to \$9. The common or shingle run of cedar logs are plentiful and in only moderate demand, at from \$7 to \$8. The better run of cedar logs are rather scarce and are in good demand at from \$11 to \$13. It is expected that the good crops on the prairies and a probable decrease in production of logs during the wet weather, will strengthen the price of logs, so that within three or four months they will be selling at \$10 for a good camp run of fir logs. The lumber industry generally is experiencing fairly satisfactory business conditions. Prices are firm at the recently advanced figures. Several mills are reported to be enlarging their capacity, among them the Lamb-Watson Company and the Thompson River Lumber Company, at Kamloops. In the interior of the province there is great activity in the cutting of cedar posts, ties and telegraph poles.

Great Britain.

There is a more general tendency towards satisfaction with market conditions than has been noticeable for some time. Prices are fairly well maintained and there is a tendency to advance in the prices of useful sizes in deals, battens and all plain goods. There is an expectation that, on account of the Swedish strikes and the cholera in the White Sea district, there will shortly be a comparative shortage of stocks, and that by the end of the year further advances in prices may be looked for. At Foy, Morgan & Company's recent auction sale, 3x11 second Montreal pine sold at £23 25s., and 9-inch at £18. Quebec spruce, 3x7 second, sold at £8 5s.

Reports from Liverpool indicate a decided improvement in the market, so extensive in fact that those who bought their stocks some time ago are now well pleased with their foresight. The spruce deal market continues firm and there is a strong tendency to advance in the prices of future deliveries. Shippers from New Brunswick and Nova Scotia ports are not pressing sales, being apparently contented to await the course of events. It is reported, however, that if a cargo of St. John, N.B., spruce deals were to be asked for, the price would be £8 5s. c.i.f. for the usual specifications, with a reservation as to time of delivery. Mirimachi shippers are firm and the sale of a large cargo to the Bristol Channel is reported at prices a little better than those just quoted.

United States.

Conditions generally continue promising and enquiries for all kinds and qualities of lumber are extensive. Many of these enquiries have re-

SARNIA, ONTARIO

sulted in good sized orders. At Chicago white pine is in good demand with a steadily advancing price. It looks as though the prices of the upper grades of northern pine stocks would continue to advance. The market for fir, spruce and cedar at Chicago is improving, but still has rather a nervous tendency. Railroads, however, have sent out many enquiries for timbers. Spruce shop is selling well and B spruce siding is too scarce to fill the demand. The southern pine trade at Chicago is going along steadily with plenty of stocks offering and fairly good demand. Red cedar shingles have exhibited a slight tendency towards decline at Chicago. "Clears" are quoted at \$3.40 and "stars" at \$2.80, f.o.b. Chicago. It is expected, however, that prices will improve again as the number of cars in transit is small. White cedar shingles are selling fairly well with unchanged prices. Lath are also unchanged. The cooperative trade at Chicago is still suffering from a small demand and price cutting.

Market Correspondence

Ottawa Valley News—Preparing for the Crops.

Ottawa, Sept. 27.—The lumber trade is passing through a period of quietness in the Ottawa valley. Dealers and manufacturers report steady business but in no instance is there any evidence of buoyancy. Fortunately for the maintenance of good prices, the large producers have the best reports on the market conditions. The salesman for J. R. Booth told the "Canada Lumberman" that the firm's business was very good and that if the trade was as good in other quarters there should be no cause for complaint. The tariff had not yet made any noticeable effect on sales to the United States, even in respect of shingles, which are the heaviest taxed. The improving tone of the trade on the other side is believed by the Booth people to be the cause of keeping up the demand for lumber. The local shippers to the English market assume that prices are weak over there and the trade dull. The export up to date is behind that of last year and there is no indication of a shortage of supply at the places of delivery.

Lumber has been selling a little lower than early in the month. The best box board commands about \$18, and No. 2 white pine lath has dropped 25 cents a thousand. The quotations of most lines of pine boards, lath and shingle, are regular and not likely to undergo any marked change. There is a better demand for 1½-inch first quality white pine lath than any of the other brands, and the prevailing figure is \$4 per thousand. The Shepard & Morse Company is turning out a considerable quantity. The 1⅜ sort sells at 25 cents less. A fair quality of tamarac is selling at \$12 per thousand. This is the one-inch mill run, while two-inch by three sells at from \$15 to \$17.

The lumber industry shows none of the signs of curtailment of cuts in the woods that were in evidence a year ago. Wages in 1908 were indefinite, too, running from \$16 to \$26 according to the merit the men showed after they had begun to work. Now, hands cannot be induced to leave the city except for a guaranteed wage. The figure of most companies is from \$24 to \$28 per month. Road cutters get the lower amount and nearly all the log makers, teamsters and rollers are paid \$28. Some hands sent by J. R. Booth to Eau Claire were hired as high as \$30. Graves, Bigwood & Company are sending gangs to Nairn Centre; Carney Lumber Company, to Massey; Pembroke Lumber Company, to Jocko and Rockcliffe; Victoria Harbor Lumber Company, to Wahnapiatae; Colonial Lumber Company, to North Temiskaming; and Northern Lumber Company, to North Bay. The James MacLaren Company, of Buckingham, are not hiring so many as usual nor giving out large contracts to jobbers, but the reason is because the company has a large quantity of logs ahead. News comes from Maniwaki that hiring has been more active there than in many seasons past, due, it is understood, to contracts placed by American companies.

Since the farm work in the Ottawa valley became slack the difficulty of securing men has disappeared. The firm wages, compared with a year ago, are an indication of the more extensive operations planned because nearly all the available men are being picked up.

There is no indication of low water hindering the movement of lumber before navigation closes. The river last year at this time was so low that Booth's lumber mill was not running in the day and most of the Eddy works were running only at half capacity. The Ottawa river was only 5½ feet deep at the foot of the Rideau locks, while to-day it is 10 feet.

The James MacLaren Company, of Buckingham, is concerned in a movement among the German population of High Falls, numbering 100 families, 26 miles up the Lievre river from Buckingham. The Germans are farmers who claim that the dam maintained by the mill owners is responsible for the flooding of their property every spring. The MacLarens keep the dam to operate the slide when the stream is low. The pastor of the German settlement, who is leading the action against the lumber concern, proposes to ask for heavy damages. The company

claims that the dam is necessary for its driving operations and that the real cause of the flooding of the farms is the freshets of the spring. A similar action 15 years ago failed against MacLaren & Ross.

The usefulness of the Canadian Lumbermen's Association was attested by the successful conduct of the case against the G.T.R. and C.P.R. over the increased lumber tolls. At a luncheon the day of winding up the case, Mr. John Hendry, president of the Canadian Manufacturers' Association, and Mr. D. C. Cameron, of Winnipeg, spoke in glowing terms of the Association's achievement. The occasion also brought together the lumber kings from distant parts, and they got in closer touch with the officers of the Association. The investigation of the tariffs has been the chief work of the Association since it was formed and if it accomplished nothing else, this would have justified the organization. The Association may have another contest when the question of export rates comes to be ventilated. As stated elsewhere in this issue, the increases in the export rates have to be justified by the railway companies. Until all this is settled the lumbermen have no criticism to make of the outcome of the contest so far as it has been conducted. Mr. Gordon Edwards, president of the Canadian Lumbermen's Association, told the "Canada Lumberman" that it was not the time yet to pass judgment on the matter. As to the working out of the tariff schedule to make a more favorable rate for lumber shipping, Mr. W. B. Bulling, the C.P.R.'s tariff expert, asserts that the task was gigantic and any improvements will be difficult to make.

From New Brunswick's Capital—Spruce Lath Stiffening.

St. John, N.B., Sept. 24.—The fortnight has been productive of many events of considerable interest in the lumber trade and industry. Particularly interesting are the preparations of local lumbermen in connection with their log operations during the coming winter, indicating as these preparations do, the prospects of trade as viewed by the man who saws the lumber. Generally speaking, the policy of local lumbermen seems to be to avoid loading up with raw material, at the same time having available enough logs to ensure a fair season's work next year. In short, it might be said that the line of operation followed will be much the same as was the case last winter and the winter before, when the total cut of cedar and spruce was about two-thirds of the quantity gotten out each winter for a long time previous. This conservative policy, while hardly indicative of a lack of confidence in the deal markets, might be said to mean a desire on the part of those most interested to be not too vitally interested in case the predictions regarding the future of spruce deal might prove too optimistic.

The prospects are that the present manufacturing season at the mills at St. John and on the St. John river, will be about the average. Of course, the mills at Fredericton and other up-river points will cease operations as soon as the river freezes, but the local mills will continue to run as usual until mid-December. It is doubtful if any of the mills will continue to run throughout the winter or even entirely through December.

The local market for spruce lath has shown considerable indication that higher prices will ere long rule in this line. Inquiries are becoming more insistent and it seems more difficult to obtain quotations at the prices which have been the rule. The supply of purchasable spruce lath seems to be diminishing and in several cases local manufacturers have disposed of all they have on hand and all they will saw throughout the remainder of the present manufacturing season. It is stated that sales of spruce lath have been made at \$2.80 per thousand, f.o.b. schooner St. John, and that in some cases a slight advance on this figure has been asked and given.

The market for "English" spruce deals has shown no new features that might be applied in a general way. A slight advance in freight rates has taken place, the ruling figure at present being 33s. 9d. per standard to the West Coast. Trade in "English" is uniformly quiet, but with the general tone improving slowly from month to month. Reports from the chief distributing centres of Great Britain tell of lighter stocks of Canadian spruce and also of lighter receipts, and yet these circumstances have had no actual or tangible response so far as prices or even demand are concerned. Still there is at least no sign of a weakening; all the indications point in the opposite direction. Local stocks of "English" have augmented considerably since last writing. Local holdings in this line would total to a quantity in the vicinity of six millions of superficial feet. The present local value of "English" spruce deals, in a specification containing, say: 50 per cent. sevens and eights, 35 per cent. nines and 15 per cent. elevens and wides, would range from \$14.50 to \$14.75 per thousand feet.

An incident unique in the history of the local lumber trade occurred a few days ago when a local woodworking concern had a large-type advertisement displayed in a local newspaper, which set forth their desire to buy pine lumber of good quality. Such is the scarcity of this wood that at times the local product is practically unobtainable. Very little is exported and any manufacturer who happens to get any pine logs is always sure of a good market for the product thereof. The local price of undressed "planers" at present is from \$52 to \$57 per thousand feet.

Lumberman President for C. M. A.

John Hendry of Vancouver, Honored by the Association. — A Man of Varied Activities

The accompanying portrait is that of Mr. John Hendry, of Vancouver, B.C., the well known lumberman who was honored by being elected president of the Canadian Manufacturers' Association, at its recent annual meeting at Hamilton, Ont. Mr. Hendry was born at Belledune, N.B. He commenced in the milling business there. In 1872 he left for the West, travelling on the Union Pacific (just then opened through to Sacramento), and by boat from San Francisco, and thence to British Columbia. After staying there for some time, Mr. Hendry went to the Red river, and was in Winnipeg in 1875. He did not find the timber there suitable, after being accustomed to the large trees of British Columbia, and so he returned to New Westminster, the city of Vancouver not being in existence at that time.

Mr. Hendry commenced in the sawmill business with the Royal City Planing Mills, which under his direction assumed large proportions.

In 1895 he formed a company which includes the Hastings Saw Mill, of Vancouver; the Royal City Mills, of New Westminster; the Royal City Mill, of Vancouver; and the Moodyville Mill, situated opposite Vancouver, on Burrard Inlet, these various concerns being now branches of the British Columbia Mills Timber & Trading Company, of which Mr. Hendry is president and general manager. Upwards of 2,000 men are on the pay-roll of this company, engaged in logging operations in British Columbia, in the operation of tow boats and railways, of which there are

John Hendry, Vancouver, B.C., New President of Canadian Manufacturers' Association.

about 40 miles; in the manufacture of lumber, and in the various sash and door and box factories, planing mills, etc. The lumber is shipped to all parts of the world, a large trade being carried on with the Northwest provinces.

Mr. Hendry has filled the offices of alderman and mayor for the city of New Westminster. He was a charter member and has been president of the Board of Trade. He has taken a deep interest in the growth and development of the city and British Columbia as a whole. His business interests are extensive, including the Nicola Valley Coal & Coke Company, with mines at Nicola, B.C., of which he is president; the Vancouver, Westminster & Yukon Railway, of which he was instrumental in the construction. He was proprietor of the Stave Lake Power Company, which is now merged into the Western Canada Power Company.

Mr. Hendry has been appointed a member of the Commission for the Conservation of the Natural Resources of Canada, in which he has always taken a deep interest. He has been a member of the Canadian Manufacturers' Association for a number of years, and was provincial vice-president for British Columbia and vice-president of the Association for the last two years. He intends to devote a large part of his time to the affairs of the Association, and has made arrangements to get in touch with all the provincial branches in order to get a complete acquaintance with existing conditions.

Mr. Hendry is above all things a firm believer in Canada's future. By the wise and judicious handling of his many and varied interests he has himself been an important factor in the wonderful growth and development of the Pacific province. He is also president of the Lumber & Shingle Manufacturers' Association of British Columbia, and a director of the Canadian Lumbermen's Association.

Disstons make Extensive Increase in their Plant.

Henry Disston & Sons, Quebec, have just completed the first of a group of new additions to their already large plant at Tacony. This latest addition is a complete machine shop, thoroughly modern in every detail. Its size and equipment is such that it can duplicate the largest machinery found anywhere in the 50-acre plant. The building is 180 feet long by 80 feet wide, and two storeys high. Comparatively little brick is used, the major portion of the walls being composed of glass framing, which makes the interior as bright as daylight in every corner.

The first floor is completely served with narrow gauge railway tracks—the latter connecting at the main entrance with a 40-foot railroad spur running lengthwise of the structure, a 10-ton electric crane lifts from truck and serves any machine on the first floor, or to the landing platforms of the second floor galleries.

The usual machine equipment of a complete modern plant is found within the four walls, planers, grinding machines, lathes, shapers, milling machines, drill presses, boring mills, etc., of the latest pattern are built by the best machine tool builders. The heavier machines are, of course, on foundations; the lighter machines are bolted to the concrete floor; while the array of lighter tools are placed in the galleries. The whole plant is operated with electric power, coming from a central station. Further economy is gained through running the various machines in groups. A Sturtevant heating and ventilating plant keeps the atmosphere clean and fresh, never permitting it to go below a temperature of seventy degrees, even when the thermometer outside registers zero.

Capping the full length of the roof is a large electric sign, six-foot letters forming "Disston Saws," which is visible at night for miles up and down the Delaware, New Jersey, and over Tacony.

Mr. M. G. Curran, general manager of the British America Mills & Timber Company, Limited, was in Toronto recently arranging eastern connections for his company. The British America Mills & Timber Company, Limited, have absorbed the Canadian interests of the Chicago Lumber & Coal Company, one of the best known firms in the United States. The British America Company will occupy the Chicago Lumber & Coal Company's former offices in the seventh floor of the Union Bank building, Winnipeg. This move is the result of the growth of the Chicago Lumber & Coal Company's Canadian business, which necessitated the formation of a Canadian company with a Dominion charter and with head office at Winnipeg. Mr. S. H. Fullerton will be president; J. C. Cremer, secretary; Frank Geopel, treasurer, all of St. Louis, Mo., who hold similar offices with the Chicago Lumber & Coal Company. M. G. Curran will be vice-president and general manager at Winnipeg; there will also be other Canadian directors. The new company expects to operate very extensively in all western provinces, including Ontario.

A Creditable Display of Belting.

The Dominion Belting Company, Limited, Hamilton, Ont., made a creditable display at the Canadian National Exhibition of their well known "Maple Leaf" brand, stitched cotton duck belting, which they claim is the strongest, truest running, and most economical belt on the market. Being thoroughly waterproofed, it is equally good for indoor or outdoor work. "Maple Leaf" belting is made from the best quality of duck, specially woven to their own formula, and is machine folded; the sewing is done with a special strong twine, and is lock-stitched. "Maple Leaf" endless thresher belts, they claim, are superseding rubber, costing much less, and proving more durable. Any size belts can be made endless, on the large power machines used in the manufacture of "Maple Leaf" belting.

The company also manufacture "Maple Leaf" belt dressing, for keeping belts soft and pliable, preventing slipping, thus saving the consequent loss of power. This dressing is equally good for any kind of belting, leather, rubber, etc. The company are agents for the Jackson belt lacing machines, also for the "Crescent" belt plates and rivets, which, they claim, make the best joins, causing practically no friction in going over pulleys.

The Jury of Awards who examined the exhibits and rendered decisions on the saw displays at the Alaska-Yukon-Pacific Exposition, Seattle, Wash., had a very difficult job on its hands, as there was keen competition for first honors among the four firms exhibiting. The jury was composed of five men selected on account of their thorough knowledge of the general steel business. All of them might be called experts in their particular lines. Their deliberations required several days' time, and the result which awarded to Simonds saws the grand prize and to the other three an equal division of second prize, was based on careful tests of the saws.

A report from Vancouver states that on October 1st lower grades, dimension boards, shiplap, etc., are to advance \$1 a thousand.

Lumber and Sawmill Insurance

By using the facilities of this office the COST of insurance on your LUMBER and MILL property will be MATERIALLY REDUCED without impairing the quality of your present indemnity. A SUBSTANTIAL SAVING is possible because our experience as SPECIALISTS has taught us to direct the property owner's efforts for PHYSICAL BETTERMENT of his property into the channels which will result in RATE REDUCTIONS. We have also eliminated many forms of expense, thereby SAVING to our policy holders unnecessary drains on our premium income.

If you are interested **Write Us**, and you will find that we are interested in you.

New Edinburgh Mills

Ottawa, Ontario

EDGINGS

Ontario.

Fire recently destroyed C. N. Clendenning's planing mill at Niagara Falls, Ont. \$25,000 worth of lumber and machinery were burnt.

The new box factory of Graves, Bigwood & Company at Byng Inlet, on Georgian bay, is in operation and is found to be of much service in working up lumber so short that it is not profitable to ship it any distance.

Edward O. Babcock, manager of the St. Catharines Wood & Supply Company, of Thorold, Ont., announces that plans have almost been completed for a new company to locate on the United States side of the river as a branch of the Thorold company.

It is estimated that the mills in the Georgian Bay district will cut 550,000,000 feet the present season. The Spanish Boom & Slide Company will handle a total of about 150,000,000 feet of logs. The season has been favorable for log rafting, as there was a good stage of water for driving purposes in the spring.

Tenders will be received by J. A. McDonald, purchasing agent for the Canadian Locomotive Company, Limited, Kingston, Ont., until October 15th, for 40,000 lineal feet wharf timber, ash, elm, hemlock, tamarac or poplar, to be not less than twelve inches at large end, ten inches small end, in lengths of twenty feet and upwards; to be delivered at Kingston not later than January 1st, 1910.

The steamships "Kongo" and "India" have just discharged at Fort William, Ont., their cargoes of hemlock timber, and Messrs. Mason, Gordon & Company report that these vessels will probably make two more trips each this fall, carrying similar cargoes. This timber will be used in connection with the other extensive improvements that are being made at Fort William and Port Arthur in order to facilitate the handling of the grain from the Northwest.

The sash and door factory belonging to Mr. John Donaldson, of Almonte, Ont., was destroyed by fire on Sept. 23 about midnight. Loss about \$7,000. The flames when noticed had gained considerable headway, and when the fire brigade arrived the structure was doomed. Mr. Donaldson states that the machinery was valued at \$5,000, and the building at \$1,500. About \$200 worth of lumber that was in the mill was also destroyed. The cause of the blaze is a mystery. The insurance will be about \$2,000.

The Canadian Northern and Canadian Pacific Railways are reported to be requesting the Ontario Government to set apart under lease large tracts of Ontario's Crown timber land to supply them with material for ties. It is also reported that other railways may make similar applications. According to the report, the railways ask that the timber cutting rights on certain areas, to be designated, be accorded them on the regulation assessment dues and under the existing Crown regulations. It is believed that they have expressed a willingness, should the privilege asked be accorded them, to confine the cutting solely to timber of the growth needed for the making of railroad ties.

Eastern Provinces.

A large planing mill will be erected at Montreal by Friedman Bros.

Stephen Bros.' sawmill, at Windsor Junction, N.S., with all its machinery, was recently destroyed by fire. Loss, \$8,000.

Mason, Gordon & Company have just chartered two steam vessels to operate during the next spring and to carry the firm's supply of southern pine from Savannah and Brunswick, Ga., to Gaspé and Grande River, Que.

William Currie & Company, Limited, have sold their mill property and timber limits at Charlo, N.B., to the Credit Foncier Canadian, of Providence, R.I. The business will be run as formerly and a large mill will be erected to manufacture spruce.

S. Vaughan & Company, of St. John, N.B., have sold their large sawmills and timber lands to a Swedish-Canadian lumber company, of which Norden Rosebank, Northumberland county, is manager. The mills include what was known as McLéod mills.

It is stated that the interests controlling the Berlin Mills property in New Hampshire are planning to install a print paper mill plant at La Tuque, Que. It is also reported that the International Paper Company has prepared plans for numerous mills in Canada.

About 24,000 feet of lumber belonging to R. B. Bishop and two tenement houses were recently destroyed by fire at Robertson Station, Que., on the Quebec Central Railway. The loss is estimated at \$10,000. The fire is thought to have caught from boys smoking cigarettes among the lumber piles.

Mason, Gordon & Company recently secured an order for the supply of timber for the construction of the new gates at the "Soo," Ont. They will be built of fir and oak, the former being from 16 inches to 18 inches thick, and from 31 inches to 36 inches wide, all 37 feet long. The oak will also be of a large size and is being brought from points in Indiana and Ohio. As over 1,000,000 feet of timber will be required for this work, the contract is an exceptionally difficult one to fill.

In a few days the Chaudiere dam, erected to supply power for the Eddy and Booth mills, will be completed. It now only lacks the stop log winch. This weighs 25 tons, and is constructed so as to lift 35 tons. The corporation of Hull has decided that the dam is so beneficial to its water service that it will not levy any tax, though the improvement is worth a quarter of a million dollars. The water has been so high this season that it has never been necessary to utilize all the stop logs provided.

R. C. Mason, of New York, recently visited Halifax, accompanied by W. Seward Webb, jr. Mr. Mason is interested in a proposed merger of Nova Scotia lumber properties. He says that the money is available in Chicago for underwriting the bonds of the company to the extent of between \$5,000,000 and \$6,000,000, if it is shown that an aggregate output of 200,000,000 feet annually can be produced by the combined company. The present lumber output in Nova Scotia is 150,000,000 feet. Mr. Mason has been at work on this proposal most of the summer, but he does not say whether it is likely to be consummated, though he thinks it perfectly feasible.

Gordon Hollow Blast Grate Co.

Greenville

Michigan

Quebec and pulp and paper mills at Hawkesbury, Ont., and Merriton, Ont., and G. H. Perley & Company, of Ottawa, owning limits and sawmills in Quebec, have combined their properties. The capital will be about \$3,500,000, and the new company will own about 1,200 square miles of pulpwood country on the Rouge river in Quebec. The new firm will be called "The Riordon Paper Company, Limited," and will produce newspaper and building paper, sulphite pulp, spruce and hardwood lumber, and clapboards. Considerable developments will be undertaken in the near future.

The Provincial Department of Lands, Forests and Mines has received a communication from Senator W. C. Edwards, head of the Edwards Lumber Company, calling attention to the advent of what is commonly called the spruce bud worm, among the growing spruce up the Gatineau river, Que. The department was notified that the Dominion Entomologist has been sent to investigate and has reported that so far not much damage has been done, Quebec alone suffering, but that the utmost care must be taken to prevent a spread. Mr. Aubrey White, Deputy Minister of Lands for Ontario, has instructed the provincial forest rangers to investigate and report whenever there are any evidences of the pest. Great ravages have been wrought in the spruce forests of Maine from this cause, and the Government of that State has spent thousands of dollars in its efforts to combat the pest. So far Ontario's timber has escaped.

The E. B. Eddy Company, Hull, Que., have erected a conveyor to carry and distribute wood along 500 feet of ground between their sawmill and factory. The carriers start at an elevation of 60 feet, and descend till the ground is reached, 500 feet away. The device is to save hauling, and by its use four teams and fifteen men can be dispensed with. The structure is all steel, and will be run by an electric motor. The wood is delivered from the butting saw into carriers, and is dropped from the conveyances into traps at intervals. The great height is provided so that it can be piled to suit the requirements. The Eddy Company is progressive in installing labor saving devices. Its automobile trucks used for delivering paper save a few teams and men. The mechanical carriers are being erected by the Jeffrey Manufacturing Company, of Montreal.

Western Canada.

A new sash and door factory is to be built at Victoria, B.C., by Burdick Brothers.

The Beaver Lumber Company have purchased a site at Portage la Prairie for the extension of their plant.

The Robinson & McKenzie Lumber Company will erect a mill at Kamloops, B.C., if a site can be secured.

The B. F. Graham Lumber Company has announced its intention of constructing at Victoria, B.C., in the near future, a sawmill with a daily capacity of 100,000 feet.

If a site can be secured, the Cranbrook mill people will erect a plant costing over \$100,000 at Kamloops, B.C. In addition, they will also put in a sash and door factory and a casket factory.

J. C. Ryan, H. Witherspoon and J. R. Cassin, of Spokane, have incorporated the Beaver Lumber Company, with a capital of \$250,000. Timber is held on the Duncan river in the Kootenay, with more along the Fraser river.

A logging contract of considerable importance to the town of Nakusp, B.C., has been entered into between Lindsley Bros. Company, of Spokane, and A. Criel & Hartling, of Nakusp, whereby the latter will take off all the timber on 1,200 acres of land on the lake shore south of the town.

W. E. Simpson, of Iowa Falls, Iowa, a couple of years ago invested in timber on the southwest coast of Vancouver Island. Recently he sold it to F. L. Peck, of Scranton, Pa., president of the United States Lumber Company, for \$200,000. He is said to have netted 500 per cent. on his investment.

The Canadian Pacific Sulphite Company, at Swanson Bay, was successful in getting the contract this year for spruce oar stock for the British Admiralty. This company has also cut some fine clear spruce timbers for a shipbuilding company in Glasgow, some single pieces of which contain 1,000 feet.

Mr. W. I. Paterson, of the Paterson Timber Company, Vancouver, B.C., is considering the establishing of a plant at Vancouver for the extraction of alcohol from wood refuse. Mr. Paterson made a trip to Europe early in the present year to look into methods in use there, and is now in touch with the scientists in Chicago who claim to have solved the problem.

Word comes from Portland, Ore., of the sale through James D. Lacey & Company, there, of about 2,000,000,000 feet of standing timber in the Salmon river district of Vancouver Island, to C. A. Buchner, of Hamburg, Ark.; C. V. Edgar, of Boulder, Col., and associates, who took over the interests of Harry E. Hopper, Charles E. Bentley and others. The timber is said to be exceptionally fine even for that region and runs chiefly to yellow fir and cedar. James D. Lacey & Company are making detailed estimates, and it is said that additional purchases by the same parties will probably follow.

Vancouver business men are receiving and making large shipments by the Tehuantepec Railway across Mexico, affording a short cut between the Atlantic and Pacific. Among the shippers have been several lumbermen and shingle manufacturers, who found it profitable to route consignments that way when filling orders for the Eastern States. The opinion is generally expressed that when the Panama Canal is finished lumbermen in British Columbia will be placed in a peculiarly fortunate position for filling foreign orders and that a large demand for the products of the British Columbia forests will spring up as soon as the canal is opened.

Mr. Max. Macgowan, of Macgowan & Company, Vancouver, reports that a considerable impetus may be expected in the lumber trade between Vancouver and New Zealand and Australia. The chief item of interest in this line, Mr. Macgowan stated, had to do with the added amount of idle tonnage which would be available on Puget Sound and British Columbia waters with the arrival on this coast shortly of all of the seven British steamers chartered by the United States Government to carry coal from the Atlantic to the navy yard at Bremerton. It was to be noted that, whereas lumber rates to Sydney and the Antipodes had been very low for nearly a year, almost at the minimum, the arrival of these extra vessels, making idle tonnage beyond the demand, would serve to keep the rates low and act strongly as a stimulus for the lumber trade. The average lumber rates offered for steamers to Sydney is 30s., while sailors receive 31s. 3d. as an average. The increasing inquiries for lumber from Australia and New Zealand ports showed that the business was rapidly improving in that direction. For the past four or five months there had been very little movement in the lumber market toward the Antipodes, whereas from now on it could be expected that the usual three ships a month would leave Puget Sound and British Columbia waters under special charter for Australia.

A Day's Run

—of—

The Shimer Cutter Heads

On your matcher or moulder will convince you of their ability to produce neatly formed single tongue and groove flooring in sufficient quality to make their use interesting. The cross-grain and the knot take better finish by reason of the alternate clearance cut, for making of which these tools embody special features.

The cutters work in pairs, dividing the cut into upper and lower series upon the head, operating alternately, thereby reducing the tendency to tear out the fibrous or knotty portions of the board. Their careful, systematic construction reduces the labor of keeping the heads and bits in perfect order, and in many mills they have been known to **SAVE THEIR COST IN A DAY'S RUN**.

May we show you by actual test what they can do for you? We send them to responsible lumbermen anywhere on trial. Address

Samuel J. Shimer & Sons, Galt Ont.

CAN YOU BEAT IT?

**\$20 a Day Profit on
a \$100 Investment**

The DeLoach "Mustang" Shingle Mill

will cut 10,000 Shingles per day with 4 H. P. and 20,000 with 8 H. P.

and give you as smooth shingle as turned out by any machine on earth that costs \$300.

It is all steel and durable for a lifetime. The Carriage has ball-bearings, and a coil spring at each end, insuring a Quick and Easy Stroke.

Write for catalog of 254 pages describing Saw Mills, Shingle Mills, Planers, Gang Edgers, Trimmers, Lath Mills, Corn Mills, Flour Mills, Corn Crushers, Water Wheels, Engines, Boilers and Gasoline Engines.

DeLoach Mill Mfg. Co. Box 509
 Bridgeport, Ala.

"The Dunbar" Steam Logging Engines

Patented in Canada and U.S.A.

Dunbar Logging Engine.

With all large operators log moving is a question of importance, and, in long hauls, one of expense. **Dunbar Logging Engines** are designed for heavy service in logging operations and built by men who know what the demands are and appreciate the conditions under which they must work. Upwards 150,000 feet of lumber can be hauled by the "**Dunbar**" over snow or ice roads.

This machine cannot be compared with horses. It will do the work of forty teams, and do it quicker and better. To meet competition successfully, you must have modern equipment. Why not let us explain the **Dunbar**? Our descriptive circular and photos will be sent upon request and all information cheerfully furnished.

The **Dunbar** Shingle Machine which we also construct is a superior contrivance and is the most profitable machine on the market for the manufacture of shingles.

TRADE MARK.

Induction Motors

will surely do that in your lumber-mill — or any other — Because

Hawthorn Induction Motors naturally must decrease the operating cost of any saw, any planer, any machine whatever, inasmuch as they not only increase the speed of the machine, but keep that speed the same whatever the load, and make that machine easier to operate because they give positive and instant control of stopping and starting. Incidentally there is no waste of power when the machine stands idle during working time.

Hawthorn Induction Motors also must surely lessen your outlay for power, materially—Because

the direct drive of a Hawthorn Motor, applied exactly when and where it is needed, utilizes all that horse-power otherwise lost by belt-drives and shafting. Often that lost power amounts to fifty per cent. Pay you to save that much, wouldn't it?

Built in such a practical way, and so shielded, that shavings, dust, chips, cannot possibly work into the mechanism. Nothing to bother over about a Hawthorn Induction Motor.

Take time NOW to send for Bulletin 507. It will perhaps give you new light on the lumberman's power-problem. Glad to mail it to you when you write to our nearest branch, as below:

Hespeler

Ont.

The cheapest way to skid and load logs is by steam power. The

Universal Logger

is a combined two line skidder and loader with separate engine for loading with steel skidding boom and steel swinging loading boom. It is self-propelling, spots its own cars and moves rapidly from point to point, saving time and the usual switching expense. Ample water tank capacity is located between the trucks, and the frame is constructed to permit empty cars to pass through the machine for loading by means of its own power. This machine is especially adapted for light steel or wooden rails.

Snow Ploughs The Famous Brazel Patent

Known in every Camp from the Atlantic to the Pacific, as the most satisfactory Snow Plough made.

COMBINATION MODEL, LUMBERMAN'S SNOW PLOUGH, CAN BE USED
EITHER WITH OR WITHOUT RUT CUTTER.

One man to operate. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9' wider than sleigh track or narrower if desired. Height of Mouldboards prevent snow falling back on track. **Brazel Ploughs** cut 6" wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure from an ice road leaving a clean roadbed. Roll up and push entirely away from the road, 12" of loose snow each time the plough passes over.

Sold on their merits. Strongly built and of first class material. Well finished and fully guaranteed.

Illustrated Catalogue and Prices on application.

Reliable Veterinary Remedies

No logging outfit is complete without a supply of reliable veterinary remedies. Getting the wrong kind means the loss of the use of your horses when time is valuable.

Johnson's Veterinary Remedies are guaranteed never to fail when used as directed. You get your money back if they ever do.

They are

Johnson's Horse Liniment No. 1.
A penetrating Alcoholic Liniment. Put up in one gallon jugs, with full directions, per imperial gal. \$4.50

Johnson's Horse Liniment No. 2.
A combination of the best oils used as liniments, imp. gallon . \$3.00

Johnson's Horse Colic Remedy.
A sure and speedy cure for colic. Imperial gallon \$5.00

Johnson's Veterinary Healing Ointment.

Positively the best all-round healing ointment made. In use by the largest owners of horse flesh in Canada. Put up in 2 lb tins, each . . \$2.25 or in 1/2 lb tins, per dozen . . \$3.50

Johnson's Condition Powders. (Concentrated).

Put up in bulk, per lb 30c.

These goods being put up in bulk are more economical than others, as cost of bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Remedies we make a line of medicines for lumbermen, including a strong, penetrating liniment, healing ointment, cholera cure, liver pills, cough syrup, in fact anything in the form of Camp Drug Supplies. We know that there are no better remedies made than those we offer. There may be others nearly as good, but they lack our guarantee. Satisfaction or money back. A trade discount of 10% allowed off all orders amounting to \$100.

Send postal for printed matter.

Boiler Efficiency

The efficiency of your boiler hinges upon the grate service and the consequent cost of steam production.

The "Cyclone" Shaking and Dumping Grate Bar

is adapted to soft or anthracite coal, screenings, etc.—producing a constant steam pressure with any fuel. No other device can evaporate an equal volume of water at so low a cost.

The points of the "Cyclone" deserve investigation by every party interested in expense reduction.

We Make All Kinds of Machinery and Tools for the Care of Saws

The sectional view of our swage shows our new spring bracket which permits the swage to tip forward during the operation of swaging. In this bracket we have preserved our compact construction features. It is practically as strong as a solid bracket, is impossible to get out of order, and is easily adjusted to give any amount of spring desired, or to be rigid and allow no spring.

This new feature of Hanchett Swages still further increases the efficiency of a swage which without this improvement has for a number of years been quite generally conceded to have the lead over any other swage manufactured. The spring bracket, in conjunction with the action of Hanchett dies, proves unusually effective in bending the tooth forward so that it may be faced perfectly with little grinding.

Sectional View of Hanchett Band Saw Swage.
(Patented January 5, 1909.)

With this spring bracket with its perfect adjustments, added to the unusually wide range of adjustment of Hanchett swages, the filer can swage his saws to a nicety, and adjust his swage to place the points just where he wants them, and get any amount of hook wanted.

These brackets will fit all the old Hanchett Swages, so that our old customers can avail themselves of this improvement by purchasing from us the new spring bracket.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

Let us send you our New 1909 Catalog No. 18. It is the most comprehensive and up-to-date Filing Room Catalog in existence. It will interest you. : : : :

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

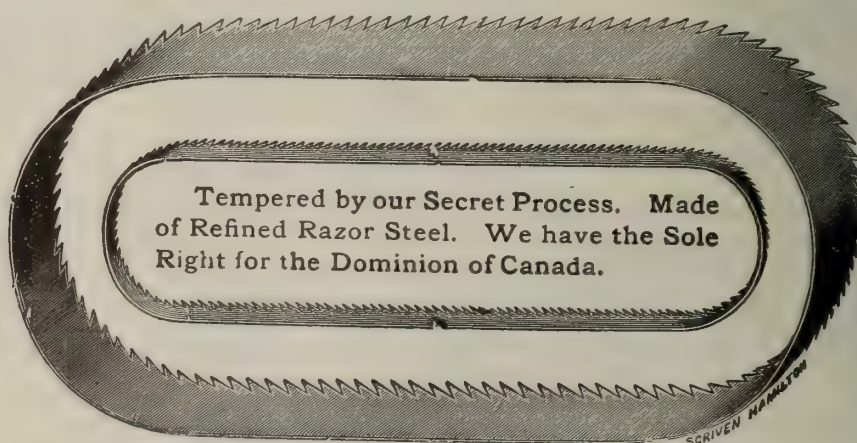

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

JUST OUT

The New Waterous Band Mill

Friction Clutches, etc., etc.

Dodge Manufacturing Co., Toronto, Montreal

Operating with Horses is Expensive!

Patented in Canada and U.S.A.

Dunbar Logging Engine.

Dunbar Logging Engines will haul upwards of 150,000 feet of lumber, depending on the condition of the road which only requires to be made as for horses' operations except that they should be nine feet wide.

In every case there is a large saving over the use of horses. The results to be obtained are not based on theory but have been actually obtained and in some cases the saving has been 75%.

Our descriptive circulars and photos will be gladly sent upon request. They will certainly interest every lumberman who recognizes the importance of economical log hauling.

We also manufacture Shingle Machines, Rotarys, Stock Gangs, Planers and all Saw Mill Machinery.

The Lidgerwood Patent

Hauling Loaded Sleds over a Ridge

SLEIGH HOIST

A machine designed to hoist or lower sleighs loaded with logs, pulpwood, bark or other forest products, in mountain logging.

It handles steadily and under perfect control the largest sleigh loads, on any hill, **no matter how steep**, and up to 3,500 ft. in distance.

Saves horses when used with them. Maiming and killing of horses on steep hills is eliminated; saves the horses from the hardest work, that of taking the empty sleighs up the hills.

Does what horses can not do. The hardest uphill haul costs no more than hauling on the level with horses. Enables bringing timber over heights of land, thus frequently saving long hauls; the improving of small streams; or the absolute loss of stumpage.

It pulls itself about in the woods; uses wood for fuel; and is simple to operate

We now have a representative in Canada, who will examine your conditions and tell you what can be done, free of charge of any nature.

We are Specialists on Lumber and Saw Mill INSURANCE

FOR OVER THIRTY YEARS we have made a close and constant study of this specialty, embracing not only “The Best Protection at the Minimum Cost” in the sense of Policies in the Strongest Companies at the lowest possible rates, but the enhanced Protection of such Policies so worded as to Insure you under whatever form of sale or undertaking you may make with your customers, unaware as you may be of the application of the Canadian Insurance Law in such instances.

We invite inquiry as to the above and our “ADVICE SHEET” system which we originated several years ago for the special convenience of our Lumber Customers.

We personally inspect each of the plants we insure at least twice a year.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 20

Logging Railways Assist Settlement

The importance of lumbering as a factor in the development of the country is known to everyone who lives in a lumbering district, but there are times when it is demonstrated more forcibly than at others and when every one who takes an intelligent interest in public affairs has it borne in upon him that in some of its features the lumbering industry has a greater share in the opening up of a country to commerce than has any other. If an instance were needed in Ontario, it would be afforded by the Canada Atlantic Railway, built primarily to carry J. R. Booth's logs to Ottawa, and now part of a great railway system. Another striking example is given by the case of the timber limits of Vancouver island, which have just been sold by the Esquimalt & Nanaimo Railway, a branch of the C.P.R., to the American Financial Securities Company. These limits are located in the Cowichan Valley and are known to contain timber which is unsurpassed by any on the Pacific coast. The railway was wise in its day in refusing offers for these limits which were much in excess of those they have now accepted. They have sold to a company who have pledged themselves to active development and who will provide great quantities of freight for the branch railway which the C.P.R. will build between the limits and tidewater. This timber, which until now has been growing undisturbed for centuries, will be marketed cheaply and will find its way to Vancouver and thence to the markets of the world. An indirect result of the undertaking will be the development of the Nitinat Valley, one of the most fertile districts on the island. The city of Victoria has pricked up its ears upon hearing the news, and is anxious not to be sidetracked entirely from the commerce which is to result. The timber will go in car ferries from Cowichan Bay to Vancouver. Victoria will never see any of it, unless a railway is built into the Nitinat Valley to tap that district. The Victoria & Barklay Sound Railway will solve this difficulty for Victoria and the people of that city,

if they are alive to their opportunities, will see that it is quickly constructed.

Though this is a case largely of local interest, it is an excellent illustration of what has been going on in many parts of Canada and the United States ever since lumbering was commenced. The logging railway is primarily a local concern, but it is invariably constructed (with a view to the future), with an equipment which will serve for freight and passenger business when the timber begins to grow scarce and the population has increased. Logging railways open up fertile valleys and make it possible to secure timber and agricultural wealth from the soil, which would otherwise remain in a state of nature to the benefit of no one.

Government Undertake Useful Work

The Department of Trade and Commerce at Ottawa is undertaking a work which will be of great value to all Canadian business men. This is no less than the collection and publication of a list of Canadian manufacturers, exporters and producers generally, who desire to extend their trade abroad. Blank forms are now being sent out which are to be returned with the name and address of the firm desiring to be placed upon such a list, and a detailed list of the articles manufactured or produced by it. This list will be given the preference at all times when the names of such Canadian firms are required by intending purchasers abroad. As the information is received at the Department, it will be forwarded to the Canadian Trade Commissioners in the various parts of the world and be systematically indexed so as to be readily available in their respective offices. A circular accompanying the blank forms is being sent to all members of boards of trade, chambers of commerce and trade associations throughout the Dominion.

Nothing of this kind has ever been attempted in Canada, and it will entail great labor upon the Department of Trade and Commerce. It is hoped, however, that the list can be made the basis of a permanent list which will be immediately available at all times in the advancement of the foreign trade and commerce of Canada. The Department hopes to obtain the name of every exporter from the Atlantic to the Pacific, with a detailed list of the goods they are in a position to sell abroad. Through the Dominion Trade Commissioners' service this information will be available at six offices in the United Kingdom, one in France, two in South Africa, one in Mexico, one in the West Indies, two in Australia, one in China, one in Japan, one in Holland, and one in Newfoundland. Such an undertaking will surely meet with the approval and hearty co-operation of all whom it is designed to benefit.

An Estimate of Canada's Timber

Mr. R. H. Campbell, Dominion Superintendent of Forestry, in his annual report speaks in high praise of the Forest Service of the United States and points out that "although the extent of Canada is not less than that of the United States, the forest service of the latter has an appropriation of \$4,640,000 and a permanent staff of over 2,000, while the Canadian forest service has an appropriation of \$100,000 and a permanent staff of about 40. If the Canadian people wish a service equally efficient with that of the United States, they must be prepared to deal much more generously with it than they now do."

Regarding the forest area of Canada, the report says:

"Mr. A. H. D. Ross, lecturer at the forest school of the University of Toronto, was appointed during last summer to collect such statistics as were available in regard to the forests and the timber production of Canada, and the result of his investigations is being published. The reliable information was found to be so small as to leave all calculations incomplete and indefinite. The forest area may, however, be put at between 500 and 600 million acres with a stand of about as many billion feet, but neither these nor any other figures available are entitled to any great reliability in the present state of knowledge of the forests of Canada."

The survey of the Riding Mountain forest reserve is reported to have been completed. "Of a total area of 982,400 acres in this reserve, only 221,319 acres are described as timbered. The timber of over eight inches in diameter at breast height is 210,740,346 feet board measure, and of this poplar forms 54 per cent. and white spruce only 20 per cent. There are only a little over 42 million feet board measure of white spruce. This

reserve is one of those on which there is the greatest demand for timber and wood, and every effort will be made to assist reforestation. Unfortunately the natural reproduction of white spruce, the most valuable tree, is not good, and it will be necessary to resort to sowing or planting if this species is to be reproduced as it should be."

Investigations in the Crow's Nest district were made during the past season by Mr. H. R. MacMillan. Referring to this the report says: "The forests on these great mountain slopes assist in preserving the water supply and form the reservoir for wood and lumber for the Province of Alberta, one of the greatest assets for comfort and happiness that any province can have, and, moreover, on it depends largely the development of coal mining in that province, as without timber, coal mining is impossible, and the requirements for the development of the coal mines along the eastern slope of the Rocky Mountains will be enormous. It is estimated that there are twenty-two and one-half billion tons of coal

to be found in Alberta in the Rocky Mountain district. The mining of such a quantity of coal will require 45 billion lineal feet of mining props, the product of nine million acres for sixty years.

"In the Crow's Nest valley the mines now in operation are using three million lineal feet of mining props and two and one-half million feet board measure of lumber and dimension timber, and in five years more this quantity will probably have doubled, then requiring the product of 66,000 acres. The total area in this valley is 135,680 acres, of which only 21,120 acres are covered by a mature unburned forest, the remainder being entirely denuded, covered with dead standing timber or with young growth. A more thorough and efficient fire patrol system is required, and in order to organize and distribute it as economically as possible, and to administer the forests on an intelligent basis, a timber survey and mapping of the whole eastern slope should be made with the least possible delay."

Strong Arguments in Favor of Perpetual Timber Licenses

The duration of the timber license is an all important subject just now in British Columbia, and operators throughout the province have joined in a movement to bring about the establishment of a system of perpetual licenses, so that they may be able to depend upon controlling a supply of timber which will make it worth their while to carry on manufacturing operations in a conservative and at the same time business-like manner. There are some opponents to be found to this course, and their chief argument is that such a step would encourage speculation, inasmuch as owners of licenses, which would run in perpetuity, would be able to sell them for a much larger sum than licenses which have a limited period of duration, such as twenty-one years, which is provided by the present law. The argument goes further, and claims that speculators would be able to obtain vast areas of timber lands and withhold them from development; that powerful foreign syndicates would be able to invade Canada and secure control of the timber supply and thereby work a grave injury to Canada and Canadians.

It is questionable whether these arguments are not based upon a false idea of the ability of Canadians to look after their own affairs. When it comes to a matter of financing extensive deals or carrying out large undertakings, Canadians of to-day are seldom found in a back seat. The Government of British Columbia may be presumed to be composed of men of good business capacity, who will see to it, that any measure which may be passed in the direction of perpetuity of licenses will be so safeguarded that Canadian interests will be preserved and at the same time developed even to a greater extent than was formerly the case. The royalty will be a weapon to wield in the interest of the people and will be a powerful one for the prevention of extensive speculation. It will

prevent the withholding of limits from development with a view to securing the profits resulting from natural increases in value. Those who advocate perpetual licenses recognize the power of the royalty, and are anxious to let the public know that they desire only perpetual licenses. They are well content to have the royalty matter settled in such a way as to prevent any of the evils which are feared by the opponents of this plan.

The address given recently by Dr. Judson F. Clark before the British Columbia Timber and Forestry Commission bore directly upon this subject and should be read by all who wish to become informed upon the matter. It appears elsewhere in this issue. Dr. Clark has devoted his life to the study of such problems and his remarks are based upon a thorough knowledge of the facts. Briefly summarized, his address advocated perpetuity of title in timber licenses; the establishment of a provincial bureau of forestry under a capable minister, and the creation of timber royalties on a sliding scale for ten years, increasing automatically. His arguments in favor of perpetual licenses were based upon the fact that they would prevent wasteful logging and encourage forestry practice on the part of loggers. This view is accepted very generally by those who are engaged in logging in British Columbia, and it appears to be a most feasible method of instituting a reasonable system of economic forestry. If put into force under a capable department of forestry with a responsible minister at its head, it should work out to the advantage of the owners of the limits and do much to assist in a prevention of wasteful logging. If the investigation by the Timber and Forestry Commission results in the creation of a department of forestry with such duties to perform it should meet with general approval.

Modern Methods of Preventing Fire in Dry Kilns

More advance has been made in the design and construction of lumber dry kilns within recent years, than in probably any other class of lumber manufacturing buildings. Fireproof construction has been adopted in all modern plants and the old hazardous direct fire kilns are things of the past. They have long ago been supplanted by furnace kilns, and these, in turn, by the modern standard fireproof kiln. Much attention has been devoted to the matter of sprinkler and steam jet protection. All this attention and study has resulted in a large reduction of insurance rates and has placed this class of risk in the profitable column instead of the loss column for the insurance companies. No small amount of the credit for this satisfactory state of affairs is due to the insurance companies which specialize upon insurance risks. Their efforts have been directed with vigor towards discovering the safest methods of construction and towards giving the information obtained to all in the lumber business. They have, in short, been far-sighted enough to discover and create a profitable class of business, which existed formerly only in embryo, having practically to be created out of an adverse condition of affairs, and in the creation of which an inestimable benefit has been conferred upon those with whom they do business.

If a concrete instance were needed of the manner in which these companies are working for the benefit of their policy holders as well as

themselves, it is afforded by the investigations which have been made into the utility of sprinkling devices and steam jet equipments. "Lumber Insurance," published by the Lumber Insurers' General Agency, presents the results of such investigations in its columns from time to time. In the September issue the question is discussed in a valuable communication by Alex T. Lumby, in a letter which first appeared in the New York "Journal of Commerce." Mr. Lumby, referring to this subject of the relative efficiency of steam jets and sprinklers, writes in part as follows:

"I have made a considerable study of the subject myself and am strongly of the opinion that the steam jet is an excellent device for the purpose, ranging alongside of sprinklers, and perhaps superior to them. Certainly from a theoretical standpoint the steam jet is superior to the sprinkler, as there is at least a sentiment, if not a demonstrated certainty, that the sprinklers are apt to be obstructed in their operation by the boards loaded on the kiln cars, and sometimes unable to reach the seat of the fire. In this connection it may be of interest to read the report of a fire in a sprinkler equipped kiln which appeared recently in one of the insurance journals; the article was as follows:

"A fire occurred in the sprinklered plant of the E. C. Atkins Company at Illinois and South streets, Indianapolis, at 2 p.m., August 2nd,

in the dry kiln used for drying out lumber for cross-cut saw handles. There were sixteen heads in this room, of which two heads operated, but the fire was so far underneath the lumber that the water could not reach the seat of the fire. The fire was drowned out after three hours' hard work and after several firemen had been overcome by the smoke. The sprinklered alarms operated satisfactorily.'

"I have before me reports of fires in woodworkers, representing between one and two thousand fires, and it may be of interest to have a brief sketch of the conditions that prevailed in the instances where fires occurred in dry kilns with some form of steam jet projection:

"Case No. 1575: Fire originated in dry kiln; protected by steam jets, not automatic. Total loss.

"Case No. 1600: Fire originated in dry kiln; protected by steam jet, not automatic. Total loss.

"Case No. 1705: Fire originated in roof of dry kiln; protected by steam jet, not automatic. Total loss.

"Case No. 1813: Fire originated in dry kiln. Building equipped with steam jets, not automatic. Total loss.

"Case No. 1865: Fire originated in dry kiln; protected by steam jets, not automatic. Total loss. In this case our agent reported in addition to the above that the probable reason for failure of the jets to act was the fact that the fire had gotten too much headway in the interior of the kiln before the assured became aware of the fact that the kilns were on fire.

"Case No. 1911: Fire originated in dry kiln; protected by steam jets, not automatic. Total loss.

"Case No. 1913: Fire originated in dry kiln; supposed from a spark; protected by steam jets, not automatic. Total loss.

"These results would at least be indicative of the indifferent value of non-automatic steam jets and inferentially in favor of the automatic type. The uncertainty of the value of sprinkler protection in the dry kiln is recognized and the doubtful efficacy of non-automatic steam jets is indicated, although not necessarily proved by the failure to operate in the instances named. The advantage is so far with the automatic steam jets, and I believe it was a wise move on the part of various southern rating organizations to allow the generous reduction in rate accorded under existing tariffs for the presence of automatic jets.

"Ten years or more ago, when the hazard of kilns was made the subject of investigation and report and suggestion to the rating organizations, looking to such improvements as would reduce the fire hazard, this department of woodworking risks was regarded as hopelessly bad and to be declined and treated as prohibited as far as possible. The rate was ten per cent. for a kiln, practically irrespective of construction and protection, and even at that high figure they were written, if at all, at a serious loss. The value in utility of intelligently studying the subject has been well demonstrated, and perhaps that can be set forth most graphically by the statement that where kilns are constructed of standard fire resistive materials and equipped with protective features of established efficiency, including automatic jets, rates of $1\frac{1}{2}$ per cent. on the building and $2\frac{3}{4}$ per cent. on the contents are now made. The saving to the assured by the difference between these figures and the flat 10 per cent, previously prevalent must represent a very considerable amount."

Government Statistics of Crown Timber Land Operations

Much valuable information regarding the Crown Timber resources of the Dominion is contained in the report of the Department of the Interior for the fiscal year ending March 31, 1909, which has just been issued. The returns, unfortunately, are grouped with those of the grazing and irrigation departments, so that in some cases the actual results so far as timber is concerned, are not shown.

The total revenue from timber, grazing and irrigation received at the Crown timber agencies, together with the ruling price of lumber and the number of mills in each agency, is summarized as follows:

Agency.	Total Revenue.	Average Price at Mills.	Licensed Mills.	Portable Mills.
Calgary	\$24,615	\$14.91	16	18
Edmonton	22,080	13.70	9	17
Prince Albert	43,229	17.54	6	6
Winnipeg	93,411	14.55	36	21
New Westminster	55,736	14.20	16	..

The following quantities of building material were manufactured and sold under Government license during the year in the above mentioned agencies:

	Manufactured.	Sold.
Sawn lumber, feet B.M.	162,940,499	183,375,022
Shingles	10,000
Shingle bolts, cords	18,110	19,226
Laths	20,120,150	31,979,210

In the previous year the figures were:

	Manufactured	Sold.
Sawn lumber, feet. B.M.	267,532,730	180,909,384
Shingle bolts, cords	9,519	7,597
Laths	29,551,839	17,059,889

The areas of timbered lands under license and permit in the provinces of Manitoba, Saskatchewan and Alberta, and within the Railway Belt in the province of British Columbia, on March 31, 1909, were as follows:

	License.	Permit.
Manitobasquare miles	1,207.83	710.43
Alberta	2,655.45	357.94
Saskatchewan	2,338.06	422.02
British Columbia	2,089.00	23.57
Totalsquare feet	8,290.34	1,513.96

The receipts on account of timber on Dominion lands amounted to \$245,217, made up as follows: rent, \$60,171; royalties, \$103,207; permits, \$65,297; seizures, \$16,541.

The Inspector of Crown timber offices, in his report, says: "It would be a practical impossibility to put a stop wholly to the illegal cutting of

timber on the public domain, owing to scattered settlement and the wide area covered by timber. Special attention has been paid to the operations at portable sawmills and to the cutting of timber as a speculation.

"Steps are being taken to give closer supervision than has taken place in the past over the operations of the holders of timber berths by license and permit. They will be required in future to conform more strictly to all the requirements of the regulations in the matter of the keeping of bush records of their cutting, of marking the timber cut, by a stamp approved by the department, and furnishing at the end of each season of cutting a ground sketch, showing the place or places where timber was cut on the berth. Regular inspections will be made of the sales records of the millmen and stock will be taken of the lumber in their possession..

"Very little lumber is now brought in from the United States. Apart from that imported by the Grand Trunk Pacific Railway for construction purposes the amount during the past year would not exceed 7,000,000 feet, board measure, of which quantity there would be less than 1,000,000 feet of hardwoods, the balance fir, principally from the State of Washington.

"The cut of logs this past year on Dominion lands has been lighter than for some years previously. The falling off occurred largely in the railway belt in British Columbia, where the millmen obtained their supply chiefly from the lands of the Provincial Government, the reason for this being that owing to the much heavier ground rent charged by the province for lands held under license it is cheaper to carry Dominion timber for which only a nominal ground rental is charged.

"I would again respectfully draw the attention of the department to the large number of roof poles and fence rails authorized to be cut by settlers under free permits issued to them. As pointed out in my last annual report, this class of timber is not to any extent now used by the settler, sawn lumber (scantling) is almost wholly used in roofing, and posts and wire fencing. In my opinion it would be in the public interest to withdraw the privilege from the settler of cutting this class of timber, which takes a young healthy tree in the manufacture of each piece."

From lands held under permit the manufacture and sale of timber products was as follows: Lumber manufactured, 18,868,961 feet; lumber sold, 15,753,216 feet; shingles manufactured, 296,000; shingles sold, 208,000. The timber material covered by permits during the year and during the previous year was as follows: Lumber and logs, 50,152,088 feet; 1908, 57,170,935 feet; roof poles, 1,520,847; 1908, 1,654,940; fence posts, 2,579,443; 1908, 2,831,028; fence rails, 6,329,020; 1908, 6,522,425; cordwood in cords, 106,036; 1908, 190,202; mine props, 3,000; shingles, 51,000; shingle bolt, cords, 923; railway ties, 601,652,

Progressive Lumbering in New Ontario

Keewatin Lumber Company, formed in 1906, Conducting an Extensive Business—Modern Plant and Business-like Principles lead to immediate Success

One of the most important sawmills in New Ontario is that of the Keewatin Lumber Company, Limited, situated on the north shore of the Lake of the Woods, between the thriving towns of Kenora and Keewatin. This company was formed in the year 1906 and bought out the Keewatin Lumber & Manufacturing Company, whose mill, situated on the west side of Keewatin, was destroyed by fire in the fall of 1905.

Messrs. E. W. Backus and W. F. Brooks, of Minneapolis, Minn., who are among the best known lumbermen in the United States, and whose knowledge of the lumber business will compare favorably with the best, as they have spent the whole of their business careers in the lumber business, were prime movers in the formation of the new company and now retain the positions of president and vice-president respectively.

The site chosen for the new mill was an extremely favorable one on a peninsula at the north of the Lake of the Woods, situated about a

one six-foot horizontal re-saw, one Big Diamond double edger, and one single edger, trimmer, slasher, etc., in addition to a complete lath manufacturing outfit. The power is secured from a 750 h.p. Buck Eye engine. The sorting shed is a very large one, being about 320 feet in length, and the sorting has very careful attention, the large amount of accommodation giving special opportunity for this. It is largely on account of the care given to the sorting of the lumber that this company has built up its well known reputation.

The planing mill is driven by a 250 h.p. engine, and has a complete equipment of seven machines for manufacturing every description of lumber. It is capable of putting through 150,000 feet every ten hours.

Keewatin Lumber Company—View of Sawing Mill and a portion of Sorting Shed.

Keewatin Lumber Company—The Office

Keewatin Lumber Company—Trucks Loaded ready for Piling.

mile and a half from Keewatin and two miles from Kenora. It is connected with the main line of the Canadian Pacific Railway by a short siding which belongs to the company. On account of its isolated position the danger of fire is greatly eliminated, and, being nearly surrounded by water, it is especially suitable for boom accommodation.

The company draws its supply of logs from large limits tributary to the Lake of the Woods and Rainy Lake, the booms being brought to the mill by their fine boat, the S.S. "Mather." These limits contain an immense quantity of white pine timber of excellent quality, also a large supply of Norway and spruce, and it is calculated that the present source of supply is sufficient to keep two large sawmills running for fifteen years.

The building of the sawmill was commenced in June of 1906, and was completed by September of the same year. Since then it has been added to considerably. The present capacity of the mill is 250,000 feet per day of twenty hours, and its equipment consists of two band saws,

There is also a large tie mill belonging to the company with a capacity of 5,000 ties per ten hours; this mill also contains a horizontal re-saw and a lath manufacturing outfit.

The whole of the yards are built up with elevated tramways, and great care is given to the piling in order that lumber may be sent out in first-class condition. Both the position and the arrangement of the piling accommodation are exceptionally well arranged, so that by a single glance through the various alleys the officials are able to tell how their stock in the various classes, sizes and lengths of lumber is varying.

The loading platform is capable of holding thirty cars, and a well trained force of loaders is always on hand, so that the final grading is done at the car doors, thus eliminating the chance of inferior grades being shipped in error.

Mr. D. McLeod, who has had the management of the company since its start, was previously connected with the old Keewatin Lumber &

Manufacturing Company, and has built up the business by careful and conservative methods. He takes a special pride in seeing that a good grade of lumber is shipped and, more especially, that prompt shipments are made. The company has gained an enviable reputation in this latter respect, so much so that Winnipeg merchants, finding themselves short of any particular class of lumber, are in the habit of relying upon a tele-

Keewatin Lumber Company—The Planing Mill.

gram to the company, feeling certain that in this case the lumber will be shipped within the next 24 hours if it can possibly be obtained.

In every respect the plant of the Keewatin Lumber Company, Limited, is one of which New Ontario should be very proud. The success of the company will surely increase from year to year as its products and business methods become better known.

Advanced Duty Shuts B. C. Shingles out of U.S.

Mr. J. G. Woods, a prominent shingle manufacturer of Vancouver, in a recent interview expressed strong objection to another interview which appeared in a Vancouver paper regarding the effect of the increase of 20 cents per thousand in the duty on shingles entering the United States. Mr. Woods was also upheld in his views by Mr. Albert Cotton and Mr. H. Davidson, the latter general manager of the Hastings Shingle Manufacturing Company, and the former a well known manufacturer also.

In the course of his remarks Mr. Wood said:

"The advance of 20 cents per thousand shingles in the import duty of the United States makes a very great difference to the business of

ington, but it costs us materially more to produce a high grade article than it does the Washington mills.

"In the interview referred to it is stated that shingles are now selling in Vancouver at about \$1.90 per thousand. If that is correct, out of that \$1.90 must come all selling charges, commissions, cash discounts and occasional losses, which easily amount to 15 cents per thousand. This brings the net amount received by the mill to \$1.75, and it costs me \$1.75 to manufacture, and I doubt very much if any of the large mills are to-day netting \$1.75 per thousand.

"So far as shipments to the United States are concerned, I am positive that no manufacturer in Vancouver nets \$2 per thousand on 16-inch shingles. As a matter of fact the net amount received is so far below \$2 that I for one am rather ashamed to say how much. I am not in favor of the over-drying of shingles, as we want our shingles to go to the consumer in as good condition as possible."

B. C. Commission Concludes Hearing of Evidence.

The British Columbia Timber & Forestry Commission have concluded their sittings, having devoted 27 days to the work. Mr. J. A. Harvie, K.C., who represented the British Columbia Logging & Lumbermen's Association, complimented the commission at the conclusion of its sittings upon the impartial hearing which had been accorded to all, and he was given permission by the members of the commission to submit in writing an address which he desired to deliver before the commission, with the object of emphasizing some features of the evidence.

An interesting part of the evidence at the last session was that given by Secretary Anstie, of the British Columbia Logging & Lumbermen's Association. Mr. Anstie stated that 1,851,000,000 feet was the capacity of all western Canadian mills shipping into the Northwest market, and that the consumption of the Northwest market last year was only 800,000,000 feet. On this basis he figured that the present 10-hour capacity of the mills of British Columbia, Alberta and Saskatchewan was sufficient to supply more than double the demand. In 1907 the mills of British Columbia had shipped to the Northwest market 645,000,000 feet. Last year their shipments were 20 per cent. less. The capacity of the British Columbia shingle mills was 712,000,000 shingles daily.

Mr. A. Hamilton, who appeared before the commission on behalf of the Vancouver Trades and Labor Council, voiced the views of the wage-earners and the consumers. He opposed the granting of any extended tenure though he did not object to licenses being made renewable from year to year. He advocated abolishing the royalty and raising the rental sufficiently to make up any deficit in revenue.

All that remains now for the commissioners to do is to consider the evidence and draw up their report. This will take a considerable time, as the evidence was very extensive. Their findings will be awaited with great interest, because it is expected that upon them the Government will base its future timber policy, the object of which should be to conserve the people's interests; to protect those who have capital invested in the lumbering industry; and to guard the interest of those who are dependent upon the latter for their employment.

Cowichan Valley Timber to be Operated.

One of the largest timber transactions ever carried out in Canada has been concluded, whereby the American Finance & Securities Company, of New York, secure 54,000 acres of splendid timber lands on Vancouver island. These limits were a part of the E. & N. Railway grant and are estimated to contain five billion feet of fir. The price paid was approximately \$1,500,000. The timber is mainly fir, with about ten per cent of cedar, hemlock and spruce. The trees are reported to average 40 inches in diameter and to be practically free from branches or limbs to 175 feet from the ground. The areas practically encircle Cowichan lake. Excellent fire protection is said to be secured by the timber being in the fog belt and the underbrush being a heavy growth of salal.

The purchasers have agreed to develop the property actively. The railroad company has contracted to build a railway from Cowichan lake to tidewater on Cowichan bay, a distance of 22 miles. It is expected that this will be completed next year, when the purchasers agree to commence operations on a large scale. One million dollars will be spent on development, and a mill will be erected at tidewater with a capacity of 100,000,000 feet per annum. An additional \$500,000 will subsequently be spent on a pulp mill, in which the hemlock and spruce will be manufactured into pulp. The company will operate its own tugs on the lake for hauling log booms to the landing, where the logs will be loaded on cars and shipped to the mill. It is stated that the mill and the pulp plant will give employment to at least a thousand woodsmen, without considering the large number who will be employed in the mills.

Keewatin Lumber Company—One of the 25 Lumber Allies.

the British Columbia shingle manufacturers, so much so that it practically shuts off the American business. For the past two years I have not made 20 cents per thousand or anything like that amount on the shingles I have shipped to the eastern States. These remarks refer to the 16-inch shingles that go into the New England States.

"Our shingles will command a higher price than those made in the States just so long as our grades are superior to those produced in Wash-

Mr. James W. Davidson, president of the Crown Lumber Company, of Calgary, reports that there is a heavy absorption of lumber at present in the prairie provinces, and that the outlook for the sawmilling industry of British Columbia is correspondingly bright.

Montreal Trade Somewhat Quiet

**General Tone however Improving — Stiffening
Tendency in Hardwoods—Shingles Moving Slowly**

Montreal Office of the "Canada Lumberman."
October 12th, 1909.

The lumber market in Montreal is not strongly active just now, and, while the general tone is improving, many dealers find little difference from the situation of the past few months. Collections are reported very slow in some quarters. Conservative dealers concede that with the present winter over, the prospects for improvement are bright. On the other hand, a great many dealers feel that this fall will be a very good one in lumber circles. Enquiries, they state, are coming in freely and prices are slowly evening up. There is a feeling, too, that the market must advance in keeping with the increase in shantymen's wages and camp supplies.

Prices on some classes of stock are ruling slightly lower; culls and common lumber of all kinds show little tendency to advance, but shop and good lumber range from 10 to 15 per cent. higher than the prices of a few months ago. White and red pine lath, with the exception of the holdings of some local dealers, are very scarce and are commanding higher prices. There is only a fair demand for shingles in Montreal and vicinity. Dealers, as a general rule, do not stock heavily, since their use in Montreal is practically prohibited, and orders filled are chiefly for near-by points. Second clears are held at \$2.25, and there are more enquiries for this grade than for the better class. Manufacturers still have on hand large quantities of shingles. Spruce is one of the best selling lines to-day, and there is very little on the market. Pine in the better grades is in fairly good demand. Prices are firmer and the outlook is for a still further advance. Southern pine is also very active just now, and dealers anticipate higher figures.

The local hardwood market is showing a decided tendency to stiffen. This is the outcome of the approach of the season for inside construction, where this class of wood is chiefly in demand. Oak and chestnut are reported fairly scarce and have advanced from \$3 to \$5 per 1,000. Firsts and seconds, quarter white oak, are quoted at from \$85 to \$87. Chestnut, 1st and 2nd, 1-inch, at \$50 to \$52. Log run mill culls, maple, is in good demand and averages from \$18 to \$20. There are numerous enquiries from the American side for maple white on two faced, and this quality is hard to obtain: it is quoted at from \$31 to \$32.

The following are revised, current wholesale prices for Montreal:

1-in., 2-in. and 3-in. pine log run mill culls out	\$27.00 to \$30.00
1-in., 2-in. and 3-in. pine log run dead culls out	24.00 to 26.00
Pine "O" culls	13.00 to 14.00
Pine mill culls	17.00 to 19.00
Spruce flooring, sheeting, etc., No. 1	24.00 to 26.00
Spruce flooring, sheeting, etc., No. 2	19.00 to 21.00
Merchantable, spruce boards	16.50 to 17.50
2-inch merchantable spruce	16.00 to 17.50
Cull spruce boards	14.00 to 15.00
2-inch spruce culls	14.00 to 15.00
1½-inch spruce mill culls	15.00 to 16.00
Spruce scantling, 2x 3, 12 and 13 feet	16.00 to 17.00
" " 3x 3, 12 and 13 feet	16.00 to 17.00
" " 3x 4, 12 and 13 feet	16.00 to 17.00
" " 2x10, 12 and 16 feet	19.00 to 21.50
2-inch (scant) x 9, fifth quality, N.Y. "outs"	16.50 to 18.00
Oak, 1sts and 2nds, quarter white	85.00 to 87.00
Chestnut, 1sts and 2nds, 1-inch	50.00 to 52.00
Birch, 1-inch log run, mill culls out	18.00 to 20.00
Maple, 1-inch log run, mill culls out	18.00 to 20.00
Basswood log run, mill culls out, 1x4 and up, winter sawn	24.00 to 26.00
Basswood log run, deal culls out, 1x4 and up, winter sawn	20.00 to 24.00
Laths, mill run, spruce, 1¾-inch x ¾-inch, 4 feet	3.00 to 3.25
Laths, pine, No. 1	4.00 to 4.25
Laths, pine, No. 2	3.25 to 3.50
Laths, pine, No. 3	2.50 to 2.75
Shingles, clear	2.90
Shingles, 2nd clear	2.25
Shingles, extras, 1's	1.50
Hemlock boards, mill run	14.50 to 16.50
Hemlock culls	13.00 to 14.00

Pulpwood Export Restriction on Crown Lands.

According to a statement made recently by Premier Gouin, the restriction of the export of pulpwood from the Province of Quebec will be confined to that cut from Crown lands. This will permit of the export of large quantities cut on private lands, which, Sir Lomer Gouin stated, the Quebec Government have no power to prevent from being exported. This power belongs to the Dominion Government. In regard to the pulpwood cut upon Crown lands, he stated further that the Government's intention was to prohibit any export of unmanufactured pulpwood, but not to impose an export duty. It will be made a condition of the permits that all wood cut shall be manufactured in Canada. People applying for permits will have to sign an agreement not to export unmanufactured pulpwood, and if they violate the agreement their licenses will be cancelled. It is generally believed in Quebec Government circles

that this will be followed by a Dominion law applying a similar restriction to all pulpwood, whether on private lands or on Crown lands.

At a recent meeting in St. John's, P.Q., Sir Lomer Gouin, Premier of Quebec, announced that increased charges would be made for timber cutting licenses, commencing on Sept. 1 next year. The increase will date, according to the Premier's plans, from the time of the expiration of present contracts between the Government and the lumber merchants. The Premier announced that it was hoped that the increased charges would increase the revenue by from \$200,000 to \$300,000.

The following comparative statement of timber measured and culled has been issued by the Quebec Supervisor of Cullers' Office, under date of October 6:

	1907	1908	1909
Waney white pinecubic feet	1,036,520	965,720	692,440
White pine	130,160	131,880	57,520
Red pine	8,400	8,200	8,680
Oak	294,800	469,920	504,360
Elm	212,360	86,440	107,960
Ash	11,200	4,400	520
Birch and maple	63,760	59,880	57,240

P. D. Gordon Finds Good Business in the West.

Mr. P. D. Gordon, of the firm of Mason, Gordon & Company, Montreal, who returned recently from a business trip as far west as Edmonton, reports that business conditions throughout the West are unusually promising. This was Mr. Gordon's first visit to Edmonton, and he was greatly impressed with the city's prospects. During his journey Mr. Gordon covered nearly 2,000 miles of wheat producing country "and," he says, "like everyone else who goes to the Northwest at the present time, I found everything on the boom, owing to the enormous crop of wheat which has been harvested and is now being threshed and marketed."

"Every merchant in any line of trade, whether lumber or otherwise, is in the best of good humor, owing to the prospects ahead, and I am quite certain that, with another year similar to 1908 and the present one, the future of the Northwest will be well assured. Not having gone through to the Pacific coast on this trip, I did not come in contact with any of the lumber mills, but from reports which we have from our Pacific coast manager, the mills out there are looking forward to better times and also better prices."

"Owing to the conditions in the West, and also the existing conditions in the East, the lumber trade in this section of the country is on very much better footing than it was early in the present year, and the prospects are, in my opinion, that the year 1910 will be fully equal to the year 1907, which was the banner year in the lumber trade of Eastern Canada."

Mr. Gordon is now on a trip through the southern States, visiting the yellow pine territory, and will wind up at Savannah, Ga., where, the latter part of this month, his firm will load two cargoes of yellow pine timber of about one million feet each.

Personal and Trade Notes from Montreal.

Mr. C. A. Spencer has just returned from a trip through Ontario, where he has been placing some of his eastern stock and introducing a specially manufactured line of kiln dried spruce flooring, sheeting, etc., which is face-polished and bundled.

Mr. A. P. Beaupre, managing director of the Eagle Lumber Company, is at present superintending the construction of the boiler house in connection with the erection of the company's new mill at Rapide-de-L'Original, Que., and expects to be away two weeks.

At the present time the water front presents a bustling scene of activity and lumber dealers report a great difficulty in obtaining cars as they require them. They are held for grain and perishable goods, with lumber products expected to wait for a slacker season.

Mr. Thos. MacKarell, of Ottawa, returned recently from Liverpool, and through Mr. Russel, manager of the Montreal office for Thos. MacKarell & Company, we learn that in his estimation the lumber prospects in England are gradually brightening up and there is every reason to expect better reports in the future.

The question of why Montreal dealers should be forced to go away up to the Georgian Bay districts for their supply of maple and birch floorings, was propounded to the "Canada Lumberman" recently. And really it does seem a conundrum when one considers that the surrounding district is richly supplied with these timbers, and especially so in the case of birch.

The Eagle Lumber Company, Montreal, have under construction a new sawmill at Rapide-de-L'Original, Que. The mill will have a capacity of from 4,000,000 to 6,000,000 feet of spruce during a season's run. Shingle machines will be installed with a daily output of 300,000

per day, and provision will also be made to turn out cedar and hemlock railway ties. Madison & Williams, Limited, of Lindsay, Ont., are supplying a portion of the sawing machinery, and E. Leonard & Son, of London, have a contract for installing the boilers and engines. The mill will be one of the most modernly equipped in the district.

Lumbermen are getting a better service along the harbor front than ever before, due to the new harbor terminals. Under the old regime, cars were wont to be placed anywhere from three to four sections away from where they were required. General satisfaction is expressed also with the new sheds. Lumber stored on the docks is afforded protection now, and can be landed at outside points in better condition.

British Columbia lumber companies have had their agents in Montreal recently, and succeeded in inducing a large number of French-Canadians to move to the West at the expense of their companies. These men are taking their families with them and will engage in the lumbering business. The Fraser River Lumber Company, Limited, of Fraser Mills, B.C., recently engaged a large number of workmen, who left on a special train for the West.

Canada's Export Trade for 1909.

Statistics of Canada's trade in wood products with the United Kingdom and with the United States for the fiscal year ending March 31, 1909, and for previous years, are given in the following tables, which have been issued by the Department of Trade and Commerce.

The exports to the United Kingdom were as follows:

Articles	1907 (9 mos.)	1908	1909
Wood, unmanufactured—			
Logs	\$ 38,948	\$ 30,366	\$ 19,164
Lumber, basswood, butternut, hickory	5,832	13,691	6,761
Deals, pine	1,521,931	1,588,249	1,617,354
Deals, spruce and other	6,414,045	6,057,286	4,782,490
Deal ends	279,327	298,089	287,713
Planks and boards	1,215,421	1,562,047	1,469,768
Joists and scantling	428,614	463,285	354,668
Staves and headings	32,008	53,962	19,614
All other lumber	132,232	170,877	195,027
Shooks, box			
Shooks, other	223,132	108,617	17,070
Timber, square, Ash	1,926	24,525	9,484
Birch	86,335	123,875	110,757
Elm	266,753	212,183	134,435
Oak	245,770	400,761	211,884
Pine, red	95,116	6,097	45,579
Pine, white	857,320	993,095	683,995
All other	9,628	32,647	54,134
All other wood unmanufactured	11,102	1,094	4,226
Totals, wood, unmanufactured	\$11,865,440	\$12,140,746	\$10,024,123
Wood, manufactured—			
Household furniture	\$ 54,900	\$ 47,953	\$ 55,661
Doors, sashes and blinds	64,474	105,829	56,985
Matches and match splints	37,224	82,518	53,514
Spool wood and spools	45,450	22,326	40,778
Wood pulp:—			
Chemically prepared		21,624	342,446
Mechanically prepared		463,575	742,274
All other wood, manufactured	132,281	242,699	190,092
Totals, wood, manufactured	\$ 892,938	\$ 986,524	\$ 1,481,750
Total wood and manufactures of	\$12,758,378	\$13,127,270	\$11,505,873

The exports to the United States were as follows:

Articles	1907 (9 mos.)	1908	1909
Wood, unmanufactured—			
Bark for tanning	\$ 31,481	\$ 34,215	\$ 122,118
Firewood	48,921	83,054	77,458
Hoop, hop, telegraph and other poles	82,708	116,424	43,896
Logs, Elm	464	3,973	8,136
Hemlock	445	31,489	31,797
Pine	2,505	2,894	20,981
Spruce	146,345	101,231	109,784

Destruction of Manly Chew's Yard at Midland.

A disastrous fire broke out recently in the lumber yards of Manley Chew, at Dollartown, just outside of the town of Midland, Ont., and burned over twelve acres of yards, causing a loss of \$298,000, which was fully covered by insurance. About 13,000,000 feet of lumber were destroyed. The fire started, it is supposed, from a spark from the burner, as it originated in the nearest pile in the yard to the burner and in direct line from it. The wind was blowing from the mill towards the lumber yard. This was a fortunate circumstance, because it prevented the mill from being destroyed.

The losers were as follows: The Turner Lumber Company, Toronto, \$125,000, fully covered by insurance; Munns & Cochrane, Sudbury, about \$90,000, fully covered by insurance; E. B. Foss & Company, Bay City, Mich., \$28,000, fully covered by insurance; Manley Chew (lumber), about \$15,000, fully covered by insurance; Manley Chew (trams, etc.), about \$15,000, partially covered by insurance; The Log Pickers' Association, \$25,000, fully covered by insurance. The Log Picker's Association is an association formed of practically all the lumbermen of Georgian Bay for the purpose of gathering logs which had been lost from the rafts. The logs are taken to Midland and there sawn on joint account.

The Turner Lumber Company's insurance was spread over a number of companies, as follows. Adirondack Fire Insurance Company, New York, \$5,000; London & Lancashire Fire Insurance Company, \$8,000; Queen Assurance Company of America, \$7,000; North British & Mercantile, \$7,000; Liverpool & London & Globe Insurance Company, \$14,500; Manitoba Assurance Company, Montreal, \$2,500; St. Paul Fire & Marine Insurance Company, \$5,000; Lumber Insurance Company of New York, \$10,000; Guardian Assurance Company, Limited, London, Eng., \$8,000; Yorkshire Fire & Life Insurance Company, York, Eng., \$8,000; Royal Insurance Company, Limited, of Montreal, \$15,000; Phoenix Assurance Company, of London, Eng., \$13,000; Sovereign Fire Assurance Company, of Canada, \$1,000; Canadian Fire Insurance Company, \$4,500; Richmond & Drummond Fire Insurance Company, Richmond, Que., \$2,500; Phoenix Assurance Company, of Brooklyn, \$4,000; total, \$125,000.

A more satisfactory state of affairs with regard to cars is reported this fall than last year by New Westminster lumbermen. In the autumn of 1908 it was almost impossible to obtain cars for lumber transportation, as the prairie farmers had them all tied up for their wheat crop, but the railroads have been able to keep up with the extraordinary demand for cars from both industries this year.

Death Summons N. A. Rhodes of Amherst, N. S.

The death occurred recently at Amherst, N.S., after an illness of little more than one week, of Mr. N. A. Rhodes, vice-president of the Rhodes-Curry Company, Limited, and one of the best known and most highly esteemed business men of eastern Canada. Mr. Rhodes was returning from a trip to Sydney, when he was taken ill on the train. Several specialists were summoned and an operation for appendicitis was found necessary. After the operation was performed it was expected that Mr. Rhodes would soon recover. Other symptoms developed, however, and in spite of the most skilful attention Mr. Rhodes passed away.

Mr. N. A. Rhodes was a self-made man in every sense of the word having lost his parents at an early age and been thrown on his own resources when ten years old. He was born in Amherst, N.S., in 1845. After learning the carpenter trade, he went to the United States, where he remained for ten years, during five years of which he held a responsible position as superintendent, with a large building and contracting firm.

In 1877 Mr. Rhodes returned to Amherst and engaged in the manufacture of building materials. Later, he took into partnership his brother-in-law, Mr. N. Curry, who became president of Rhodes, Curry & Com-

The Late N. A. Rhodes, Vice-President Rhodes Curry Co., Limited, Amherst, N. S.

pany, Limited. The business of this company is varied in character and includes the operation of saw mills, planing mills, lath mills, shingle mills, brick works, car works, machine works and foundry.

Mr. Rhodes also held large interests in other enterprises. He was half-owner in a large lumber concern at Sheet Harbor, N.S., where he and his partner, Mr. Curry, operated on a large scale. He held a large interest in a Newfoundland property, which was subsequently sold to a Boston firm for a large figure, and he is also interested in other lumber properties.

Mr. Rhodes was a director of the Misaquash Marsh Company. He was also a director of the Maritime Heating Company, and was largely interested in the New Brunswick Petroleum Company. As one of the Governors of Acadia University at Wolfville, N.S., Mr. Rhodes took an active interest in the progress of that institution. Mr. Rhodes did not seek public office, but his popularity as a citizen was evidenced by his being elected in 1904 as mayor of Amherst, N.S.

Sudden Death of Hon. Wm. T. Pipes.

The sudden death of Hon. W. T. Pipes, Attorney-General of Nova Scotia, will cause great regret among all who were acquainted with him. His death was the result of apoplexy and came with dramatic suddenness, while he was visiting friends in Boston. Hon. Mr. Pipes was a close friend of the late N. A. Rhodes, and had just referred sorrowfully to the death of his friend when he was himself stricken.

About six weeks ago Mr. Pipes left for Regina to attend the meeting of the Dominion Forestry Association, of which he was one of the vice-presidents. He was recently appointed a member of the commission for the conservation of the natural resources of the Dominion. During the last few years Mr. Pipes has given much time and thought to the timber resources of Nova Scotia, and early in June had visited Toronto and engaged the services of Dr. Fernow and other experts, who are now at work making a survey in the province of its forest lands. After the convention, Mr. Pipes left for Vancouver, Seattle and other Canadian

and American cities on the Pacific coast. He spent some days in San Francisco, then crossed the continent to Washington, D.C., where he collected data in reference to the reforestation scheme.

William T. Pipes was born at Amherst on April 15th, 1850. He received his preliminary education at the Amherst Academy, after which he was graduated from Acadia College and called to the Bar in 1878. After a long and successful political career he was appointed after the last election to the position of Attorney-General of the Province of Nova Scotia, with a seat in the Lower House.

Mr. Pipes was largely interested in many of Amherst's industries, being a director in the Amherst Boot & Shoe Company, Douglass & Company, and a large shareholder in the Rhodes-Curry Company and other industries. He was also largely interested in lumber properties in different parts of the province.

The death occurred recently of Mr. Clifford A. Thompson, a leading lumberman of Oxford, N.S., at the age of 55.

Canadian Pulpwood in U. S. Markets.

Editor "Canada Lumberman":—

Dear Sir,—My article in the "Canada Lumberman" of Sept. 1st seems to have awakened a great deal of interest. I have received a great many letters from Ontario, presumably from parties who own wood lots. One man writes: "I have six car loads of poplar pulp for sale; do you use such material in your mill?" Another writes: "Can you give me the names and addresses of paper manufacturers on your side, who are in the market for imported wood? Am in the pulpwood business and would like to correspond with them if prices are right." Another writes: "Would like to contract twenty cars of clear spruce, in car lengths, 30 feet and 35 feet long, 5-inch and 6-inch at top end. Also, could get out a large amount of poplar wood."

I would like to reply to these people, through the columns of your paper, as follows: "place an advertisement in one of the American paper trade journals. If unable to do so individually, do so collectively. In other words, club together." To Americans who are in the market as buyers, I have this to advise: "place an advertisement in the 'Canada Lumberman' and let your requirements be known."

In comparing Canadian and American prices, the Canadian export duty and the long or short haul by rail must be taken into consideration when quoting prices at point of delivery. Now, a word in regard to the state of the market. In the early fall of 1908, forest fires swept over a large part of the woodlands in the Adirondacks. Paper and pulp mill men, and others, are cutting this timber at the present time to save it. Obviously, this is placing a large amount of domestic wood on the market. Not only for the present year, but for one or two years to come. I can easily give the name and address of every mill owner, or company, in this part of the State, who are in the market as buyers, and will readily do so.

Any Canadian engaged in the pulpwood business who wishes the names and addresses of parties on this side who are in the market for imported wood, can get the information by enclosing a Canadian five-cent piece, to cover cost of postage, stationery and trouble of writing. A certain number of mills here get their wood wholly, or in part, from their own timber limits; and, again, other companies are compelled to buy every cord they use.

George B. Oberton,
North Bangor, N.Y.

No more concise and logical presentation of the pulp situation has been put into words than that of Mr. P. J. Loughrin, one of the original advocates of an export duty on Canadian raw products, particularly lumber. Mr. Loughrin in an interview discussed the situation in detail, and concluded as follows: "You must keep in mind that there is no party politics in all this. It is a national question. President Roosevelt called a conference for the preservation of natural resources. Canada was represented at it, and there was a great hurrah, but the moment that Canada attempted to conserve its natural resources of pulpwood by insisting upon local manufacture, at that moment the Government at Washington undertook to punish us by putting a countervailing duty on our pulpwood products."

"Don't you see how it all works out? It is all a matter of bargain and trade. We have the raw material; we therefore control the situation. They may put up a bluff of punishing us with an import duty upon our pulp products, but, mark you, we have the whip hand, and our friends across the line will eventually adjust their tariff to the needs of the situation."

Senator D. J. King, of Chipman, N.B., John E. Moore, Dr. J. H. King and party are on a trip in British Columbia. Senator King will proceed to the coast and on his return trip will visit Edmonton. This is Senator King's twelfth trip to the coast. Mr. Moore will remain in the West for three weeks.

Lumber News from New Brunswick

Limit Holders Object to Five Inch Cutting Rule —Busy Season Expected in Woods Operations

A Campbellton, N.B., dispatch states that present indications point to a busy season in lumber operations, and probably the largest cut yet made will be the result. The Shives Lumber Company are planning to get out about 35,000,000; the Wm. Richards Company, about 28,000,000; Chaleur Bay Mills, about 12,000,000, and the Dalhousie Lumber Company, about 15,000,000. This, with the smaller operations of Beringer & Chapin, W. H. Miller and B. A. Mowatt, will mean considerably over 100,000,000 to come through the Restigouche boom next season, the largest in its history. The cut this season was about 90,000,000, which was greatly in advance of all previous years. In order to handle the large output of next year, the Boom Company intend to spend about \$10,000 upon increased facilities and boom capacity. A new feature in the lumbering operations this winter will be the hauling of logs over the Intercolonial Railway. Contracts have been made with the railway to haul logs for Wm. Richards & Company, Dalhousie Lumber Company and Beringer & Chapin, in all about four or five million feet. This will mean that the railway will be kept open all winter, which will be a great advantage to the lumbermen in the carrying of supplies to their camps.

The Limit Holders' Association of New Brunswick, and the St. John River Log Driving Corporation recently held a joint session in the Board of Trade rooms at St. John, N.B., and decided to present a memorial to the Provincial Government protesting against the regulation recently passed in regard to the cutting of lumber on Crown lands, to the effect that all logs shall be cut up to 5-inch in width at the top end.

Lumbermen are opposing this on the ground that timber of this class is worthless. They claim that it cannot be used as pulpwood and cannot be manufactured into merchantable lumber. They say further that it would not be worth the stumpage collected upon it. If the Government insist upon this regulation they state that they will ask to have the timber scaled, and will pay the stumpage but leave the tree standing.

At the meeting, Mr. Harry Hilyard, vice-president of the Limit Holders' Association, presided, and among others present were: W. B. Snowball, Hon. Allan Ritchie, of Newcastle; James Robinson, of Millerton; Frank Napier and William Anderson, of the Shives Lumber Company, Campbellton.

New Brunswick to Prohibit Pulpwood Export.

In the course of a speech at the opening of the Sackville Exhibition on October 6th, Premier Hazen, of New Brunswick, foreshadowed some important legislation at the next session of the New Brunswick Legislature. He intimated that an export duty will be placed on pulpwood cut on Crown lands, and expressed the hope that the Dominion Government "would so far co-operate with the provincial that our forest wealth now being ruthlessly destroyed by United States paper makers might be preserved for the benefit of our own people."

Premier Hazen said in part: "We have gone on with the idea that the forests of the province are inexhaustible, that the annual growth is equal, at least, to the yearly cut." He was sorry to have to state that this was not the case, and that it had been ascertained for a certainty that every year in New Brunswick they were cutting down more timber than was being replaced by natural growth. "If this is continued," he said, "it is only a question of a few years before our forests will be gone. We must take steps to preserve our forests. The principal source of the destruction of forests is the export of pulpwood. The time has arrived when the province should adopt a policy that will have the effect of causing the raw material of our forests to be manufactured by our own people and in our own province. It is now time to put a stop to the export of pulpwood from the Crown lands at least. I believe the Government of New Brunswick would be acting in sympathy with public sentiment if it placed a restrictive export duty on all pulpwood and raw material cut on Crown lands."

The New Brunswick Government before concluding its session discussed the pulpwood question and decided to appoint a committee to go thoroughly into the matter. The committee will be composed of Surveyor-General Grimmer, Chief Commissioner of Public Works Morrissey, and Provincial Secretary Flemming. Within the next two months this committee will visit the various sections of the province in which the pulpwood industry flourishes and will make investigations on the spot and report.

A Bathurst, N.B., dispatch reports that the sale of the Adams Burns property to the Nepisiguit Lumber Company has at last been completed. The Nepisiguit Lumber Company is an American concern, of which R. W. Ellis, president of the Union Trust Company, of Springfield, Mass., is president; Fred S. Morse, of the Morse Lumber Company, Springfield, managing director, and Messrs. Sisson and the A.

Sherman Lumber Company, of New York, are largely interested, as well as some New York and Philadelphia men, who also own timber limits in Quebec.

The Adams Burns Company's property is said to be one of the largest and most valuable lumber properties in the province. It consists of several thousand acres of freehold property, about 500 square miles of licensed lands, stores and offices in Bathurst, mill, wharves, tugs, lighters and booms at mouth of the Big Nepisiguit river, together with the stock of the Bathurst Boom Company, and an electric light plant. The purchase price has not been made public, but it is rumored that it is several hundred thousand dollars.

The new company was organized two years ago, and had already bought the Stacy mill and limits at Bathurst. It is announced that a new mill at once be erected, and that thirty million feet of logs will be cut this winter to be manufactured for the American market. The A. Sherman Lumber Company, which is interested in this deal, has large pulp and paper interests in New York, Pennsylvania and Tennessee.

Legal Decisions of Interest to Lumbermen.

The case of the Wapsehogan Lumber Company, N.B., v. C. W. Wentworth has been settled in the Equity Court recently and withdrawn from the records. The defendant agreed to discharge the mortgage and accept a small amount in settlement of damages.

Principal and Agent—The case of Marsh v. Lloyd recently came up in a Division Court of Ontario. Chief Justice Meredith in his judgment held that where an agent purchased timber as agent and afterward set up that he had purchased it as principal, the agency having been proved to have at first existed it was incumbent upon the agent to show that the agency had been determined. This is a reversal of a judgment formerly given by Judge Anglin in a Non-jury Court at Toronto.

Negligence Causing Fire—Plaintiff, by agreement with defendants, had the right to store cordwood on defendants' property adjoining their tracks. A large quantity was destroyed by fire caused by sparks emitted from the defective engine, lighting in some dry grass and being communicated therefrom to the cordwood. Defendants held liable for \$300 damages. —Scott v. Pere Marquette R.W. Company.

Payment for River Improvements—In an action by three companies for work done for and services rendered and materials supplied to defendant in connection with the floating certain ties down streams and towing them on the lake, the evidence showed that defendant had used the river improvements of the plaintiffs for the two previous years without objecting to the company's right to compensation for the use of them, and he had made arrangements for the use of them for the year 1908. Held, that the defendant was liable.—Pigeon River v. Mooring.

Contract for Delivery of Goods—A case of considerable interest to lumber manufacturers and dealers has recently been tried before a Nova Scotia Court of Appeal in the suit of Jones et. al. v. Cushing. Robert Jones & Company, of Liverpool, brought action against Andre Cushing & Company, of St. John, N.B., for damages resulting from the refusal of the defendants to deliver a quantity of box shooks, which had been contracted for. On May 30, 1902, the plaintiffs entered into a written contract with the defendant to take 20,000 box shooks as a sample lot, with the intention of taking larger quantities later, if they were found to obtain a ready market. With a view to this the following clause was inserted in the contract: "Buyers to have the option to extend the contract for twelve monthly shipments of 20/30,000 boxes after receipt of this sample shipment."

The shipment sold readily and was paid for, and on November 8th the plaintiffs wrote for further monthly shipments to be commenced on December 1. The defendants, however, wrote in reply saying that they considered the option to increase the order had been forfeited owing to an unreasonable amount of time allowed to pass before notifying them of acceptance. Accordingly they declined to fill the order. When the case came to trial first, Judge Landry, without a jury, decided in favor of the defendants, holding that the plaintiffs had delayed an unreasonable time before availing themselves of the option. He gave judgment for the defendants for \$238.32, the amount of a counterclaim.

The appeal has now resulted in this verdict being set aside. Chief Justice Barker in delivering the judgment of the court, stated that this was not a case of a mere offer to deliver goods which might be withdrawn at any time before acceptance. The defendant entered into this contract on the 30th May, 1902, and there was valuable consideration for it. It might be that the defendant might in consequence of the delay have acquired a right in some way to limit his liability on the contract in point of time. But as nothing of that kind had been done it was unnecessary to consider the question. The verdict was therefore set aside, and as no damages had been given at the first trial a new trial was granted.

How many shingles can be cut from 1,000 feet of logs? A prominent operator recently reported cutting 1,000. A reader of the "Canada Lumberman" says he can get 3,000. Which is nearest right?

In Support of Perpetual Licenses

Dr. Judson F. Clark Presents his Views Before B. C. Timber and Forestry Commission

The duration of timber licenses and the amendment of the system of timber royalties were discussed by Dr. Judson F. Clark, former Provincial Forester, in an address which he delivered recently before the British Columbia Timber and Forestry Commission, during one of its sessions at Vancouver. On the subject of establishing a provincial forest service, Dr. Clark spoke in part as follows:

"As regards a provincial forest policy, permit me to suggest the desirability of having at Victoria a thoroughly efficient forest service.

"Protection of the forests from fire is not only the corner-stone of all forest policy, but is the whole foundation of practical forestry. Forest fire patrol—for the prevention rather than the extinguishing of fires—is the forester's insurance. The present patrolling system should be greatly extended. All fire rangers wearing badges should have the power to arrest without warrant, and head rangers in all out-of-the-way places should have the powers of a justice of the peace for the enforcement of penalties under the Fire Act. The cost of the fire service might very properly be divided between the license holders and the province.

"I suggest that the Provincial Government makes a modest appropriation for the purpose of determining the practicability and cost of burning the brush under local conditions. Certainly no intelligent legislation can be formulated along this line until we have definite knowledge gained by experiment both as regards its practicability and cost.

"The limited tenure feature of timber licenses is, in view of the large amount of timber so held, a direct and most powerful incentive to wasteful logging and also utterly prohibitive of any forestry practices on the part of loggers. Twenty-one years is much too short a time for a logger who is looking to the future to plan for future crops of trees, and hence prohibits forestry measures so far as he is concerned. So far as the logger who cares nothing for the future of the forest is concerned, he could have no objections to a limited tenure provided there was a harmonious relation between the timber to be cut, the markets available and the time allowed in which to cut it. When the tenure was fixed at 21 years there were but a few hundred sections under license, and future developments in this line were not and could not have been foreseen.

"A failure to bring the time limit on licensed timber into harmony with the amount of timber so licensed would inevitably result in the embarrassment of all logging and lumber manufacturing enterprises by forcing a chronic state of overproduction; but more serious and more permanent would be the loss sustained by the province as a whole by the irreparable damage it would bring to the forests themselves and to the provincial forest revenues.

"Let the license holder be given the option for a period of say ten years of renewing his license as per the present law, or of converting it into a license renewable from year to year without time-limit, as now obtains on Dominion lands, with the provision that the logging, whenever undertaken, be conducted in conformity with plans approved by the provincial forest department. Special and reasonable provision must, of course, be made for the clearing of timber from lands suitable for and actually needed for agricultural settlement.

"Foresters are everywhere agreed that next to the fire the greatest enemy of forest conservation is high annual taxation. High taxation places a premium on hasty and uneconomical logging with a view to the abandonment of the land after it has been stripped of whatever has any market value at the time.

"The British Columbia case is complicated by the fact that the high license fee is essentially a method of paying for the timber on the instalment plan, and can not now be changed without unfairly discriminating in favor of the licensee, desirable as such a course might be from the standpoint of forest conservation. It is a matter in regard to which we, as a province, have started on the wrong tack, and we will have to pay the price.

"Provision should, however, be made for the reduction of the annual license fee to a nominal rate on all cut-over lands, whether under lease or license, which are logged according to plans approved by the forest department, in order that operators may find it good business to log carefully and otherwise care for their cut over lands with a view to returning later to cut a second and succeeding crop of logs.

"How impossible it would be for lumbermen to hold cut-over lands for second crops of logs with any hope of profit under the present taxation will be appreciated when it is recalled that an annual tax of \$140 per year for 30 years amounts (at 8 per cent. compound interest) to \$16,660 in 30 years, \$40,180 in 40 years, \$86,600 in 50 years, \$191,940 in 60 years, and it takes fully 50 years to grow a lumber tree even in British Columbia!

"The royalty is capable of being adapted as an ideal method of forest taxation. The royalty as at present collected has two defects, viz.: (1) It bears relatively more heavily during seasons of low prices than when prices are higher, and (2) assesses as high a rate on the comparatively or finish. A royalty assessed as a per cent. of the f.o.b. value of the

mill product is not subject to either objection. For example, if the worthless top log as on the log which gives a large proportion of flooring royalty rate by 3 per cent., the royalty payable on all low grade material averaging \$10 per M. at the mill will be but 30c. per M., while the royalty on flooring and finish will average between \$1 and \$1.50 per M. This would tend to encourage the utilization of low grade logs. Thus, too, a falling of prices will bring with it automatically a slight lessening of the cost of production, while an improvement in prices will bring automatically an increased revenue.

"As the values of forest products increase in price from time to time it is right that the provincial treasury should reap the increased revenues. A percental royalty on the value of the product gives this earned increase automatically in large measures, though the province should ever reserve the right to increase the percental rate should increased stumpage values call for such a course."

In reply to questions by the commissioners Dr. Clark stated that in his view the tenure of the 21 years licenses should be made indefinite on non-agricultural lands. Upon others a license holder might be given ten years within which to decide whether he would continue his license under new regulations or not. He estimated second growth on ordinary stocked land at 500 board feet per acre yearly. The present forests were not increasing. They had been here for 10,000 years, and as much was rotting as was growing. He repeated that while ownership should be in the hands of individuals, control over the lands should be entirely with the government. Limits should be subject to inspection by government scalers, who should mark trees as merchantable and compel the holder to take them out.

Trade Enquiries.

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1289. White oak—An inquiry has been received from a firm of woodworkers in Sheffield for supplies of Canadian white oak.

1301. Agency abroad—A Venetian firm would be pleased to receive quotations, c.i.f. either Genoa or Trieste, from Canadian shippers of lumber wishing to develop trade in Italian markets.

1304. Agency broad—A London firm claiming a good connection among buyers of maple flooring, would like to hear from responsible Canadian manufacturers prepared to appoint an agent.

1316. Pine sidings—A Manchester firm asks for dimensions and prices of pine sidings from Canadian exporters of same.

1321. Box boards—A Manchester firm asks for dimensions and prices of box boards from Canadian manufacturers.

1326. Pulp wood—A Manchester firm asks for prices of pulpwood from Canadian exporters.

1331. Lumber and timber—A Shanghai, China, firm of importers desires to get in touch with shippers of lumber by the car load. Quotations to be c.i.f. Durban.

1340. Lumber—A South African firm of cabinet makers, upholsters, etc., wishes to get in touch with shippers of lumber by the car load. Quotations to be c.i.f. Durban.

1363. Wood pulp—A London company seeks supplies of wood pulp for the Spanish market and would be glad to hear from Canadian exporters of the material.

1374. Lumber—A hardware dealer in Nevis wishes to hear from Canadian lumber merchants and exporters of hardware.

1376. Hardware and lumber—A firm of hardware dealers in Nevis wishes to hear from Canadian lumber merchants and manufacturers of shooks and staves, shingles and general hardware.

1377. Timber, flooring, doors, window sashes—A South African firm of general merchants is desirous of being placed in touch with exporters of timber, flooring, doors, window sashes, etc. Quotations to be c.i.f. Durban.

1381. Lumber and wood products—A firm of wholesale dealers in wooden goods in London, Eng., with excellent connections, is anxious to establish Canadian connections for supplies.

1384. Pine doors, hardwood dowels, wheels and wheel timber, ash, hickory, elm and oak logs—One of the largest wholesale timber merchants in Liverpool, Eng., is in a position to place orders for the above products from time to time, and would welcome correspondence from Canadian firms.

1386. Lumber for furniture, varnishes, etc.—A firm of importers in Venice, Italy, are in a position to contract for supplies of the above commodities from time to time with Canadian firms.

1388. Timber area—A London firm is instructed to purchase two or three square miles of land largely timbered with wood suitable for pulping, which must be in close proximity to seaboard. Full particulars are desired from parties having suitable land for sale.

Mr. Alfred Temple Dobell, son of the senior member of Alfred Dobell & Company, timber merchants, Liverpool, Eng., has been admitted into partnership with the firm.

CAMP DEPARTMENT

Fire Hazard and Its Prevention.

At the recent Pacific Coast Logging Congress at Seattle, an interesting paper was read by D. P. Simons, jr., of the Washington Forest Fire Association, Seattle. His remarks were as follows:

The experience of the Washington Forest Fire Association in handling and preventing forest fires shows that fully 90 per cent. of these fires originate in the slashings left by the loggers. These slashings are the greatest menace to the green standing timber of the Pacific coast and as the lumber industry grows there will be a corresponding increase of fire hazard.

The slashings of themselves are a menace from the fact that there is such a large quantity of debris consisting of inflammable tops and defective logs left on the ground, and they would have to be watched were logging done with ox-team and horses, for a lighted match, cigar or cigarette stub thrown carelessly aside, a camp fire or ashes from a pipe left to smolder, might start a conflagration that would soon become uncontrollable. But logging on the Pacific coast to-day is not done with the bull team. Modern methods have been introduced, and instead we see the logging locomotive and the donkey engine doing more work, much easier and with greater speed. But the logging locomotive and donkey engine bring with them an increased fire hazard, for they throw out sparks and set fires and we know of many instances where a logger has spent enough in one season in time and labor fighting these fires to more than offset the profits for that season, and in some cases entirely destroying his outfit and timber, his only asset.

This fire hazard may be divided into two classes: Logging railways and the donkey engines in the woods. It must be borne in mind that local conditions will have to be taken into consideration when it is sought to apply a remedy—what will be effective in one place may not be feasible in another.

Remedies.

The hazard of the logging railway, although the simplest to remedy heretofore, has been the last to receive attention. The remedies proposed are: The use of fuel oil, modern spark arresters kept in good condition, tank cars for water, a clean right of way and watchmen. I can not recommend too strongly the use of fuel oil on logging railways, for this solves the problem, and we find that many of the logging roads have adopted this and that many more are having the necessary changes made in their equipment.

Where it is impractical to use oil for fuel owing to the location, modern spark arresters kept in good condition are essential; of these many have been invented and are in use which give satisfaction for both wood and coal burning locomotives.

In a great many places where water is scarce the water for the donkey engines is hauled into the woods in tank cars; these could be easily rigged up with hose and pump and using the steam from the locomotive a very effective fight could be made on a fire either along the right-of-way or for some distance each side.

Where the logging railway is of a permanent nature there is no question but that a clean right-of-way is most essential, and while the cost of clearing up such a right-of-way would seem prohibitive, experience has shown that often many times the amount has been spent in fighting fires along the road besides the other not infrequent property losses.

The loggers in western Washington are beginning to see more and more the necessity for preventive measures and are employing track walkers and watchmen whose duty it is to patrol the track after each train and put out any fires that may be set by the locomotive, in this way preventing large and dangerous fires.

The remedies proposed for the donkey engines are fuel oil, if a practical burner can be found, modern spark arrester kept in good condition, water pumps, a clean space around the donkey setting, and watchmen.

If my information is correct, up to the present no suitable burner has been found by which oil can be used as fuel in the donkey engines, although the nature of the work and the location may make it impractical.

A great many spark arresters have been put on the market which have been found to be practical for use on donkey engines and there can be no good excuse offered for not using them, for they are practical at all times and places. It is claimed by a few that a donkey will not steam properly with a spark arrester, that the draft is interfered with. This may be true with the old style screen. However, we have a letter from one of the most successful loggers in the State of Washington in which he states that he is operating several donkey engines equipped with the old style screen and as an extra precaution this has been reinforced with a larger hood of wire netting and when an engineer claims he can not keep up steam another man is put in his place.

Where water is abundant it has been found practical to install a pump at the road donkeys, and this with a short hose makes a very good

fire equipment. It is very important that the debris around the donkey setting be cleaned up. This is a very easy way to insure against the setting of fires by the donkey engines and should be done in all cases.

Importance of the Watchman.

One very important feature of fire prevention in the woods is the watchmen. It is the custom in most camps to have a man go to the donkey engines after the evening meal to extinguish any smoldering fires that may have been set during the day, or just before the men have left the woods; while this is an excellent plan, I believe it should be carried a step further and a night watchman put on, for we have had some very bad fires that have smoldered along far into the night and did not start to burn until early morning. By the time anyone was up the fire had gained such headway that the whole crew had to be summoned and often outside help secured in order to handle it. If a night watchman had been employed these fires would have received attention when they first started to burn. Some loggers profiting by the experience of others now employ night watchmen who make their rounds and visit each donkey at regular intervals.

An Approved Donkey Engine.

I have just received a letter from a man who is interested in fire prevention in which he tells of visiting a logging camp recently where they are using a donkey engine that does not throw sparks. He says: "It is a compound 10 x 12 engine with a 60-inch boiler having 287 2-inch flues. Although they have a screen on it, it steams perfectly with no sparks coming out. They seem to be yarding about 35,000 and claim to be burning only about two ricks of 16-inch mill wood a day. The exhaust is outside the stack and the roof is clear of cinders, showing that few, if any, sparks come out. The large boiler and many flues give much more heating surface, thus generating steam with a slow fire." This machine would cost \$3,200, and they claim it is only \$250 more than they would have to pay for the old type of machine. It does not take long for a logger to lose \$250 if he gets fire out in his works in a dry time. This ought to appeal to the logger.

It would seem that something should be done to reduce the great accumulation of slash. Some loggers have been very successful in keeping fire out of their works, but have now reached the point where they are afraid of their own work because, owing to the development of the country and the increased amount of logging, fire is liable to spread to their works from other points where burning is being done by loggers or settlers. No rule can be laid down for all to follow. In the extreme western part of the State it is so damp almost the entire year that it would seem impossible to set a fire, yet we know of fires doing a great deal of damage even here. Some have suggested the piling and burning of the brush, in this way keeping up with the cutting, while others say the best way is to cut down all snags and work the tops and debris into windrows, using a donkey engine for the purpose, before taking the outfit out of the works, and in this way leaving it in shape to handle when it is fired. In any event some united action will have to be taken for the loggers toward this end, and it seems to me this would be better than to wait until the matter is sought to be regulated by the passage of laws that would work a hardship through their rigid enforcement backed by popular sentiment, for it must be remembered that forest fires sometimes destroy human lives and other property besides the timber.

I do not advocate the continual burning over of logged-off land, but the necessity for removing the greater part of the small stuff and debris is apparent, for this is what makes a hot fire and is so easily carried by the wind, setting new fires as it goes, and with this removed fire protection is practical, and with adequate fire protection reforestation of much cut-over land is assured.

Don'ts for Campers.

1. Don't, when in the woods, throw down a lighted match, cigar stub or other flaming object; make sure that the flame has been thoroughly extinguished before throwing it away.
 2. Don't build your campfire larger than is necessary.
 3. Don't under any circumstances leave your fire unguarded, even for a comparatively short time; see that it is dead out before you go away.
 4. Don't build your fire in leaves, rotten wood or other inflammable material.
 5. Don't build your fire against a large or hollow log, where it is hard to be sure when it has been entirely put out.
- To these "don'ts" it may be added that in windy weather or in a dangerous place, it is well to confine the fire in a hole dug clean down to the mineral soil. A fire may smoulder in the humus, or "duff," for days, only waiting for a strong breeze to fan it into a flame that may burn over miles of timber.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED—LUMBER, ETC.

WANTED—4-4 CLEAR BOAT CEDAR FOR boat building; in large or small quantities. H. E. GIDLEY & Co., Penetanguishene, Ont. 20

Wanted

FIVE CARS ELM COFFIN STOCK. APPLY Box 825 CANADA LUMBERMAN, Toronto. 20

Wanted

WILL PAY GOOD CASH PRICE FOR 1" Coffin Elm, 1 1/2" 2" and 3" Mill Run Elm. Box 830, CANADA LUMBERMAN, Toronto. 25

WANTED—TEN THOUSAND CORDS Hard and Soft Wood; also same quantity of Slabs. SIMCOE WOOD AND LUMBER COMPANY, 24 Adelaide Street West, Toronto. 21

Wanted

DRY HEMLOCK, PINE AND SPRUCE. Will also contract for stocks cut or to be cut. Box 846, CANADA LUMBERMAN, Toronto. 21

Spruce Wanted

WE ARE IN THE MARKET FOR CULL Spruce and narrow 4/4 Spruce. Please quote us F. O. B. Canisteo, N. Y., U. S. A. We can use about three carloads per week. Canisteo Wooden Ware Co. 21

Lath

WANTED—TWO TO TEN CARS EACH, spruce or pine lath. Must be well manufactured and strictly nice grade. Address Box 845, CANADA LUMBERMAN, Toronto. 20

Wanted

WE NEED THE FOLLOWING AT ONCE. Will pay cash for Pine, Spruce and Hemlock. Send us a list of any specials. Correspondence with mills solicited. 25,000 Cedar posts for sale, 4 1/2 and up. DOUGHERTY & JONES, 28 Toronto Street, Toronto. 20

Lumber Wanted

SOFT ELM, ASH, BASSWOOD, OAK, Beech, Soft Maple, Cherry, Chestnut, Hard Maple, and Birch, 1" to 3". Can use log run, dead culls out. State what you have of each kind, when sawn and lowest price. Box 793 CANADA LUMBERMAN, Toronto. 21

Soft Elm Wanted

WE REQUIRE ONE MILLION FEET OF Soft Elm sawn to our sizes for delivery as soon as shipping dry; will pay good price for choice stock. Parties in a position to supply some of this, please apply for further particulars to Box 849 Canada Lumberman, Toronto.

Wanted: White Pine Tank Lumber
3x6 and 8-18, and 3x10-24

Ontario Wind Engine & Pump Co.
Limited
TORONTO, ONTARIO 21

FOR SALE—LUMBER, ETC.

SPRUCE, 9 cars 2x4, dry, well cut, good stuff. Basket Bottoms, 5 cars 5x8x13 1/2 Burks Falls rate, special price to quick buyers. Address GAGE-HARRISON LUMBER & SHOOK CO., Burlington, Ont. 20

FOR SALE

2500 CEDAR AND TAMARACK POLES suitable for Piles and Telegraph Poles, 25 to 50 ft. long, and 6 inches and up at top end. THE MUSKOGA WOOD MFG. CO., Huntsville, Ont. 21

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

For Sale

10 cars N. B. Extra Shingles
10 cars Clears "
140 M ft. 1" M. C. Red Pine
40 M ft. 5/8" Basswood C. & B.
40 M ft. 5/8" Elm C. & B.
30 M ft. 5/8" B. Ash C. & B.

GEO. C. GOODFELLOW,
528 Board of Trade, Montreal

For Sale Hemlock Timber

at Parry Sound, Ont

About 150,000 feet B. M. 10 x 12 and 140,000 feet B. M. 12 x 12 all 22 feet and up for immediate shipment either by water or rail.

For prices and other information apply to,
MASON GORDON & CO.,
80 St. Francis Xavier St.,
Montreal, Que. 21

FOR SALE—MACHINERY, ETC.

Mill Frame For Sale

MILL FRAME FOR SALE, IN GOOD CON- dition, 110 x 40 ft. heavy timbers 8 x 8, 10 x 10 and 12 x 16, suitable for saw mill, planing mill or large factory. Apply to 512 Dickson St. Peterborough Ont. 22

Machinery for Sale

Stationary Boilers: one each, 100, 80, 70, 60 & 40 h.p.
Locomotive Boilers: 20, 25, 30, 40 and 50 h.p.
Sawmill Engines: 25, 30, 35, 40, 50, 60 and 70 h.p.
Portable Engines on Wheels or Skids: 20, 25, 30, 40 and 50 h.p.

Sawmills capacity from 2 to 30,000 feet per day.
THE ROBT. BELL ENGINE & THRESHER CO
LIMITED, Seaforth, Ont. 21

Machinery for Sale

One MacGregor Gourley Co., 15" Q. Y. Matcher.
One MacGregor Gourley End Matcher.
One Cowan & Co. 13" Four Side Moulder.
One Cowan & Co. Heavy Door Clamp.
One 24" Revolving Bed Surfacar.
One combination rip and cross-cut Saw with iron frame.

These machines are all practically new and are being disposed of as the owners are going out of that line of business. Any of these machines can be seen running in our factory. Address in first instance to Box 848, CANADA LUMBERMAN, Toronto. 23

For Sale

ONE PORTABLE CIRCULAR SAW MILL for sale; one boiler and furnace (50 h. p.); one engine (40 h. p.) with cylinder 14 x 24 with a heavy square frame fly wheel eight feet in diameter with sixteen inch face for drive belt; fourteen inch drive belt just new, all other belts good; two circular saws, one sixty inch, one forty-eight inch, good frame; one slab saw; one edger; one three-block carriage friction feed; 56 feet smoke stack, 22 inches in diameter with screen on top; tools and pumping outfit.

This mill is easy to move and everything is in first class shape and ready to go to work. This mill will be sold cheap. Reason for selling: no more timber to cut here.

A. McBETH,
Kippen, Ontario. 21

WANTED—EMPLOYMENT

Position Wanted

LUMBER BUYER OR SALESMAN OF 17 years is open for position with good firm. Could arrange on short notice. Have selling connection in Western and Eastern Ontario, also New York State. Knows Ottawa Valley and Georgian Bay grades, either in the rough or dressed. Apply to Box 847, CANADA LUMBERMAN, Toronto, 20

Position Wanted

COMPETENT LUMBER INSPECTOR OF wide experience wants opening as yard foreman or inspector. Might arrange to buy on commission for responsible firm. Seeks change so as to reduce travelling and be more at home. Box 832, CANADA LUMBERMAN, Toronto. 21

WANTED—POSITION IN OFFICE OR AS shipper with British Columbia lumber or logging firm. I have had three and a half years experience in Canadian Chartered Bank and I am now office manager and shipper of large furniture manufacturing company. Will supply recommendation letters if requested. Apply to Box 839 CANADA LUMBERMAN, Toronto. 22

Situation Wanted

BY LUMBER ACCOUNTANT OF THIRTEEN years experience in wholesale and manufacturing offices. Past eight years in charge of office; now employed in that capacity by large pine mill and chartered railroad. Would like to make nominal investment as an item of permanency. Box 824, CANADA LUMBERMAN, Toronto. 20

WANTED—EMPLOYEES

Wanted

AN EXPERIENCED BAND SAWYER FOR Ontario lumber mills, a good position for the right man. Write stating particulars to Box 833, CANADA LUMBERMAN, Toronto 20

COMPETENT SALESMAN WHO KNOWS Western Ontario trade to sell millstock—lumber, shingles, etc. State salary. Good references required. Apply Box 569, Lindsay Ont. 20

BUSINESS OPPORTUNITIES

For Sale

SAWMILL, CAPACITY 20,000, AND 1,300 acres of timber in Parry Sound district. Situated on lake with navigable water to R.R. Scow, camp, etc., in connection. Apply Box 840, CANADA LUMBERMAN, Toronto. 22

FOR SALE—SMALL HARDWOOD MILL Well equipped. On Georgian Bay. Lumber sold for several years. A Bargain. For further particulars apply Box 844, CANADA LUMBERMAN, Toronto. 22

MISCELLANEOUS

Valuable Timber Limits and Saw Mill For Sale

1. The timber lands formerly belonging to William McVicar in the County of Bruce consisting of upwards of eight thousand acres in the Township of St. Edmunds and Lindsay.
2. Timber Limit in the district of Algoma composed of Berth 11 containing 28 square miles.
3. Valuable Saw Mill in the Town of Port Elgin with harbor and railway connections. For particulars and conditions of sale.
Apply to LEES, HOBSON & STEPHENS, vendors solicitors, Bank of Hamilton Chambers, Hamilton, Ont. 20

Harbour Commissioners of Montreal

Tenders for Timber and Portland Cement

SEALED TENDERS ADDRESSED TO THE undersigned and endorsed "TENDER" will be received up to noon on WEDNESDAY, 27TH OCTOBER, 1909, for the above materials.

Specifications may be obtained on application to Mr. F. W. Cowie, Chief Engineer, at this office. The Harbour Commissioners reserve the right to reject any or all of the tenders received.

DAVID SEATH,
Secretary-Treasurer
57 Common Street,
Montreal, October 9th, 1909. 20 24

Hay for Sale

FOR HAY (TIMOTHY AND CLOVER mixed) apply to E. Simard & Co., 103 St. Francois Xavier street, Montreal. 29

Small Timber Limit for Sale

FORTY-TWO ACRES VIRGIN FOREST; fifty miles from Toronto; 1 1/2 miles from railroad station; comprising maple, elm, beech, hemlock, basswood, cedar. Apply Box 834, CANADA LUMBERMAN, Toronto. 21

Limit For Sale

30,000,000 FEET SPRUCE AND JACK Pine, good quality, 130 miles west of Edmonton on Macleod River and G. T. P. Splendid proposition—move quick, snap—wire or write 359 Cumberland Ave., Winnipeg. 20

Timber for Sale

98 ACRES LARGE VIRGIN TIMBER Hemlock and Hardwoods, on C. P. R. near smart mill, land level. Particulars by addressing Box 838, CANADA LUMBERMAN, Toronto. 19-20-23-24

For Sale

Large Tract of Timber

THE PROPERTY OF
The Canadian Land and Immigration
Company of Haliburton, (Limited)

There are large quantities of Railroad and other Timber, including Cedar, Hemlock, Spruce, Balsam, Basswood, Beech, Cherry-Birch, Maple, also considerable Pine, Elm and Ash on this tract. It is well served by two railroads. The company are prepared to sell this timber in blocks ranging from 2,000 to 10,000 acres, or more if desired.

There are several good mill sites to the property. This would be a good opportunity for parties who are at present cut out and are looking for a new location.

Maps and plans and further particulars can be had by applying to

W. H. LOCKHART GORDON,
Managing Director,
79 Adelaide Street East, Toronto

Timber Lands and Saw Mills for Sale

The UNDERSIGNED Offers:—

Parcel 1. Ste Anne des Monts property situated on the South Shore of the St. Lawrence River, Gaspé County, Quebec, about 1000 acres of Seignior or Fee Simple lands—at the mouth of the Ste Anne des Monts upon which is located a well equipped lumber and shingle Mill with ample steam power, electric lighting, with a capacity of 25,000 feet of Lumber and 125,000 to 150,000 pieces of Shingles each ten hours—also Dwellings for workmen, Stable, Store houses, Repair Shops and Mill Pond and storage facilities for logs.

About 300 square miles of licensed timber lands upon which disinterested Explorers make a minimum estimate of over 350 Million feet of saw logs, principally spruce, fir and cedar, and 595,000 cords of Spoolwood, and Pulpwood.

All on drivable streams an average of not over 30 miles to Mill Pond.

And all shanty plant tools and equipment on the property.

Parcel 2. What logs are now in the river estimated 3 Million feet board measure.

Parcel 3. Grande Vallée property situated about sixty miles east of Ste Anne des Monts on the South Shore of the St. Lawrence River in the County of Gaspé, Quebec.

About 54 square miles of Seignior or Fee Simple lands and 100 square miles of Licensed lands.

A new Mill consisting of a steam feed Circular saws—1 Mershon Horizontal resaw—with all subsidiary Machinery and ample steam power and electric lighting.

Capacity 50,000 to 75,000 feet of Lumber each ten hours—A practically new Mill for sawing shingles and railway ties.

With ample steam power and electric lighting to produce 125,000 to 150,000 shingles each ten hours.

All the shanty plants, tools and equipment on the property.

On the timber lands, disinterested Explorers minimum reports are 100 Million feet saw logs, principally spruce, fir and cedar and two hundred and forty five thousand cords Pulp and Spool Wood.

For further particulars, address,
C. A. MILLINER,
Deseronto, Ont.

Timber Limit for Sale by Tender

SEALED TENDERS ADDRESSED TO THE undersigned and marked on the envelope "Tenders for Point Grondine Indian Reserve" will be received until noon on WEDNESDAY, THE TENTH DAY OF NOVEMBER NEXT, for all the cherry birch, maple, spruce, hemlock and other classes of timber; estimated to contain over fifty million feet of hardwood and over fifty million feet of soft wood together with all the improvements on the limits; covered by Ontario Timber Licenses, numbers 5 and 8 and Dominion License number 6a. Area about 88 square miles. This tract is situated on the Georgian Bay at Beaverton River and is particularly suited for a charcoal, stovewood alcohol, hardwood flooring or veneer proposition.

An accepted cheque for \$500 must accompany each tender to be made payable to the undersigned and to be returned on non-acceptance of tender.

Terms, cash 50% in ten days; balance six and twelve months, good notes, interest at six per cent; or all cash buyer's option.

Highest or any tender not necessarily accepted.

MCCARTHY, OSLER, HOSKINS &
HARCOURT, Toronto

Solicitors for the Vendors.

Government Forests of Java.

In the island of Java there are 1,665,000 acres of Government forest — principally teak-wood. They are primeval forests, more or less damaged by dishonest fellings. Three hundred and sixty thousand acres of them consist already of plantations. Nearly all these forests are worked on working plans. In the greater part — 1,545,000 acres — the management is not so thorough, as forests are felled there by contractors. In the remaining part — 120,000 acres — management is effective, the timber being cut by the Forest Service. The area under effective management increases yearly, and consequently the felling by contractors will decrease in future. In 1907 the teak forests yielded 175,000 tons of timber, of which 129,000 tons were cut by contractors, 39,000 tons by the Forest Service, and about 7,000 tons by others. The yield of firewood and fuel was 27,000,000 cubic feet (stacked).

Government felling was started in 1897. In 1905 these fellings yielded 26,000 tons of teak timber, the next year 36,000 tons, and in 1907 the yield was 39,000 tons. Fellings by contractors yielded in those years 120,000, 116,000 and 129,000 tons respectively. Nearly all forests being worked on working plans, it cannot be expected that the annual output will increase by increased felling of forests.

Contractors arrange for the exploitation of forests with a yearly supply of about 1,400 tons of timber for five to eight years. They pay a certain sum per month or year, or at a rate per ton of timber yielded. The exploitation of these forests is mostly determined by open contract, a great number of such forests being in the hands of a few companies, who sell the timber after its arrival in depots, or export it. The timber supplied by the Forest Service is mostly sold in public auction, the supply of some Government depots being sold by public tender.

At the beginning of this year the Government started an experiment with a donkey engine that was ordered from Seattle. Prior to this

time all the timber had been hauled to the roads by buffaloes or by men. The transport from the forest to the nearest railway or great river is done along logging railroads or on buffalo cars. Floatable streams are scarce in Java. Most of this timber is hewn into barks that are made in the forest with the axe. However, in the last few years the production of logs has been growing into practice.

The export of teak timber in 1907 was 47,000 tons, distributed as follows: 24,500 tons to Europe, 3,600 tons to Asia, 18,000 tons (mostly sleepers) to Africa, 650 tons to Australia, and 150 tons to America. 128,000 tons were used in Java. The export has increased of late years. In 1903 it was 20,000 tons; in 1904, 22,000 tons; in 1905, 43,000 tons; in 1906, 46,000 tons, and in 1907, 47,000 tons.

Besides the teak forests, Java has wild wood forests of considerable extent. All wood that is not teak is called wild wood here. However, the good timbers have disappeared from most forests. They occur still in the mountains, but transportation is difficult there. Besides, many of the mountain forests have been reserved for climatological and hydrological reasons.

In the other islands (Sumatra, Borneo, Celebes, etc.) there is no forest management deserving the name. However, the Government is considering the exploitation by contract in the Island of Sumatra of a great forest area. Of course, it would be necessary for capital to interest itself in this enterprise. Steam logging appliances and saw mills and export on a large scale would be necessary conditions for success. There are still enormous areas covered with forest on these islands. Thus, if the experiment should be tried and prove a success, exploitation could be greatly extended there.

Sell Your Timber Limits by Public Auction at Ottawa

I have had an extensive experience in conducting successful timber limit sales. I conducted the last timber limit sale here for the Dominion Government. Ottawa is the best place in America to sell timber lands.

Review of Current Trade Conditions

Ontario

Ontario manufacturers are finding a better market across the border than they are at home. The white pine market there is brisk, sales being recorded frequently at prices which could not be obtained a month ago. Five quarter, 1, 2 and 3 cuts are moving quite freely, though prices are about steady. Six quarter, number 3 cuts and better, are selling at \$38, whereas a month or so ago \$35 was the best bid. Five quarter and six quarter, good sides, are bringing \$52, which is \$4 a thousand better than the price two months ago. Hemlock also is in better demand at Buffalo and Tonawanda and other United States points than in Ontario, and prices are higher than they are in Ontario. Lath are strong. Shingles, however, are demoralized.

Five quarter mill run, common and dressing, are reported to be in good demand, selling at \$25 at the mill, which is equal to \$31 on the other side. There is also a good demand for 1x6 and 1x12. Exporters at Buffalo and Tonawanda are picking up all they can find of these classes. Spruce is very erratic throughout Ontario, prices varying according to local conditions. A base price of \$15 is about fair for mill, according to local conditions. A base price of \$15 is about fair for mill culls out.

Wholesalers on the other side are very pessimistic and are stocking up to full capacity in expectation of a good winter and spring trade. One dealer is reported to have stated that he would need 17,000,000 to take care of his winter and spring business, whereas he formerly used on an average from 13 to 14 millions. It is feared that the scarcity of boats may hamper some of the dealers at Buffalo, Tonawanda and other Lake Erie ports. The general revival in trade has caused extensive increases in the quantity of freight being shipped by water, and a number of lumber merchants may find that they will have to get in some of their stocks by rail after navigation has closed.

The approaching close of navigation has resulted in large quantities of lumber being shipped from Ottawa to United States ports during the last fortnight. Prices generally are a trifle irregular but have a tendency to advance. Stocks of good white pine strips and shorts are small and prices quoted are extremely high. One-inch white pine strips are selling at \$38 to \$42 per thousand, and good white pine shorts are selling at \$38 for 1-inch. Ottawa shippers are convinced that no stiffening of prices is probable in the English market at present, as business seems still to be dull over there. Manufacturers, however, are not very heavily stocked with lumber for the British market.

Eastern Canada

Short lumber is an active commodity on the St. John markets. There is a feeling of restlessness about the market for spruce lath and cedar shingles, with a tendency towards advance in the price of spruce lath. An advance is a regular occurrence in the autumn, and will probably be repeated this year. The stocks of lath at St. John are normal, or rather, if anything, they are upon the light side, totalling possibly two and one-half millions. The price of spruce lath at St. John varies from \$2.95 to \$3.05, f.o.b. St. John, and it is quite firm at that. The state of affairs in connection with cedar shingles is quite different, as there appears to be a lack of confidence because of the failure of cedar shingles to improve along with other lines. Prices, however, are fairly steady. The stocks at St. John are rather heavy for October, those of "Extras" amounting to one and one-half millions, with prices at \$2.90 for dutiable "Extras" and \$2.40 for dutiable "Clears" per thousand, f.o.b. schooner St. John.

The demand for spruce at Boston has been rather dull during the

past fortnight. Prices are not falling off, but are somewhat weaker. Frames 9-inch and under are selling at \$23. Random has been in very poor demand, small sizes being quiet and the prices being a trifle lower in many cases. Spruce boards have been only in moderate demand. The demand for shingles at Boston has been quiet but prices are firm. The best cedar extras are quoted at \$3.65 to \$3.75. Manufacturers, however, will not sell at the inside price and some are holding out for \$4. The demand for lath has been fairly good and prices firm at \$3.75 to \$3.80 for 1½-inch, and \$4.10 to \$4.15 for 1⅝-inch.

Western Canada

The demand for lumber is now much better than for some time past but the coast mills are forced into competition with the mills on the eastern slope of the Rockies and in northern Alberta, which are cutting spruce and putting it on the market at prices the coast mills are unable to get down to. The greater worth of the coast fir from the point of view of the builder who wants lasting qualities in his timber, helps to counterbalance the extra price and accounts for the fact that more lumber is now on the books. Red cedar shingles are fluctuating at Chicago. The coast for the first eight months of the present year was greater by 800,000 feet than the production for the corresponding period of 1908.

There is at present a considerable quantity of logs in the water on the coast and the cut in the woods has been so large that prices have been kept down.

Great Britain

The month of September was a quiet one in the lumber business at Liverpool. Prices ruled fairly firm and importers made a little profit. The volume of trade, however, is still very poor and buyers are not increasing their stocks. The stocks of waney board and square pine are not as heavy as in former years. They are, however, quite sufficient to meet the small demand existing. The arrivals of pine deals and boards are again considerably in excess of the consumption but prices are unchanged. Stocks of New Brunswick and Nova Scotia spruce deals are moderate and the consumption is fair, so that prices have an upward tendency. The demand for oak is still quiet and prices are unchanged. The consumption of rock elm is only of a retail character at unchanged prices. There are plenty of birch logs and prices are only just maintained. The stock of birch planks is more than sufficient for the small demand at present existing, and prices are a little easier.

The trade at Manchester is quiet. Orders are plentiful but they are for small quantities. The sales of spruce have been fairly good during the past month. Bristol reports indicate that business is still rather dull, both at the yards and at the mills. During the balance of the year it is not expected that the demand will show any improvement. Glasgow is still the most encouraging market in the old country. Business continues to show signs of expansion and the demand is more active than at any time during the year. Prices are maintained and the general tendency is towards advance.

United States

Generally speaking, there is a belief that the extent of business in all classes of lumber is smaller than was expected by the trade. Prices, however, are fairly firm all around, firmer, in fact, than the present demands would seem to warrant. This is accounted for largely by the fact that an improvement in demand is expected very shortly, as lumber consuming industries are known to have allowed their needs to accumulate. White pine at Chicago has been in better demand from the manufacturing grades, although the low grades have been dull. Prompt delivery of good lumber is insisted upon by manufacturers, and full list

prices are secured on the better grades. At Minneapolis there is a tendency towards improvement, which is expected to materialize during the next month or two. Timber and plank are advancing and lath are selling at good prices. A scarcity of lath is expected before the close of the season.

Buffalo dealers report that they can sell with ease anything from No. 2 barn up, and that stocks of these grades are scarce. Low grades are somewhat improved and late reports indicate a betterment in the market for boxes. At New York the prices of white pine are steady and an advance is expected in the near future. Hemlock in Chicago is rather quiet, but quotations are steady. At Buffalo it is believed that hemlock will continue to be in good demand until the weather prevents carpenters from working out of doors. Boston buyers consider the prices for hemlock about 50 cents or \$1 too high. The best bids that can be obtained for boards are around \$19.50, but \$19 is more often offered, and manufacturers will seldom sell at this price.

Arrivals of western pine at Chicago are too scarce to fill the orders now on the books. Red cedar shingles are fluctuating at Chicago. Clears are selling at \$3.17 to \$3.27, and stars at \$2.69 to \$2.79. White cedars are steady at \$2.90 for stars and \$2.45 for standards. At Buffalo, shingles are still very slack. The cooperage situation still shows very little improvement.

Market Correspondence

Ottawa Valley News—Firm Prices Prevailing.

Ottawa, Oct. 12—Increasing quantities of lumber have been shipped to the United States and Montreal during the last fortnight, but shippers attribute the change to the approaching close of navigation. Even at rates much higher than when the water transportation opened in the spring, shipment by canal is cheaper than by rail. The prices are firm and in some lines buoyant and irregular. Manufacturers of good white pine strips and shorts are pretty well sold up, and many of them ask astonishingly high figures. The demand is scarcely supplied. The bulk of the output of the mills is going around \$38 to \$42 per thousand for one inch white pine strips and \$38 for good white pine shorts of the same thickness. The building boom in Ottawa and vicinity shows no sign of abatement and permits are issuing from the city hall at double the rate of last year. Suburbs are developing so rapidly that the call for lumber for sidewalk construction is felt and the local consumption of hemlock is increasing. The price is firm at from \$13 to \$15 per thousand.

The large dealers in ties figure on a big demand for them next spring. This is the natural outcome of a summer of retrenchment when all the repairs to tracks that could be done without were deferred. Two electric railways skirting the country from Ottawa to the St. Lawrence front are planned to start operations in the spring, and if they are carried out the tie market will be very buoyant. One of the prominent tie merchants told the "Canada Lumberman," however, that the proposed railways never affected the market so much as the conditions on operating lines, because the unbuilt railways are always so much of an uncertainty. The biggest local consumer of ties now is the Canadian Northern, whose railway will enter Ottawa this autumn. The poles erected on this railway are of the 30-foot class, which are by far the most plentiful, selling at from \$2 to \$3 a piece. If the electric railways are constructed to the St. Lawrence the poles will also be of the short variety. All poles over 40 feet in length are scarce and difficult to procure even at the high quotations, from \$5 to \$15 each, that they are running at. There is an indication, however, that soon a big market for the long poles will vanish, as the city of Ottawa is contemplating action to compel all light, power, telegraph and telephone companies to put wires underground. The long poles are indispensable in cities when they are allowed, and any move of this kind is looked upon as of the greatest importance to dealers. The whole Ottawa valley has been pretty well cut over for long poles, though there is a considerable quantity of tamarac and cedar fit for ties left in the Gatineau and Ottawa river districts.

Lumbermen show their confidence in the market for next season by the large gangs of men being sent away to the woods. The wages are firm at \$28 per month for good choppers. Shippers to the English market claim that prices cannot stiffen because it is dull over there, but the manufacturers are not overstocked with the sort of lumber that the British market calls for.

The 183 $\frac{3}{4}$ square miles of timber limits owned by the estate of Andrew McCormack, offered for sale by public auction in the Russell House, Ottawa, on September 30th, did not bring the reserve bid and were withdrawn. The highest offer was \$225,000. The area is at the head waters of the Ottawa and comprises a lot of red and white pine and spruce suitable for pulpwood. The attendance of Ottawa lumbermen was small and the bidders were all from the district of Renfrew and Pembroke. It is understood now that the timber will be sold by private deal. Mr. F. A. Gendron, M.P.P., of Hull, one of the large shareholders

in the estate, told the "Canada Lumberman" that the company was not obliged to sell. It is stated that the reserve bid is over \$200,000.

In order to demonstrate the water power available in Ottawa, the mayor has just investigated the conditions at the big manufacturing plants, the chief of which are the lumber mills of J.R. Booth and the W. C. Edwards Company. The Edwards mill, representing now an expenditure of a million dollars, surpasses in some respects anything of its kind on the continent. The lumber king has a plant that generates 3,000 horse power, and of this 2,500 horse power is for sale. There are now being installed there twenty-four 160 horse power boilers, which will be used in low water and will be fed by the refuse of the mill. J. R. Booth has three new power wheels being erected in a new power house, that will have a capacity of 3,000 horse power each. It is his intention to use as much of this as will be required instead of the old water power installations. The pulp and paper mills will not need this power as they are fed from steam produced from lumber mill sawdust. Mr. Booth will not need all this power for the present, but intimates that he may have plants enough to consume it. Mr. Booth states that the storage dams at the head waters of the Ottawa river, in conjunction with the dam erected recently at the Chaudiere, will ensure 100,000 horse power the year round.

New Brunswick News—Heavy Rains Delay Logging

St. John, N.B., Oct. 8.—The fortnight has been marked by many features of interest in the lumber trade and industry. The continual and heavy rains have seriously hampered the preliminary stages of logging operations, many portions of the country being flooded and it being an impossibility to move supplies or camping outfits. Many lumbermen in different parts of the province have suffered severe losses by the breaking of booms containing logs, the booms being too weak to resist the heavy press of water. In the St. John river the water was higher than ever before known in the fall of the year, and reached a point as high as the usual spring freshet.

A regulation of much importance to the lumbermen of New Brunswick has been adopted by the Crown Lands Department. The regulation deals with the cutting of logs on Government limits and provides that all logs must be cut to a diameter of five inches at the top end, and that the small end must be paid for at the same rate of stumpage as was the case heretofore when the regulations provided that the log need be cut up to a ten-inch top end. The New Brunswick Limit Holders' Association is very averse to the new regulation, and is taking the matter up with the Provincial Government with a view to having some change made in the conditions of the regulation.

In trade circles the most activity seems to be centred about the market for short lumber. Spruce lath and cedar shingles seem to be in a state of restlessness. In the price of spruce lath the tendency seems to be of a decidedly upward nature, and it would look as if the history of a number of the autumns of the past ten years would repeat itself so far as lath are concerned.

Local stocks of lath are normal, probably a trifle on the light side for this season of the year. The total quantity would be in the vicinity of two and one-half millions. The local value of dutiable spruce lath ranges from \$2.95 to \$3.05 f.o.b. St. John., with the probabilities pointing in the direction of higher quotations in the near future.

In cedar shingles the present conditions of trade are by no means similar to those governing the lath market. There is an element of uncertainty in regard to shingles, somewhat in the nature of a lack of confidence, caused by the fact that this line has failed to recover the ground lost during the quiet in business circles caused by the hot season. Still, no further ground has been lost, nor is it probable that any important concession in price is apt to be granted a buyer, at present writing. Local stocks of shingles are fairly heavy for October. The local holdings of "Extras" would total to two and one-half millions, of "Clears," to one and one-half millions. Buyers are being quoted on "Extras" (dutiable), \$2.90, and on dutiable "Clears," \$2.40 per thousand, f.o.b. schooner St. John.

The current freight rates by schooner are 25c. per thousand on spruce lath to Boston and 65c. per thousand on lath to New York City.

Lumber Prices Soaring in the Kootenays.

Mr. W. A. Anstie, secretary of the Mountain Lumber Manufacturers' Association, recently made a tour of the Kootenays and reports that owing to the big demand from the prairie provinces lumber prices in the Kootenays are ruling higher than at any previous time during the past two years. A late start at sawing operations was made. In January stocks on hand in the upper country exceeded two hundred million feet. Although the mills have been kept busy, stocks at present only amount to about 125,000,000 feet, a quantity that will be readily absorbed if the present demand continues. Mr. Anstie added that most of the mills would close down within a month or two. He expects conditions to be squally favorable next year, owing to the influx of settlers to the prairie country.

THE MACHINERY WORLD

What Manufacturers of Logging, Sawmill and Woodworking Equipment are Doing

Increased Use of Logging Machinery in Ontario.

A noticeable feature in the development of Canadian lumbering methods is the extent to which operators are now going in for the use of logging machinery of various kinds. This has been particularly the case during recent months in Ontario. An instance is afforded by the Hope Lumber Company, of Blind River, Ont., which is owned by E. B. Foss & Company, Bay City, Mich., who have placed an order with the Lidgerwood Manufacturing Company for one of their improved patent sleigh hoists for their Ontario operations. This hoist differs from others in operation in that section of the country, from the fact that it will hoist loaded sleighs over any ridge, and that it will lower the sleighs, loaded or empty, no matter how steep the ridge, under steam. Perfect control of the sled is secured at any time, so that the trouble which formerly practically prohibited the use of hoists under severe conditions in lowering has thus been eliminated. An additional interesting feature in connection with this hoist is that it can take the sleds directly to the banking ground and return them as desired. An illustration of this sleigh hoist is to be seen in the Lidgerwood Manufacturing Company's advertisement which appears in this issue.

The cableway skidding equipments manufactured by the Lidgerwood Manufacturing Company are also meeting with much approval. The Saginaw Lumber & Salt Company, who are large operators in the district of Algoma, have ordered two of these equipments for use on their limits. These equipments, with the timber found, will have daily capacities of 25,000 to 40,000 feet, and will bring the logs directly from the stump to the driveable waters. The timber on the Saginaw Lumber & Salt Company's limits is very fine and large, perhaps the best to be found in Ontario to-day, and they intend shortly to have all their operations conducted by steam.

A Cleverly Designed Advertising Float.

The "Old Home Week" celebration transformed Montreal for the time being into the gayest city on the continent. On the special Civic Holiday a large industrial parade was formed, which was the centre of attraction during the morning. About fifty local firms participated in the procession formed. Prizes were afterwards distributed for the best displays, and among the successful contestants was the firm of D. K. McLaren, Limited, the well known belting manufacturers. Their display was a replica of the pyramid of belting which carried off the highest award in its class at the Paris Exhibition of 1900. Several cards attached to the float called attention to different features of the goods manufactured by this firm, one in particular announcing that only English oak tanned leather, prepared by a special slow tanning process, was

A Unique Float—D. K. McLaren Limited's contribution to Montreal's Industrial Parade.

used in the manufacture of their goods. As may be noted from the accompanying photograph, the method of transporting the float and the new style advertising included are quite original, and almost form an infringement upon the Bovril picture, "Alas, my poor brother." The oxen used were first prize winners at the recent Bedford Fair, and, as may be observed, are splendid specimens. They are four years old and tip the scales at 3,500 pounds. They proved good "Steers" for the McLaren firm and elicited considerable praise from all sides.

Lumbering and Hoisting Engines of Merit.

The Clyde Iron Works, Duluth, Minn., have issued an attractive catalogue of their contractors, hoisting engines, which will prove of much interest to all engaged in industries using such engines. In addition to hoisting engines, the company also manufacture log-loading and skidding machinery, logging tools, etc., which are well known throughout Canada and the United States for their excellent working qualities and their splendid manufacture and material. The catalogue referred to is an extremely handsome volume of something over fifty pages and is profusely illustrated with excellent half tones and line cuts, which give one an intimate knowledge of the company's products. In addition to the description of the company's machinery the catalogue contains a great deal of useful information for users of hoisting machinery. The accom-

Hoisting Engine manufactured by the Clyde Iron Works.

panying illustration is of one of their hoisting engines and will give a fair idea of its construction. All who are interested in machinery of this nature will do themselves a service by writing to the company for a copy of the catalogue, at the same time mentioning the "Canada Lumberman."

New Arrangement for B. C. Pulp Leases.

The Government of British Columbia have decided to give two years more grace on the special terms already existing, for the lessees of pulp limits which are to expire in November next. There are only four pulp leases now in existence, and the holders were notified some time ago that unless they took substantial steps to comply with the conditions of the grants the leases would be cancelled. According to the new arrangement, each lessee must enter into an agreement with the chief commissioner of lands to expend not less than \$500,000 in development, to include the construction of a pulp mill or pulp and paper mill, with a total capacity of not less than 100 tons of pulp; one-half ton of paper being estimated as equivalent to one ton of pulp. These mills are to be in operation by November 20, 1911. The agreement must be accompanied by a certificate of deposit of \$50,000, to be forfeited in the event of the lessee not complying with the terms. The lessee is not to manufacture or sell any timber until the pulp mill or pulp and paper mill have been completed or put in operation, except that which may be required in the erection of the buildings for the plant. The lessee will not be allowed to cut or manufacture lumber from the wood pulp limits without taking out special licenses covering the timber to be cut and paying the regular fees and royalties therefore.

The Department of Indian Affairs, Ottawa, is calling for tenders for "Cape Croker Timber," until noon on Tuesday, Oct. 19. The timber will be taken out by the Indians on Cape Croker, Lake Huron, and delivered on the shore of the lake. It includes 500,000 feet B.M., comprising basswood, elm, beech, hemlock, and cedar. Part of the timber was injured slightly by fire during the summer on the bluffs, and part of it is green, on the flats.

A Hollow Blast Grate that is Cheaper than a Draft Grate

Such is the durability of the **Gordon Hollow Blast Grate** that, although its first cost is necessarily greater, in the end it is infinitely cheaper than any draft grate ever made.

There are many outfits in use to-day that have been in service from **fifteen to twenty years**.

But the principal advantages of installing this celebrated grate are that it **adds from 25 to 50% to the efficiency of a boiler**, and that it **gives as good results with wet, green or frozen sawdust or slabs as a draft grate gives with dry wood**.

It also renders you **absolutely independent of the weather**, and **saves labor in firing**.

Sold **on approval**, subject to **thirty days' test**, counting from date of installation. In case of rejection, **we pay the freight both ways**.

HUTHER BROS. PATENT GROOVER OR DADO HEAD

For cutting any width groove from one quarter inch to 2 inches or over

Can be used on any Circular Saw Material. Will cut a perfect groove with or across the grain. This is the only Dado Head on the market that gives entire satisfaction on all classes of work. No screw adjustment. For different width grooves, simply remove or add inside cutters. Sold by builders and dealers of wood working machinery in all parts of the United States. Will send on approval, in competition with any other make on the market; if not the best return at our expense. HUTHER BROS., SAW MFG. CO., Inc., 1170 University Ave., ROCHESTER, N.Y., manufacturers Circular Saws, Morgan Pattern Lock-Corner Box Cutters, Concave Saws, etc.

EDGINGS

Ontario.

The Huntsville Syndicate have received an order from the Grand Trunk Railway for 4,000 doors for immediate delivery.

The Sault Ste. Marie Pulp & Paper Company have manufactured 29,718 tons of ground wood pulp this year, an increase of 3470 tons over the previous year.

The Ontario Government has completed its survey of timber berths in the Thunder Bay District for the present year. 36 berths were surveyed and the surveying parties have all returned.

In the recent fire at J. Donaldson's sawmill, at Almonte, Ont., the loss amounted to \$9,322 and the insurance to \$2,500, leaving a net loss of \$6,822. The details of the loss were as follows: Machinery, \$5,872; building, \$2,500; patterns and tools, \$600; manufactured goods, \$350.

The Gibson, McCormack & Irwin Lumber Company, of West Toronto, have purchased two acres of land on the G. T. R. line in the south end of Weston, Ont., for \$4,000, where it is supposed they will have a lumber yard. The property was once part of the Chew Estate. Messrs. Goulding & Hamilton put the deal through.

The senior class in forestry at the University of Toronto will be engaged for the months of October and November in practical work in the woods for which they will receive good wages. The Canadian Pacific Railway Company engaged them to estimate the value of the timber resources in the State of Maine along the line of the railway between Montreal and St. John, N.B. Upon their return the students will complete their theoretical work. In future the students will perform their practice in the woods during the fall term.

Graham & Horne have sold their limits at Mine Centre, Ont., to the Northern Construction Co., the price reported being over \$200,000, through which it is said Graham & Horne will profit to the extent of over \$100,000. There is talk of the Northern Construction Company erecting a pulp and paper mill on the limits, as this is provided for by the terms of the timber license. It is said, however, that there is not enough pulpwood on the limits to justify the expense of erecting such a mill and that if it is built the Government will have to provide the pulpwood.

Eastern Provinces.

Marcil & Lamarre, lumber merchants, etc., St. Michel Archange, Que., have registered, the members being Louis Marcil, Hector Lamarre and Syfroi Lamarre.

A. McHart, of Halifax, N.S., has bought a considerable quantity of timber land and is erecting a box factory at Bedford, N.S. The machinery is now being placed in the mill.

The Munson Steamship Company, of Boston, has inaugurated a direct monthly steamship service between St. John, N.B., and Havana, Cuba. The first sailing was scheduled for October 1.

The Government of New Brunswick, before concluding its session, took steps to secure in Havana a warehouse which will be available for use by New Brunswick shippers to the Cuban market.

The work of rebuilding the mill of the Canada Paper Company, at Windsor Mills, Que., is progressing rapidly. In two months the mill will be running. It will be equipped with up-to-date machinery.

A five-mile timber berth on New river, Charlotte county, N.B., has been sold at auction at the Crown Land Office to L. B. Knight at the upset price. A four-mile berth on Salmon river was bid in by Alfred West at \$20.50 per mile.

Stephen Brothers, lumber manufacturers, of Windsor Junction, N.S., are rebuilding their factory, which was recently destroyed by fire, with a loss of \$8,000. The sawmill will be ready to run about October 20, and the Excelsior plant about a month later.

Herbert J. Brown, of Portland, Maine, who is interested in the Quebec & St. Maurice Industrial Company, announces that the Quebec & St. Maurice Industrial Company will erect a small pulp mill at La Tuque, Que., carrying out a plan the company had when it acquired the property a few years ago.

The Canadian Northern Railway are reported to have acquired property for a terminal on the Fraser river at New Westminster. They have also acquired in connection with the transaction, it is said, the mill property formerly owned by Small & Bucklin in New Westminster and all the timber controlled by that firm. The railway company's cruisers are now in the field estimating the extent of the timber purchased.

Reports on good authority state that a merger embracing the Rhodes-Curry Company, the Dominion Car & Foundry Company, and the Canada Car Company is being effected, with a capitalization of \$10,000,000. The capital of the Rhodes-Curry Company is \$2,850,000; that of the Dominion Car & Foundry Company, \$3,510,900, and that of the Canada Car Company \$3,000,000. The output of the three plants will be about 150 cars a day.

J. D. McLaughlin, of Mill Cove, Queen's County, N.B., one of the leading lumbermen of the province, has concluded a deal with the Stetson-Cutler firm for their valuable timber lands at the head waters of the Tobique. Mr. McLaughlin has figured very largely in the lumber business of the province within the last few years and this recent acquisition to his already extensive lumber limits in Victoria County places him amongst the leading lumber kings of the province.

Lord Northcliffe's paper and pulpwood manufacturing industries, at Grand Falls, N.B., on which more than \$6,000,000 have already been expended, were formally opened on October 8th. Lord Northcliffe, proprietor of the London "Daily Mail" and a number of other English publications, Lady Northcliffe and a party of distinguished Britishers, were in attendance. The plant is exceeded in size only by the paper mills at Millinocket, Maine. The establishment of the plant is responsible for the building of the town of Grand Falls.

The effect of the strike at Glace Bay, N.S., is keenly felt by the residents along the Mira. Hundreds of dozens of pit props are piled on either side of

the river, and it looks as if they were to remain there for an indefinite period. The usual winter timbering is not looked forward to with such bright prospects as in the past. It is expected, however, that whenever the strike is settled, there will be a boom in timbering, as it is believed that two or three times the usual quantity of pit props will be required to put the mines in proper condition.

P. G. Mahoney, the well known Melrose, N.B., lumberman, has purchased from Senator Wood the lumber land known as the Calhoun property. This property contains in the vicinity of 30,000 acres, also a farm, store, mill and a number of houses at Calhouns. It is one of the finest blocks of lumber land in the province. It has not been operated on for twelve or fifteen years, and according to report contains a vast quantity of excellent lumber. The property can be operated from the Sackville or Aboushagan road end, and also from Calhouns. With the purchase of this property, Mr. Mahoney becomes one of the largest proprietors of lumber land in the province, owning large tracts at his home in Botsford, at Brookline, and also at Bathurst, where he has been operating extensively for several years.

Western Canada.

W. J. Holcomb & Son, lumber manufacturers, Trail, B.C., have dissolved partnership.

Marks & Company, lumber merchants, Winnipeg, Man., have sold out their business.

McDonald Bros., lumber merchants, Tyvan, Sask., have been succeeded by Bakery & Reynolds.

A strip of country 20 miles long by 8 miles wide has been burned over and considerable amount of damage done in the timber reserves near Elk Park, Alta.

The city storekeeper of Vancouver has sold the sawmill and equipment which was used by the waterworks department for getting out the staves for the Seymour creek pipeline, receiving \$2,300 cash for the plant.

A dispatch of October 6th reports a fire raging 32 miles north of Oak Point, Man. It was started over a week previously on the Dog Creek Indian Reserve. Since then it had burned hundreds of square miles of prairie sod and timber.

The plant of the Hunting Lumber Company has again been visited by fire. The shingle mill, planing mill and other buildings were destroyed, the loss being estimated at about \$100,000. The insurance is said to be about \$45,000. The fire originated in the dry kiln.

The Westminster Mill Company, which is at present erecting a shingle mill on the north end of Lulu island, has decided to put up an extensive sawmill as soon as the former is completed. The new mill will have a capacity of 75,000 feet a day and will employ 100 men.

The sawmill of F. C. Trethewey, at Chilliwack, B.C., has been destroyed by fire. The mill buildings are a total loss, and the machinery is badly wrecked. The damage will be between \$16,000 and \$20,000, and of \$8,000 worth of lumber in the yards about half was saved. The insurance amounts to \$4,800.

C. O. Rodgers, of Creston, B.C., is building another large sawmill on his property at block 812 at Canyon City, eight miles from Creston. The machinery for the mill has all been secured. This mill is a very heavy portable one and will have a capacity of 20,000 feet of lumber per day. It is expected that it will be in operation by Nov. 1 next.

The deepening of the harbor at Victoria, B.C., has progressed so satisfactorily that there is now an entrance of twenty feet at low water. This will be a great benefit to the city, and especially to the lumber industry. Until quite recently it was impossible for the Sayward mill to do a shipping business, as the inner harbor was too shallow. Large vessels will now be able to load directly from the mill.

R. McAllister & Sons, New Westminster, B.C., have disposed of their lumber mill and timber limits on the Scott road to J. C. Campbell, of Vancouver, and J. C. Laidlaw, of New Westminster. The purchase price was in the neighborhood of \$15,000. The purchasers expect to operate the mill, using not only the timber on the limits purchased but also some from limits of their own in the same vicinity. The mill is equipped with modern machinery and has a capacity of 20,000 feet of lumber per day.

It is reported that the purchase of the Sayward mills, at Victoria, B.C., by the Michigan Pacific Company has been completed. The sum involved is placed in the neighborhood of \$1,000,000. The property consists of the mills on Rock Bay, which are among the most complete, although not the largest, in the province. They have a capacity of 80,000 feet a day, and this is to be more than doubled by the new owners. In addition to the mills the deal involves Mr. Sayward's holdings at Powell lake and throughout the district which bears his name. About 32,000 acres belonging to Mr. Sayward at Jordan river were sold by him to the same purchasers some time ago, and are now being logged, the logs finding a market at the local mills.

The manufacture of pulp has been commenced at the plant of the Canadian Pacific Sulphite Pulp Company, at Swanson Bay, B.C. Orders have already been received from Japan, and the next freighter going to the Orient will carry some of British Columbia's first pulp. Previous to the starting of the machinery, the making of acid was proceeded with, and analyses demonstrated that the acid produced at the works was of very high grade. The success of this enterprise at Swanson Bay will mean much to British Columbia, which has large areas available for the production of pulp. The Canadian Pacific Sulphite Pulp Company has expended about \$800,000 in the construction of its plant. The capacity of the plant is 25 tons of pulp per day.

A controlling interest in timber and coal lands on Queen Charlotte island has been purchased by J. A. Moore, of Seattle, and Herbert S. Law, of San Francisco. The property is Crown granted and contains about 20,500 acres of timber lands with coal measures underlying. The price paid was about \$1,000,000. Engineers are now on the ground considering the location of a route for the railway, which will be built from deep water into the limits. The objective shipping point will be on Skidegate Inlet. The railway will cross onto Lena island, which is separated from the mainland by shallow water. On Lena island the bunkers will be erected and wharves located. The railway necessary to connect with the property will be about 17 miles long, and will be of standard gauge. It is estimated that its cost will reach half a million. The coal will be developed at once, and following that, the intention is to dispose of the timber to other interests who will use the railway to ship the logs to deep water, where the mills will be located. It is estimated that 420,000,000 feet of high class timber and 50,000,000 feet of smaller sized logs, are on the property.

The Shimer Cutter Heads

Are Absolutely Dependable

At all times and under all conditions of operation. They have proven their worth in thousands of mills and are considered an absolute necessity by many pleased users.

The Importance of Good Cutter Heads

With no delicate parts to break down or soon wear out, cannot be over-estimated. There are few who realize the great strain to which these tools are subjected and the necessity for safe and lasting quality. In the evolution of the SHIMER CUTTER HEAD, crude forms and inefficient designs which formerly were used have been displaced by simple, direct and effective devices.

Solid Steel Forgings

Of 60,000 pounds tensile strength, forged under a powerful steam hammer until the grain is further refined and solidified, have superseded cast metals for strength.

Only a Trial Needed

To demonstrate their good qualities. Send to us for full particulars and learn the low prices at which we can fit you out with the best Steel Forged Cutter Heads that can be produced.

The
**Original Dunbar Improved
Shingle Machine**

RESULTS

in shingle manufacturing depend largely upon having the machine constantly producing a high grade shingle.

The DUNBAR IMPROVED SHINGLE MACHINE meets these requirements fully and squarely and further, being practically automatic, does not require a high priced workman to handle and run it.

The Efficiency Test of any machine is the average of the volume of work and cost of repairs for one year. The "DUNBAR" works year in and year out with accuracy and ease of operation and without appreciable expense for repairs.

A pleasure to give further information.

McFarlane, Thompson & Anderson Mfg. Co.
Fredericton, N. B.

Keeping the Cutter Head True

Woods Planer and Matcher with Top and Bottom Truing Devices out of use.

This is the secret of all success in the working of lumber. But it's no secret that the **Woods Truing Devices** make such success possible, for they true the knives to a perfect cutting circle **while running**. It's the feature that makes them distinctive and eliminates the effect of distortion due to centrifugal force.

The **Woods Truing Devices** are permanent attachments of the machine. They can be used at any time without disturbing any other adjustments, and therefore make possible frequent sharpening and insure the highest grade finish at all times.

DISSTON

For Seventy Years the Standard of Excellence

From the very beginning Disston Saws have been made to withstand the only test that genuinely stamps superiority—
THE TEST OF TIME—THE TEST OF WEAR.

Seventy years ago Henry Disston made the finest saws in America. To day, as in 1840, the line represents the very best that science, energy, skill and superior materials can produce. The employment of absolutely modern methods by Henry Disston & Sons, Inc., maintains a lead as relatively great in 1909 as it was in the time of the founder.

Why DISSTON
Means Perfection

In Saws and
other Tools

This excellence is characteristic of all Disston made tools and saws, a few of which are illustrated on this page

The life of a saw is in the steel. We have manufactured crucible steel since 1855, when, recognizing the importance of making our own steel in order to obtain satisfactory quality, we established the first plant of its kind in America. Numerous and extensive improvements since then have made it the largest and best of its kind—there is no other saw-manufacturing plant that makes the steel for its full line.

Disston Steel is of a special formula, which in connection with its treatment in the Disston shops, renders it impossible of duplication outside of the Disston works. This is one reason why imitations lack the uniformity and quality of the Disston saws.

Practically every hardware dealer and general store in the entire world, recognizing the immense superiority of Disston made saws and tools, carries them in stock and recommends them. "The Disston Hand-Book on Saws" (200 pages) is the most complete, authoritative and informative book of its kind ever issued. To those really interested in saws, it will be sent free of charge.

HENRY DISSTON & SONS, INC.,

Keystone Saw, Tool, Steel and File works

PHILADELPHIA, PENNSYLVANIA

The Madison Williams Manufacturing Co., Limited

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

WE CAN ALSO INTEREST YOU IN

Saw Mill Machinery

We build a complete line for any desired capacity.

Our **Triumph Turbines** are unexcelled. They will give more power than any other Water Wheel on the market.

Cables Carried in Stock for Renewals

The cheapest way to skid and load logs is by steam power. The

Universal Logger

is a combined two line skidder and loader with separate engine for loading with steel skidding boom and steel swinging loading boom.

It is self-propelling, spots its own cars and moves rapidly from point to point, saving time and the usual switching expense.

Ample water tank capacity is located between the trucks, and the frame is constructed to permit empty cars to pass through the machine for loading by means of its own power.

This machine is especially adapted for light steel or wooden rails.

Duluth, Minn.

C-103

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. All such Claims are FALSE, as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"

REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Manufacturers of **Sawmill, Shingle, Lath and Transmission Machinery**

Style "B" for Mill Furnace

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one:—

Berriedale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited, Orillia.

Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

PETERBORO SAW MILLS

How You Can Increase Your Net Profits \$2,000.00

This **FOUR INCH STEAM SET WORKS** will do it.

Figure it out this way :

In the first place, our customers themselves state they are cutting on an average 2,000 feet more lumber per day with this setter.

And an average sawing season contains 150 working days.

That is, your cut will be increased 300,000 feet per season.

Now what is it going to cost you to cut that 300,000 feet?

The machine, plus freight and installation charges, plus interest, will cost you about \$720.00.

That is \$2.40 per thousand feet of your extra cut.

And then you will have to add the cost per thousand feet of your logs—you know exactly what that is.

The result is the **TOTAL COST OF THE EXTRA 300,000 FEET** you cut, because your operating charges have remained exactly the same, no extra wages, no extra wear on your machinery.

Now you will receive an average price of at least \$20.00 per thousand for that lumber.

Deduct from that your total cost per thousand feet for this extra output, and

You will find your total profit is over \$2,000.00.

That is, the machine pays for itself in one year, and makes \$2,000.00 extra profit for you besides.

Would you like to go further into this matter? Write us.

ty at current prices.

**Reliable
Veterinary
Remedies**

No logging outfit is complete without a
supply of reliable veterinary remedies.
Getting the wrong kind means the loss
of the use of your horses when time is
valuable.

Johnson's Veterinary Remedies
are guaranteed never to fail when used
as directed. You get your money back if
they ever do.

They are

Johnson's Horse Liniment No. 1.

A penetrating Alcoholic Liniment.
Put up in one gallon jugs, with full
directions, per imperial gal. \$4.50

Johnson's Horse Liniment No. 2.

A combination of the best oils used
as liniments, imp. gallon . \$3.00

Johnson's Horse Colic Remedy.

A sure and speedy cure for colic
Imperial gallon \$5.00

Johnson's Veterinary Healing Ointment.

Positively the best all-round healing
ointment made. In use by the largest
owners of horse flesh in Canada.

Put up in 2 lb tins, each . . \$2.25

or in $\frac{1}{4}$ lb tins, per dozen . . \$3.50

Johnson's Condition Powders. (Con-
centrated).

Put up in bulk, per lb . . . 30c.

These goods being put up in bulk are
more economical than others, as cost of
bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Rem-
edies we make a line of medicines for lum-
bermen, including a strong, penetrating
liniment, healing ointment, cholera cure,
liver pills, cough syrup, in fact anything
in the form of Camp Drug Supplies. We
know that there are no better remedies
made than those we offer. There may be
others nearly as good, but they lack our
guarantee. Satisfaction or money back.

A trade discount of 10% allowed off all
orders amounting to \$100.

Send postal for printed matter.

Style "B" for Mill Furnace

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one:—

Berriedale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited, Orillia.
Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

New Model Diamond Shaking and Dumping Grate Bar

We handle Boiler Flues, both new and welded; at lowest prices.

The demand for the Diamond Grate has increased by 50 per cent. during the last 2 months and is giving splendid satisfaction to all our customers. Burning all grades of fuel with the very best results. All live Mill Managers and Engineers would do well to consult us when requiring new Bars. **These Grate Bars are warranted not to be an infringement on any prior patents. We stand behind our customers and guarantee them in the unmolested use of our own invention.**

We make a specialty of Boiler Setting and repairs to Boilers, employing none but expert workmen.

A post card or personal enquiry will bring a prompt reply.

Cheapen Your Logging

By Using the Lidgerwood Skidding Method

The machine shown in the cut above will pull itself on snow or bare ground wherever a pair of horses could take a drag sled, dray, jumper, skidding or single sled. From any location alongside such road it will reach to the stump a distance of one-quarter mile or less in every direction and will skid all trees in full length or in log lengths. It will place the logs on skids or sleds or in the stream or lake as desired. It will re-yard logs, either taking the logs direct from teams or from the skidway, or where left by itself at a previous setting. It operates throughout the year and is absolutely independent of ground conditions; that is, such as windfalls, underbush, rocks, cliffs, ravines, or the steepest slopes, operating under such conditions almost as cheaply as over smooth ground.

All swamping, rolling, sliding and expensive cant dog or other hand work is eliminated. It does not fill the logs full of gravel and it does not break or otherwise damage them.

It requires a skidding crew of eight men, uses for fuel one and one-half cords of wood per day, and has a skidding capacity of from 15,000 to 45,000 feet per day, and a re-yarding capacity of from 35,000 to 50,000 feet per day, depending on the timber conditions and management. It will skid the largest tree or a cord of pulpwood, or several small logs at each trip. It will clear 40 to 60 acres at each setting, moves itself quickly from setting to setting, operates independent of weather conditions, does not "eat" when not working, does not have to be "sprung out" and has a working life of fifteen years.

There are several hundred of these machines now operating in the United States and Mexico. There have just been installed in Canada.

We now have a representative in Canada, who will examine your conditions and tell you what can be done, free of charge of any nature.

The
**Original Dunbar Improved
Shingle Machine**

RESULTS

in shingle manufacturing depend largely upon having the machine constantly producing a high grade shingle.

The DUNBAR IMPROVED SHINGLE MACHINE meets these requirements fully and squarely and further, being practically automatic, does not require a high priced workman to handle and run it.

The Efficiency Test of any machine is the average of the volume of work and cost of repairs for one year. The "DUNBAR" works year in and year out with accuracy and ease of operation and without appreciable expense for repairs.

A pleasure to give further information.

SIMONDS

**Inserted
Point
Saws**

**Made
in
Montreal**

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take \$100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

TERMS OF SUBSCRIPTION:

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 29

Toronto, November 1, 1909

No. 21

Encouraging Lumber Trade Statistics

So far as the trade statistics published by the Dominion Government are an indication of trade conditions, the lumbering industry during recent months has been making good progress toward a condition of renewed activity. Extensive transactions may not mean good prices, but coming after a period of dulness, during which manufacturers have followed a policy of holding stocks rather than selling them at a sacrifice, and after which confidence in the stability of commercial, monetary and industrial conditions has been steadily renewed, extensive transactions have an encouraging significance which none but a dyed-in-the-wool pessimist will fail to accept. They mean a return of prosperity to those proportions which can only come about when a country has plenty of valuable raw materials and plenty of ambitious and practical business men, and when, in the world at large, conditions are favorable to the existence of an active demand. These conditions have been created in connection with Canada's lumbering industry during the past few months. Whether they are to be permanent is beyond the ken of man, but they have all the ear marks of permanency, and of greater growth.

In this connection the condition of the lumbering industry may be accepted as fairly indicative of the other industries of the country. Lumbering is a good barometer of general trade conditions in Canada. It is significant, therefore, that during the month of August of the present year, the exports of forest products amounted in value to \$6,090,329, whereas in August, 1908, the total was only \$4,561,223. A further interesting point is that during August the exports of forest products were only exceeded in value by those of one other natural product of the country, viz., animals, the value of the exports of which was \$7,282,103. The value of the exports of agricultural produce has now to take the

third place, being less than that of the forest products. During the five months ending with August the total value of exports was as follows: forest products, 1909, \$20,896,554; 1908, \$17,993,704. Imports of forest products for August, 1909, were valued at \$664,686, and for the five months ending with August the total value was \$3,438,902.

The figures for July and for the four months ending with July are equally indicative of prosperous times ahead. The exports of forest products made a new high record for the month of July. The best previous July was in 1907, when the value of the exports was \$5,900,518. This year the total for July was \$5,964,863. This marks another important step in the progress of the lumbering industry in Canada, as the exports are again second in value among the divisions of natural products exported. Animal produce still leads, the total for July being \$6,559,357, but agricultural products, which formerly occupied second place, have fallen to third, the total exports for July being \$5,430,034. Not since 1905 have the July exports of forest products exceeded those of agricultural products. In that year the July totals were: forest products, \$3,090,467; agricultural products, \$1,861,940. For the four months ending with July the totals in 1909 were as follows: forest products, \$14,806,225, the best on record with the exception of 1906; animal produce, \$16,036,700; agricultural products, \$20,908,210. The imports of wood and its manufactures into Canada for July, 1909, were valued at \$956,605, against \$765,240 in July, 1908. For the four months ending with July the value of imports was: 1909, \$3,859,952; 1908, \$2,908,160; 1907, \$5,415,504.

Publicity—A Business Commodity

The following item appeared in a country paper of recent issue: "The other day a merchant saw a farmer receiving goods at the station from a mail order house. The goods were in his line, and the same had been carried in his store for years. He approached the farmer and said: 'I could have sold you every article you have for less money than you paid the mail order house, and saved you the freight, besides.' 'Then why on earth don't you say so?' answered the farmer. 'I have taken the local paper for years, and have never seen a line about your selling these goods. The mail order house sent advertising matter to me asking for my trade, and they got it.'"

There are all sorts of ways of advertising one's goods. The mail order method has been developed along a scientific basis and it brings results. Publicity of an even better quality can be obtained by judicious advertising in the trade press. This is no business exaggeration but a plain business fact, the truth of which has been proved times beyond number.

The value of trade journal advertising can be easily put to a practical and convincing test by looking through the pages of the "Canada Lumberman." Nothing will be more noticeable than the fact that a list of the advertisers found therein includes the majority of the successful firms in Canada and many of those in other countries. Their names are intimately known to all lumbermen, and their products are equally familiar. The reason is not far to seek. These firms have realized that the best method of obtaining publicity is to keep their names and products continually before the trade. The key to business success is continual publicity, backed up by good quality of products and fair dealing with customers. Spasmodic publicity will have only spasmodic results. In advertising, as in everything else, success comes from keeping everlastingly at it.

It is interesting to note how differently advertising is regarded to-day compared with what it was a few years ago. It is not many years since a good advertisement was believed to be one designed like a trap, to draw an unwilling reader on until he had gone so far that his inclination was to read on to the end. The reader was given no credit for a natural curiosity and desire to find out how he could make the best use of his money. One day someone found out that an advertisement could be made as instructive and as interesting as a bit of news, or as an editorial article. From that day to this, advertising has become a plain business proposition and the lot of the advertising agent has been greatly simplified. Advertising campaigns of to-day are based upon well defined rules, and the results can be foretold with a certainty which a few years ago seemed impossible. The fundamental rule is to create a desire. In some cases the desire already exists, but in most cases a desire already

existing has already been satisfied before the advertisement is read. Primarily, therefore, an advertisement takes for granted a latent desire and concerns itself with stirring it up. This is a preliminary step and must be followed by convincing the reader that his desire can best be satisfied by purchasing the advertiser's goods. It is essential, therefore, to have goods which measure up to their advertised qualities and to make the reader realize this. Advertising, to have lasting results therefore, needs to be planned with minute care. There is danger in saying too much and there is wastefulness in saying too little, or not saying it often enough. A good advertisement will give precise information about the

products advertised and will do so in an attractive manner. Advertising is not charity to the publisher. If so, it must be without results and soon be withdrawn. It is, in effect, a definite commodity of measured and distinct value. It should be considered as such by those who buy it. They should examine it carefully when buying, seeing that they do not simply buy space, but that they buy an opportunity to present good arguments to possible purchasers. This opportunity is to be found nowhere to so distinct advantage as in the trade journal, with its specialized circulation and its unequalled facilities for carrying conviction to its readers.

A Serious International Feature of the St. John River Difficulty

The International Waterways Commission, which has been considering, among other matters, the troubles arising out of the St. John river log driving difficulties in New Brunswick, has entered into the study of a feature of the question which possibly contains the kernel of the whole difficulty. An engineer has been sent by the commission to obtain accurate information regarding Chamberlain lake and the effect upon the St. John river, of the diversion of its head waters by way of Chamberlain lake into the Penobscot river in the State of Maine. It is more than probable that the investigation will show that much of the trouble in connection with the St. John river log driving is the result of this diversion of its headwaters. Chamberlain lake is only a small portion of the drainage area which supplies the St. John river and which has been tapped by the construction of dams and canals from that lake to the Penobscot.

At first glance one might think that the Americans were justified in constructing these works, as they lie entirely within the State of Maine, but the situation has a distinct international character. Water which should naturally flow down the St. John river is taken away, and during the summer months incalculable loss is caused to those who use this river for log driving and for other purposes, including the development of power. Mr. D. O. Bourgois has recently written a letter upon the subject to the St. John "Telegraph" which puts the matter in a strong light. He claims that the diversion of the water was a violation of international law, and that the trouble between lumbermen on the

upper St. John and those down below about the delay caused by sorting logs would never have existed, if this lake area were still tributary to the St. John river. Under the old conditions logs could be driven on the Penobscot only in the spring freshet. Now, with the water taken from the headwaters of the St. John, logs can be driven on the Penobscot from the melting of the ice until the river freezes again. A significant statement is made by Mr. Bourgois which, if true, throws a light upon the situation. He states that the counsel for the American commissioners is reported to claim that the question of restoring the diverted water is beyond the scope of the commission's authority to inquire into. If an international commission cannot take this matter up, it should be made the subject of other immediate international negotiations.

It would be premature to make any definite claims in regard to this question before it has been investigated by an impartial commission. Surely, however, just such a question is within the scope of the present existing commission? The terms of the Ashburton treaty have apparently been violated and Canadians have suffered great loss through the action of foreigners which they were powerless to prevent. If the matter is not remedied soon it may be that the Americans will claim that their own rights have become established by lapse of time. The rights of Canadians, however, were similarly established by the lapse of a still greater time and were founded upon a natural geographical condition. It is the duty of the Canadian Government to see that this matter is settled in accordance with the principles of justice with the least possible delay.

Export of Paper and Pulp from Canada to the United States

In connection with the tariff difficulties which have developed from the change in the United States duty on paper and pulp, instructive information is available in the annual report of the Canadian Department of Trade and Commerce for the fiscal year ending March 31 last. Apparently the duty on wrapping paper was quite sufficient, as only \$5 worth was sold by Canada to the United States. The quantity was 85 pounds. During the preceding twelve months the sales amounted to 297 tons, valued at \$24,256. As to printing paper, however, the results were different. The sales by Canada to the United States amounted in value to \$914,657, against \$792,608 in the previous year. A few years ago the sales totalled less than \$200,000 a year. There was a shrinkage in the wall paper sold in 1908-9 to 7,930 rolls, worth \$1,440, from 21,669 rolls the previous term, at a value of \$7,341. Felt sales dropped from \$102,000 to \$12,000. The most important item was wood pulp. Chemically prepared wood pulp sold by Canada to the United States amounted in value to \$1,223,702, compared with \$1,364,030 in the previous year. The quantity decreased from 38,475 tons to 33,520 tons, but the price advanced from \$35.40 to \$36.50 per ton. Mechanically prepared wood pulp sales amounted to 2,500,000 cwt., a decrease of 500,000 cwt. The values were \$1,840,000, compared with \$2,181,000 in the previous year. Canadian purchases of paper of all kinds from the United States amounted in value to \$2,500,000, and in the previous year the value was \$2,800,000.

These figures are an eloquent proof that it would be to the advantage of Canadians if Governmental action prevented the export of pulpwood and did the utmost possible to encourage the establishing of paper mills in Canada, which could utilize the large quantity of pulp now exported to United States mills. The pulpwood situation, however, is not the only one of interest to develop out of the tariff. The shingle situation in British

Columbia and the rough lumber situation, in Ontario present features of importance. The shingle industry in British Columbia, it is reported, has received a body blow from the new tariff, as British Columbia shingles have been completely shut out of the United States markets. Fortunately, however, a new demand has sprung up in the prairie provinces which promises to compensate amply for the loss of the United States trade.

The most important result of the passage of the tariff bill, so far, has been the return of trade activity. The demand for lumber in the United States has increased steadily and the manufacturers of Ontario in particular, have benefited by the improvement. Manufacturers in the United States now know fairly well, where they are, so far as the tariff is concerned, and where they will be for the next four or five years at least. Expenditures are being made which have been held back, by the business depression and the tariff uncertainty. Dealers are able to sell good and medium grades of lumber practically as fast as they can obtain them. Ontario products in particular are streaming into the United States as they have not done for a long time past.

Reverting to the pulpwood question, it is regrettable that there should be so much talk of a tariff war. The situation is readily resolved into natural factors. The people of the United States wish to provide in the most business-like fashion for the perpetuation of their paper making industry. Canadians, with equal common sense, have in view the protection of their pulpwood forests from destruction and the development of a large paper making business in Canada. Perhaps these two results are incompatible with one another. Perhaps, also, they can be harmonized. Whichever is the case, there is no tariff war at present, nor is there likely to be one. If Canadians find that their only feasible course is to prohibit the export of pulpwood, those who are in charge of the tariff policy of

the United States will probably be among the first to recognize the reasonableness of such a course. They may believe that a high duty against Canadian paper will assist their own factories, and possibly they may be right. If there is truth, however, in the reports of the scarcity of pulpwood in the United States, it is a simple mathematical problem to prove that a high duty on Canadian paper will be of no value to the United States factories. It may be that the situation in the United

States is not so critical as it appears. The conditions prevailing to-day are precisely those which in other industries have led to the devising of new means for overcoming new difficulties. Conservation methods may come to the rescue, before a crisis occurs, or new raw materials may be found. It is much too early to predict a crisis and it would be unneighborly to encourage a tariff war, when the tendency of the times is all in the other direction.

English Markets Now More Attractive to Canadian Shippers

The spruce import business at Liverpool, Eng., is looked upon with comparative satisfaction by the London "Timber Trades Journal," which deals with the subject as follows: "The end of the spruce import season is now fast approaching, there being very few cargoes, so far as we can gather, to come forward, and as these are sold at full prices, there can be no question of decline in values for the present. That values have maintained themselves proves very conclusively, we think, how firm the market is, for this reason, that had there been any fictitious value placed upon the goods it would have been apparent some time ago. Trade, it will be generally admitted, has been, taking it all round, of a very desultory and hand-to-mouth character, and every order of any weight has been keenly competed for by the various importers, and yet values have remained firm. We admit that several orders have been taken by some of the leading importers at very low prices, but these may have been taken in a speculative way, and have not had any real influence on the market. As we have previously stated in former issues, should such a thing happen as a marked improvement in trade, values are bound to increase, and that increase will be considerable. There has been a good deal of talk about things looking brighter, but we are pleased to be able to say that it is not all talk, and that trade generally is improving. Of course, it will be urged that even if cargoes maintain their value right up to the end of the season, there is always the possibility of liner parcels coming along and upsetting the market. This may be so, but while arguing from this basis it is as well to consider all the facts of the case, and it must be remembered that freights are increasing and are likely to go higher yet; therefore, for the time being, we can safely say that there is very little chance, if any, of a decline in values this year. While there is such a large quantity of stuff on the various quays as there is at the present time, it is almost impossible to say with any accuracy if there is any genuine shortage of a given dimension or size, but we do know that there is a great scarcity of imported spruce boards, and values are very firm, and holders would do well to note this fact. Taking a look round the stocks, what strikes one most forcibly is the small quantity of wagon lengths in 3x9 and 3x11 inch. Of course, these may be greatly augmented with what is now on the quay, but we think that when stocks are revised at the end of October the shortage of these lengths, i.e., 14 to 16 feet, will be realized more fully. Another feature of this season's cargoes is the absence of lengths over 18 feet. It used to be a fairly easy matter to obtain a fair quantity of lengths 19 feet and upwards, but from the specifications we have seen this season, they contain very few of these lengths, the usual average length of about 14 to 14½ feet being made up with a large quantity of 15 to 17 feet. This is all very well in

the 9 and 11x3-inch, but there is a constant demand for something longer, and this is hard to fulfil.

"There is not a large quantity of birch planks on the quay at the present time, but stocks are ample for the demand, which does not appear to be quite so good as it was, not that there has been anything like the usual demand for some time; but, fortunately, there has not been a very large quantity imported this season. Prices are a little easier, but the decline is not appreciable, and a little better demand would soon bring about an increase. Stocks are mainly composed of 3-inch, with a sprinkling of 2 and 4-inch, but very few 2½-inch, and no 5-inch. With regard to logs, the demand has fallen off considerably, but, notwithstanding this, values remain fairly firm. At the present rate of consumption stocks are ample for requirements for some time.

"Timber," of London, Eng., dealing with conditions at Glasgow, says: "Prices are very firm, and as advices from the States and Canada continue to report a steady improvement in trading conditions and increasing scarcity of stock, there is every probability of values further appreciating during the next month or two. There has been rather more inquiry for Canadian pine of late, and buyers would do well apparently to cover requirements at the present attractive prices, as the Quebec shippers are unanimous in their opinion that much higher prices will rule next year. No doubt this prophecy has a familiar ring about it, and has been frequently falsified in the past, but this time there appears to be sufficient evidence to accept it as probably correct, as the Americans are already picking up Canadian stock, and it is they who have in the past put up prices, it should be remembered. No doubt it will have the effect of further driving this fine wood out of use here, but Canada nowadays is less dependent upon the British market as an outlet for their surplus stock, and this tendency is being accentuated more and more every year. There has been a fair movement in spruce lately, and prices are decidedly firmer than a month ago, and it appears as if they may go higher, particularly Quebec deals, which are by no means plentiful."

The Liverpool correspondent of the same journal refers to conditions as follows: "To show that there is a genuine revival of business on the other side of the Atlantic, I can quote an interesting conversation I have had with one of the largest dealers in Quebec pine at this port. He asserts as gospel truth that in order to obtain their supplies for this market again next year they will have to pay the very considerable advances, which are being asked by Canadian manufacturers. He tells me that the American buyers are bidding to-day furiously for large supplies, and that the Canadians are in a perfectly independent position, being able to play one set of buyers off against another."

Considerable Improvement Noted in Western Lumber Business

The Crown timber agent at New Westminster reports that the condition of the lumber business in British Columbia improved considerably during the previous three months, and he considered that with careful management the business this year would be found very satisfactory indeed. The demand from the prairie provinces was then much in excess of last year, and as retail stocks on hand were very much below the average it was expected that with the increase of population the demand would continue. The receipts of the office for the year amounted to \$48,787.39. This was a considerable falling off from the previous year, when the receipts were \$63,670.77.

The Crown timber agent at Edmonton reports the total operations in his district for the year show an increase over those of the previous year, the increase in the amount cut under settlers' permits being very marked. The operations of the larger concerns, however, show a de-

crease, the supply of lumber being more than equal to the demand. The average price at which lumber was sold would appear to be \$13.70, as against \$15 for the preceding year.

The following is the cut for the year: By licensed berth owners, 6,679,117 feet; by permit berth owners, 6,457,236 feet; by portable mills under settlers' permits, 11,780,672 feet.

The Crown timber agent at Prince Albert reports that there was a decided increase over the preceding year both in volume of work and revenue collected, the total receipts being \$38,229.53, as against \$28,333.74 for the previous twelve months. The sales of lumber manufactured under license show an increase of 13,362,450 feet, while the average price per thousand feet shows \$17.54¾, being a reduction of \$3.35¾ as compared with last year. The average number of feet per log on licensed berths is shown as 58 14-15, and on permit berths as 30¾.

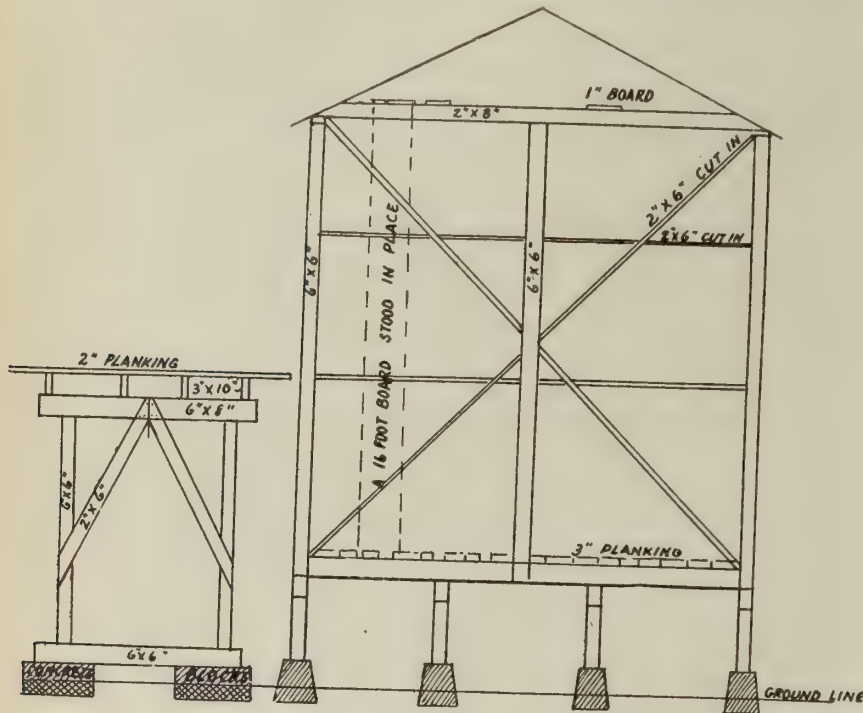

A Practical Shed for End-Drying

Permanent Structure for Storing High Grade Stock while Seasoning—
Interesting Description of a System which has been Tested by Actual Use

With the increasing value of high grade lumber and with the higher price obtained for lumber of this character seasoned in the best possible way, producers generally are interested in a system of drying the better grade stock on end under permanent sheds.

This is a detail of hardwood lumber production that has been practiced in the State of Michigan for many years. It has been found necessary, in order to season white maple free from sticker marks and absolutely white, to handle it in this way.

Mr. Henry Ballou, superintendent of Cobbs & Mitchell, inc., of Cadillac, Mich., who is an expert in the handling of lumber in this way,

End Cross Section—End Piling Lumber Shed.

contributed a letter on the subject recently, to the "Hardwood Record." Mr. Ballou supplies the accompanying drawings for the end and side elevations of the model end-drying shed. Following is the letter accompanying the sketches:

To begin with, we know by experience that it is quite essential to have very substantial foundations for these buildings, as the weight that is created in them is immense. Our first white maple shed was put on heavy posts and we found that in about five years these posts began to rot and settle, making it necessary to build new and permanent foundations. In repairing the old part of the shed, we built a cement pier under each post, but in building an additional 100 feet of shed to this building, we found we could save time by building a long, shallow slab of concrete that has made a very substantial, durable and inexpensive foundation. Therefore, in erecting a new building we would recommend as follows:

You will note by the pencil sketch enclosed that I have attempted to show you a side elevation as well as the end elevation, the shed being 16 feet high for the purpose of end-sticking lumber 8 feet to 16 feet long. If the lumber was all to be 16 feet long, it would be necessary to have the studding at least 17 feet long, in place of 16 feet, as you note by the end sketch that a board 16 feet long extends up above the ceiling joists. This sketch was made on a scale of 8 feet to 1 inch and shows the concrete foundations to be 10 inches wide at the top and 14 inches wide at the bottom, and running the full length of the building. The planking to be used for the floor should be laid with two to three-inch openings, so that a good circulation of air could be secured up through the floor. You will also note that the floor appears to be quite high from the ground, but this is essential, as you must create all the circulation of air through the building that you can.

In building these sheds, particular pains should be taken in guarding against the building falling down, as it is impossible to properly stay the building without interfering with the piling room on the inside of the building, it being a perfect shell. We have adopted the plan of building our sheds in 48-foot sections, and therefore we would recommend that, regardless of how long the building is, the bulkhead or partition should be created every 48 feet, built up of 6x6, so as to hold the building from leaning endways, as it is very difficult to keep the lumber perfectly per-

pendicular. It is bound to lean some, and after it once begins to lean there is a great pressure on the building.

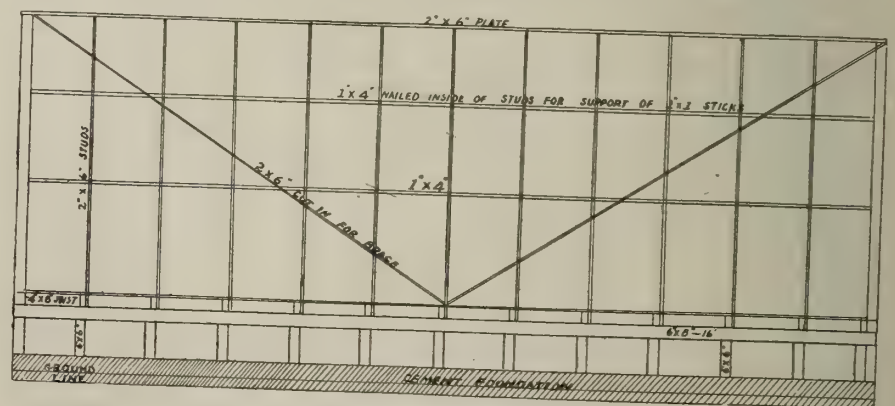

In this territory, you understand, we use tramways for everything, and therefore we are not familiar with the idea of handling lumber on waggons. These sheds are successfully operated by having a tramway running along the side of the building, on which can be operated tram cars or two-wheeled trucks, and the lumber passed into the building at the side and stood to place.

Stickers one inch square are used for keeping the layers separated, placing one sticker on the floor, another about 6 feet high and still another about 11 feet high. In putting the lumber to place, a layer of lumber is stood on end with the bottom out about 12 inches, to keep the lumber from falling backwards, and after the layer is complete the upper sticker is put to place and a nail driven into the 4-inch rib just in the rear of the sticker, which will hold the top of the board from falling backwards. Then the bottom end of the board is shoved to place and fastened in the same way. In addition to this, lath twine should be used in the centre of the pile, taking a loop around the centre of the upper sticker each time that a layer is put to place. This will keep the upper stickers from bulging out.

In regard to the roofs for these buildings. If it is required for a term of years, we would advise using roof boards, and then some kind of felt roofing, properly coated, as the lumber must be kept dry from the roof. If it is not desired to use the building for many years, and if lumber suitable for roofing it, lumber that will not curl up or split, can be obtained, a double layer of boards can be used to shed the water. We have also found by experience that the sun and rain beating in at the sides of the building injure the edges of the lumber that are exposed. We have, therefore, adopted the plan of using a four or five-inch piece of cull lumber on the edge of each layer, and in this way the lumber all comes out without any bad appearance on the edges of the boards.

Building the sheds in sections of 48 feet has several convenient features. It allows the lumber to be put in in such a manner that it will brace the building and hold it to position. It also allows the removal of lumber from a seasoned section without interfering with the green piling, and furnishes different sections for the different lumber.

Referring to the matter of creating concrete foundations for lumber piles. This is a matter that we have thought was impractical. We have given the matter considerable study, but on account of the immense weight in a pile of lumber 20 or 25 feet high, we have felt that the expense would be too great, and yet we are not through with an experiment along this line. We now propose to build slabs of concrete 4 inches thick and 18 inches square, and for a pile of lumber 16 feet long and 16 feet wide we will use eight of these slabs under each sticker, leaving about 6 inches of space between them, and on top of this line of slabs we will

Side Cross Section—End Piling Lumber Shed.

lay two 9-inch planks 16 feet long, the object being to keep our wood foundations from touching the ground, thereby causing fast rotting. On top of these planks we will use blocking for the support of the beam that the stickers are to rest upon. You see the front end of the pile is to be raised about three feet from the ground, and therefore we could not afford to build this up all the way with concrete, as blocking and timber would be much cheaper than concrete after you have eliminated the matter of the rotting of the first foundation plank that is usually laid on the ground.

You will note that in putting up a pile 16 feet square, with four stickers, this scheme would call for 32 of these concrete slabs, and in a yard like ours, where we have several thousand piles, the expense would be immense.

We have in our yards about two miles of tramways, and as the left

of these tramways is nothing compared with the heft in the lumber piles, we have adopted the scheme of using two of these slabs under the locking that supports each tramway bent, and this we are finding is quite a practical thing to do. These slabs can be built in forms and then carried and laid to place without any trouble.

Personal News and Trade Notes

R. B. Elgie, of Elgie & Jarvis, Toronto, has left for the north on a buying trip.

Mr. W. A. Charlton, Toronto, is in Vancouver and will visit a number of Western Canadian cities before returning to Toronto.

Mr. C. R. Evarts, of the Detroit Column & Manufacturing Company, Detroit, Mich., paid a welcome visit upon the "Canada Lumbermen" on October 20th.

William Hadley, of the S. Hadley Lumber Company, Chatham, Ont., visited Detroit recently to attend the banquet to the Detroit "Tigers." Mr. Hadley is a real fan.

Col. Davidson, Land Commissioner of the Canadian Northern Lands Company, Toronto, is visiting Vancouver to arrange for the development of some timber lands in British Columbia.

F. R. Roginson and E. J. Ryan, of the J. and T. Charlton Lumber Company, Collingwood, Ont., have returned from a business visit to Cleveland, Ohio. While in Cleveland they were entertained by the Lumbermen's Club.

A. W. Eyer has returned to Toronto after spending the summer at Port Elgin, Ont. Mr. Eyer was unable to repel the temptation to do a little lumber business during his vacation. Accordingly he busied himself with the operation of a local sawmill.

John G. Sutherland, who for many years has been manager of sales for the Sault Ste. Marie Pulp & Paper Company, and traffic manager of the Algoma Central Railway, has resigned and gone to Minneapolis, where he will be sales manager for the Minnesota & Ontario Power Co.

Joseph Chew, of the Joseph Chew Lumber & Shingle Company, Vancouver, B.C., spent several days recently in the eastern territory, making quite a visit at Springfield, Mass., the Fred S. Morse Lumber Company of that city being the exclusive agents in the Eastern States for this Vancouver concern.

W. Robertson, assistant general manager for the Rat Portage Lumber Company, located in Vancouver, was in Winnipeg attending a meeting of the directors of the company. It was decided to erect a sash and door factory on the mill property in Vancouver at once. It will be the largest of its kind in British Columbia, will cost \$100,000 and employ 200 men.

Daniel Wells, vice-president of the White Pine Lumber Company, of Michigan and Ontario, has returned from British Columbia after purchasing a tract of fir and cedar on Vancouver Island, containing between five and six hundred million feet. The tract lies in what is known as the richest timber belt in British Columbia.

F. A. Sullivan, of the Algonquin Lumber Company, Limited, Klock, Ont., visited the "Canada Lumberman" last week. The Algonquin Company have ten square miles of limits at Klock, and have only been operating for a short time. They will cut about 1,000,000 feet this year and probably 4,000,000 next year. Their mill is a new one, with two circular saws, steam feed on one side and cable feed on the other.

Mr. Fred S. Morse, of the Nepisiguit Lumber Company, Limited, Springfield, Mass., has made a couple of visits recently to Bathurst, N.B., where he attended to the taking over of the Adams-Burns Company, Limited, property. The titles have all been passed and the Nepisiguit Company is now in possession. They assumed control of the lumbering operations from Sept. 1. Work has been commenced upon tearing down the mill and plans are being prepared for an entirely new plant. Mr. Morse is again in Bathurst at present and will remain there for two or three weeks.

William P. Dutton, of Winnipeg, Man., proprietor of the Great West Lumber Company, with mill at Greenbush, Sask., was in Chicago recently, where he feels much at home, as formerly he was a resident of Sycamore, Ill. Mr. Dutton cuts spruce, which is, he says, the favorite material for common building purposes in the Canadian Northwest. There is little good lumber in the product, but it is sound knotted, light, white, easily worked, and the carpenters and farmers like it. He says that the demand is in excess of the supply, and that because of the lower freight rates the mills in his district are getting better mill prices than the mountain mills for their higher grade product.

Mr. R. S. Wilson, of the Wilson Lumber Company, Toronto, has returned from a visit to his southern hardwood properties at Davisburg, Kentucky. The L. N. White Lumber Company, at that point, in which Mr. Wilson is interested, has just put into operation an incline railway operating by steam and cable, over a distance of about a mile, connecting the company's property with the Louisville & Nashville Railway.

They bought a hardwood tract from the railway some time ago but have been unable to ship until the present because of the distance from the railway. They have been cutting on the territory for some time, however, and now have a large stock ready for shipment. In view of the high price of oak and its scarcity to-day they are fortunate in being possessed of a good sized stock.

W. S. Howe, formerly advertising manager and in charge of the small tool sales department of the Canadian-Fairbanks Company, Limited, of Montreal, has become associated with the S. A. Woods Machine Company, the planer specialists, Boston. Mr. Howe was with the S. A. Woods Machine Company for about ten years previous to his entrance into the Canadian field, and has returned to join the planer specialists in their work, the development and marketing of planers and moulders for working wood. Mr. Howe made many friends during his stay in Canada, all of whom will be pleased to hear of his continued prosperity. During the past few years the S. A. Woods Machine Company have reduced their line from a great variety of woodworking machines to planers, and as a result of this specialization their machines are said to have attained a very high degree of efficiency.

Eight Months' Imports into United Kingdom

The Board of Trade returns of imports of wood goods into the United Kingdom for the month of September show a big increase both as regards hewn and sawn timbers. Though the imports for the nine months of hewn timbers are somewhat less than those of two previous years, the total for sawn goods is in advance of the figures for last year, and this notwithstanding the Swedish labour troubles. The import from Sweden is down a matter of 240,000 loads as compared with the similar period for last year. Norway shows an advance of 12,000 loads, in itself a healthy indication of the flooring market. Another big increase is to be noted in Russian exports, both on figures for the month and for the nine months. This applies to both hewn and sawn goods, and indicates a very healthy condition of affairs in that country. Canadian and American exports of sawn timbers both show an increase, a state of affairs which, as regards America, is somewhat surprising. There has been during the month a very heavy import of mining timber, though the figures for the nine months are considerably below those of last year, and slightly in advance of those of 1907. With regard to values, the month's import of hewn timbers has led to a very considerable alteration in the figures. Including mining timbers, the values show an advance of £56,000 on the figures for September in last year. The total for the nine months, however, is down very considerably as compared with 1908. With regard to sawn goods, values are considerably in excess on the month for those of last year, and the same applies also to the totals for the nine months. —Timber.

Queensland Lumber Cut on the Increase

The Government statistician, in a report dealing with the sawmilling industry of Queensland for the last year, states that there were 175 mills in operation, and during the year 2,960 hands were employed. The value of machinery, plant and land was set down at £360,181; the mills cut 64,696,000 feet of soft woods, valued at £404,976; 1,125,800 feet of cedar, valued at £18,752; and 349,367 feet of hardwood, valued at £241,622. The total quantity cut last year showed an increase of a little over nine million feet compared with the previous year. While the output for 1908 was greater than that for the previous year, it is lower than that of any previous year in the history of the federation. In 1901 the amount cut was stated to have been 140,443,099 feet. This has never been equaled since that year. In 1906 it was 82,801,846 feet.

The heavy duties placed on the importation of Oregon were intended to encourage the development of the timber trade of Queensland. It is clear that it has failed to accomplish this purpose. While there are large areas of timber land yet in the state, the difficulty and cost of getting the timber to large mills has hindered, and must continue to hinder, the development of the trade unless the prices are very greatly increased. A number of small mills have been erected closer to the limits, but such mills are expensive in operation and are not calculated to do much better than a local trade.

The daily wages of pulp mill and paper hands working for the E. B. Eddy Company, at Hull, Que., during the first six months of 1909, were as follows:

Pulp mill—Foremen, \$4.00; sub-foremen, \$2.00; barkers, \$1.65; screen men, \$1.46 $\frac{2}{3}$; grinders, \$1.60; barkers' helpers, \$1.55 $\frac{5}{8}$; greasers, \$1.65.

Paper mill—Boss machine tenders, \$4.50; machine tenders, \$3.83; bag tenders, \$2.47 $\frac{1}{2}$; third hand, \$1.92 $\frac{1}{2}$; fourth hand, \$1.46 $\frac{2}{3}$; greasers, \$1.65; broke hustlers, \$1.65; paper engineer, \$2.20; paper man, \$1.46 $\frac{2}{3}$; assistant engineer, \$1.65; boss finisher, \$1.92 $\frac{1}{2}$; finishers, \$1.48 $\frac{1}{2}$; laborers, \$1.65. Common laborers were paid from \$1.37 $\frac{1}{2}$ to \$1.50 per day.

Progressive Hamilton Lumber Firm

Formed in 1904—The Long Lumber Company
now among the leading wholesalers of Canada

The Long Lumber Company, of Hamilton, Ont., composed of Messrs. M.S.M. Long and Guy H. Long, whose portraits are published herewith, are highly esteemed throughout the country. These two young men, the elder of whom is about thirty years of age and the younger twenty-eight years of age, commenced business at an early age. Each of them made rapid progress and gave evidence in a very short time of being possessed of that natural business ability which accounts for the success which they have obtained so early in life.

The two Long brothers are sons of the late George Long, who for many years conducted a successful wood and coal business in the city of Hamilton. The elder brother, Mr. M. S. M. Long, was born in 1879, and obtained his preliminary education in the Hamilton public schools after which he attended the Hamilton Collegiate and the Hamilton Business college. Then at the age of sixteen he looked around for a situation, and the first one that he found was in a lumber office. He was soon singled out as a man of promise and at the age of nineteen was foreman of the lumber yard. In 1901 the Nipissing Lumber Company was formed and Mr. Long was appointed secretary, a position which he held for three years. During this time he was engaged both at the mills and in the camps. In 1904 Mr. Long's ambitions led him to commence business for himself as a wholesale dealer in pine and hemlock. It was not many

Guy H. Long—The Long Lumber Co.
Hamilton, Ont.

M. S. M. Long—The Long Lumber Co.
Hamilton, Ont.

months before his business expanded so much that it was too much for him to handle by himself. Accordingly, the year after he commenced this venture he took his brother into the business.

Mr. Guy H. Long was born in 1881 and after a preliminary education, attended the Canada Business College, from which he graduated at the age of fifteen. Shortly afterwards he obtained a situation as a junior in the office of a Hamilton lumber company. After receiving a grounding in business methods with this company he sought to extend his activities and entered the wholesale grocery business. When seventeen years of age he was sent out upon the road. During this work he saw much of the lumber industry of Ontario. His ground was the northern division and the majority of his larger customers were lumbermen. During the early part of 1905 Mr. Long abandoned the road, when the Long Lumber Company was formed, and he has been connected with this company from that time until the present.

The Long Lumber Company has no outside capital invested in it. The success which it has had is due entirely to the energy of the partners and to the confidence which they have been able to instill in their customers. The company is interested in four other lumber companies and its members are directors of two other companies. The Long Lumber Company deal almost entirely in pine and hemlock. They handle the output of several mills and also manufacture each year a large quantity of lumber from logs picked up by their agents. They have two representatives covering the northern ground, buying and shipping, and two salesmen on the road. They make a specialty of southern yellow pine and British Columbia cedar shingles. Not the least important factor in their continued success has been the fact that they make a rule of taking cash terms on everything, and they have become noted also for giving everybody with whom they have business, a square deal. As one would natur-

ally suppose, two young men with such a record, are members of the Concatenated Order of Hoo-Hoo.

In addition to their business successes the Long brothers are well known among sporting circles. Mr. M. S. M. Long takes an active interest in horses and dogs. He is secretary-treasurer of the Hamilton Driving Club and vice-president of the Hamilton Tigers Football Club. Mr. Guy H. Long is manager of the Hamilton basketball team which for several years past has occupied the proud position of champions of Canada. He is also manager of the Tigers Second Football Team. In addition to this he takes quite an active interest in rowing and bowling.

Why Manufacturers Want Their Lumber Free

The desire of the Canadian manufacturers for free lumber for their own use and a duty on other lumber has prompted the following interesting letter to the Winnipeg "Free Press":

Sir,—I have been looking for a reply to a late editorial in your paper regarding the attitude of the Manufacturers' Association toward the duty on lumber entering Canada. None seems forthcoming, so, like the gentleman of Walt Mason's picture, the writer "would like to make a few remarks." Because the Manufacturers' Association want "free" lumber for what they require for use in their own factories and support the British Columbia lumbermen's contention for a "duty" against United States lumber, is not the piece of selfishness it is made to appear. The lumber required for use in these factories is chiefly special hardwood, such as oak, mahogany, chestnut, etc., not sufficiently produced in Canada. The higher the duty on these, just so much more will we have to pay for pianos, fine furniture and high grade house trim. Because it is lumber required for building purposes the case of the British Columbia lumbermen is altogether a different affair. In spite of the increased population and consequent demand for lumber the building of sawmills to manufacture has increased in a much greater ratio. They have multiplied on the coast and in the mountains, in the northern spruce districts, and in the territory east to Port Arthur, till their capacity is such that ten million people could be supplied where there are not over one and a half million. Where is the need of United States lumber in these circumstances? There will always be those ready to shout "remember the lumber combine" and hark back to the day when the facilities to supply the prairies with lumber were just the reverse of what they are to-day. In the old days lumbermen were no better and no worse than other business men similarly circumstanced, not even excepting the Grain Growers Grain Company, if ever they get a "downhill pull" on the wheat situation.

It sounds natural for cement companies to "cement" and form "mergers," but with such a multiplicity of big, medium and small sawmills, a merger is an impossibility and is never thought practicable. Unanimity among lumbermen association units has never prevailed, much less will there be with the whole group, each jealously guarding its "sphere of influence." As already noted, with mill capacity enough to choke up the market in a few months where, nowadays, is the need of United States competition? Figure how long ten heavily stocked general merchants would survive on the demands of one hundred and fifty people. Brother Jonathan keeps his bars in good repair against our building lumber, but is allowed to make a convenience of us when he has occasion to dispose of his surplus. The wages paid in the millions of feet of Washington manufactured lumber shipped into Canada would be an all-round benefit to us, besides, barring their product would help to take the surplus we are so easily producing. The Dominion Government is aware that western lumber manufacturers have a handicap in superfluous competition. Will they continue to allow one of the most important industries of the country to labor under such? Has political expediency more weight with them than political economy? On his manufacturing operations the lumber manufacturer has been losing money for years. Must he continue to do so when the situation could be corrected?

Thomas Gibson,
Representative of the Pacific Coast Lumber Mills.

Chappell Bros. & Company, Limited, of Sydney, C.B., have recently installed a fire pump at their sawmills; have added a three-storey warehouse 24 x 40 feet to their factory, and a two-storey warehouse of the same size to their branch at Glace Bay. They report that the market for lumber is strong and the demand fair, while the supply of lumber is generally low. The strike at the collieries, they state, affected the summer trade very much, but conditions are now better and are gradually improving. Regarding the price of manufactured woodwork the company claim that prices at present are too low on many lines as a result of cutting of prices and lack of co-operation among the manufacturers.

The barge J. J. Barlum has arrived at Sarnia with over one million five hundred thousand feet of white pine lumber consigned to the R. Laidlaw Lumber Company. This is the largest cargo of lumber ever received at Sarnia, and one of the largest to come down the Great Lakes. Capt. W. A. Glass, of Sarnia, who sails the "Barlum," states the load contains the greatest amount of feet ever recorded locking through either the Canadian or United States locks at the "Soo."

Montreal Export Season Closing

**Shipments Expected to Show a Decided
Falling-off—A Brighter Tone to the Market**

Montreal Office of the "Canada Lumberman."
October 28th, 1909.

Comparatively little change has been noted in the market conditions prevailing in Montreal during the past two weeks. Another three weeks will see the winding up of the export shipments and, on the whole, the season has been a disappointment. It is predicted that when the official figures are issued in December, the report will show a decided falling off, as compared with the previous year's trade.

The demand for laths is exceptionally good just now and several manufacturers are holding their stocks at a firm figure in anticipation of an early advance. The output of laths at the various mills during the past season is not in excess of last year's manufacturing, and it is only reasonable to expect better prices in consequence of the extensive building operations.

Shingles are quiet in sympathy with the Boston markets. The advance of 20 cents on the shingle tariff practically places Canadian dealers out of the running for a share of the American shingle trade.

Oak has again advanced in keeping with the continued large demand, and is now quoted at from \$87 to \$90. Some dealers do not hesitate to predict that this highly sought article will reach the \$100 mark during the next year.

The improvement in the American market for yellow pine is hailed with delight in local circles. American railway companies are at present buying largely for their own use in car repairing, and car builders are also in the market. The low cost of production and the greater facilities for marketing yellow pine have always made it a contender with Canadian pines, and this firm feeling in the southern market will undoubtedly strengthen the Canadian market.

The spruce market is also showing a brighter tone and dealers report numerous enquiries for the various lines.

Following are revised current wholesale lumber prices for Montreal:

1-in., 2-in. and 3-in. pine log run mill culls out	\$27.00 to \$30.00
1-in., 2-in. and 3-in. pine log run dead culls out	24.00 to 26.00
Pine "O" culls	13.00 to 14.00
Pine mill culls	17.00 to 19.00
Spruce flooring, sheeting, etc., No. 1	24.00 to 26.00
Spruce flooring, sheeting, etc., No. 2	19.00 to 21.00
Merchantable, spruce boards	16.50 to 17.50
2-inch merchantable spruce	16.00 to 17.50
Cull spruce boards	14.00 to 15.00
2-inch spruce culls	14.00 to 15.00
1½-inch spruce mill culls	15.00 to 16.00
Spruce scantling, 2x 3, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 3x 3, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 3x 4, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 2x10, 12 and 16 feet	19.00 to 21.50
2-inch (scant.) x 9, fifth quality, N. Y. "outs"	16.50 to 18.00
Oak, 1sts and 2nds, quarter white	87.00 to 90.00
Chestnut, 1sts and 2nds, 1 inch	50.00 to 52.00
Birch, 1-inch log run, mill culls out	18.00 to 20.00
Maple, 1-inch log run, mill culls out	18.00 to 20.00
Basswood log run, mill culls out, 1x4 and up, winter sawn	24.00 to 26.00
Basswood log run, dead culls out, 1x4 and up, winter sawn	20.00 to 24.00
Laths, mill run, spruce, 1½-inch x ¾-inch, 4 feet	3.00 to 3.25
Laths, pine, No. 1	4.00 to 4.25
Laths, pine, No. 2	3.25 to 3.50
Laths, pine, No. 3	2.50 to 2.75
Shingles, clear	2.90
Shingles, 2nd clear	2.25
Shingles, extras, 1's	1.50
Hemlock boards, mill run	14.50 to 16.50
Hemlock culls	13.00 to 14.00

Pulp Scarce and Demand is Strong

An optimistic feeling rules in local pulp circles and the conditions of trade just now are regarded as highly satisfactory. The market at present is very bare of stocks. The low water conditions which have prevailed in the United States throughout the past summer have not been materially relieved by the rains which were expected to fall during the autumn. The Connecticut, Hudson, Black and Oswego rivers, all paper making streams, have ground practically no mechanical pulp for a month past, and supplies of this article have, therefore, to be imported from the Canadian mills. This condition has created a very good price, and the prospects are for a still higher ruling figure. The lack of rain in the paper making centres of New York and the Eastern States will reduce very largely the usual fall production, and it is predicted that ground wood pulp will continue scarce until the spring rains set in.

As news print is composed of 75 per cent. of ground wood and a large quantity is used in nearly all the other papers, a strong market is bound to follow. The shortage of ground wood will help the sale of chemical wood, since more will be used when ground wood is not so readily obtainable.

Chemical pulp is in greater demand with return of better business

conditions, and a very much larger trade is anticipated from the first of November forward. A considerable quantity is moving to the United States.

A better feeling is apparent in the market and mills are not willing to sell at a low figure for future deliveries.

The following are present quotations: Ground wood pulp at mills, \$20 to \$21; sulphide, delivered in Canada, \$38 to \$42; sulphide, for shipment to the United States, \$42 to \$44.

Government Sale of Quebec Timber Lands

The Provincial Government of Quebec have disposed of the right to cut timber on 508 square miles of public lands along the line of the National Transcontinental Railway. The awards were made in each case to the highest bidders. The tenderers must manufacture in Canada all timber cut on the lands.

The lands in question consist of 32 lots, of from about 11 to 26 miles each, 15 being just east of the boundary line between Ontario and Quebec, and 17 just west of Weymontachingue. East of the boundary line, lot No. 2, consisting of 16 miles, was awarded to T. J. McManus. Lots 1, 2, and 7, west of Weymontachingue, consisting of 45 miles, went to Thomas D. Malone, of Three Rivers. Outside of these above-mentioned four lots, all the balance, 28 in all, went to McDonald & O'Brien.

All the lots are subject to an annual ground rent of \$5 per square mile and offers were asked from the tenderers as to the excess they would pay (1st) per thousand feet board measure in addition to \$3 for spruce, balsam, cedar, white birch and poplar saw logs, and in addition to \$5 for pine saw logs; (2) per cubic foot in addition to 5 cents for square and waney timber, and (3) per railway tie in excess of 5 cents. Mr. McManus for his lots pays an excess of \$2 over the above for spruce, \$3 for pine, 2 cents extra per foot waney and 5 cents additional on ties.

Mr. Malone pays excesses of \$3, \$1, five cents and five cents respectively. The price paid by McDonald & O'Brien is an excess respectively of 60 cents, \$2 in some instances, and \$1 in others for class 2, and five cents and six cents respectively of an excess in classes 3 and 4.

Personal and Business Notes from Quebec Province

Mr. E. H. Lemay is on a business trip to New York.

Mr. Williamson, of the Laurentian Lumber Company, is at present on a short trip through the Ottawa district.

Mr. W. G. Mason, of Messrs. Mason, Gordon & Company, returned recently from a pleasure trip through the Larder Lake district.

Mr. H. M. Price, of Quebec, one of the most prominent lumber merchants of that city, has been elected a director of the Lake Superior Corporation at Sault Ste. Marie, Ont.

Mr. Scott, of the Argenteuil Lumber Company, reports that the company's mills at Morin Flats, P.Q., are at present operating to full capacity, and will continue to cut until the ice forces the cessation of operations.

The members of the Quebec Provincial Government were waited on recently by a large deputation of lumber operators, including Senator Edwards, Mr. J. R. Booth, Hon. Geo. Bryson, Messrs. Egan, Wm. Price, W. Power, Col. B. A. Scott, S. P. Grogan, Gerald Power and McLean. The deputation asked that when deciding upon the proposed increase in stumpage dues in the province the Government would also take fully into consideration the condition of the lumber industry and general business. Consideration of the request was promised.

A good demand for lumber, particularly for the upper end, and an excellent demand for lath and shingles is reported by the Cascapedia Manufacturing and Trading Company, of New Richmond, Que. They also report that the demand for ties is much better. Stocks of spruce are much below normal and there is not nearly the usual quantity to winter over. The demand in the United Kingdom has been good and has stimulated shipments. The same applies to stocks cut for the United States. The prospects are good for a strong demand and higher prices next spring. The company report also that the men are now nearly all in the woods and the usual quantity of timber will be cut if conditions are favorable. Plenty of men are available in that locality.

Mr. E. E. Guay, of the Guay Lumber Company, Whitehall, N.Y., has bought a site at Montreal and opened a retail lumber yard. The new enterprise has just got into smooth running order and promises to be a success. Mr. L. A. Guay, who is a son of Mr. E. E. Guay, is in active charge of the retail yard. His experience with his father in Whitehall and later in Biston gives Mr. Guay the right sort of ability to conduct a new venture of this sort, though he is only 23 years old. Mr. E. E. Guay still lives in Whitehall, N.Y., and will continue to operate a wholesale lumber business at that point under the style of the Guay Lumber Company. The retail branch in Montreal is expected to prove a valuable adjunct to the wholesale business. Mr. E. E. Guay expects to make fortnightly trips to Montreal to keep in touch with and help out his son at the retail end with his long and valuable experience.

THE WOODWORKER

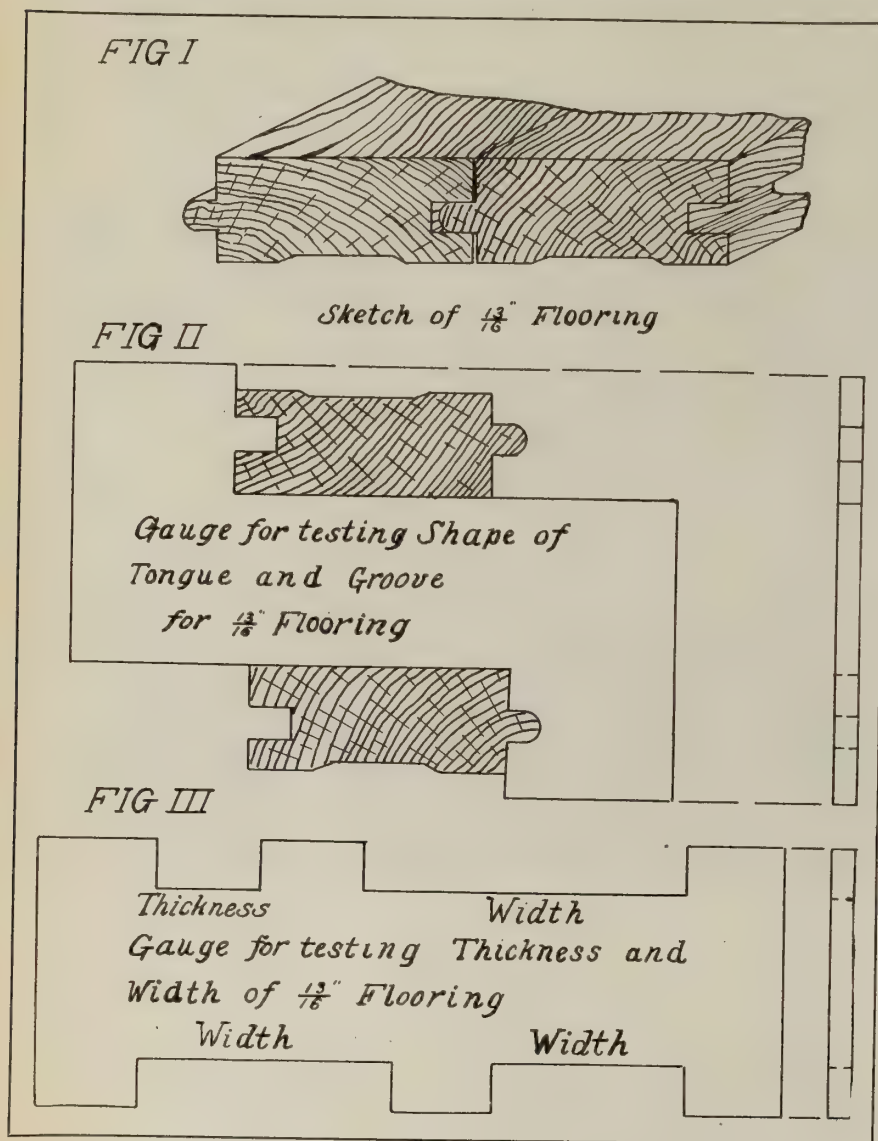

A Practical Method of Testing Flooring

BY N. J. MILLETTE.

Editor "Canada Lumberman":—

I have read a very interesting article in your issue of August 15th, 1909, in the section "The Machinery World," entitled "Planing Machines—Their Proper Care." The writer points out an important matter, which, in my opinion, is the burden of management. We know that trouble exists, and the best thing to do is to find what is to be done to better the situation.

There is only a small percentage of working men who realize the importance of accurate work; the value of the lumber that passes through their hands, and the loss made by improper workmanship in a planing mill. It would be a pleasure to handle help, if every man would use plain common sense and a little human judgment, which are so neces-

sary for the benefit of the stock. Unfortunately, a great number of men are working away carelessly, taking no means to learn the important points of the work. They are satisfied with what they do, no matter even if they know that their stock is a little inferior to what the other man has done. They do not care so long as they think that their work will be accepted.

To overcome this constant difficulty the best way I have found, is to establish standard sizes for the stock, and make steel gauges to test its shape, size, etc. Show the men how to use them and see that they use them properly. Make the man feel responsible for the stock if it does not fit the gauge. If the man is not able to set the machine right to do the work, it would be better for him to stop the operation than to spoil the lumber. If he fails to follow the instructions given, a few cents charged against him will do more good to develop his care, than a calling down (even if done by a professional).

As the article referred to, deals with a carload of defective flooring it may be of interest to illustrate a mode of testing flooring:

Fig. 1 represents pieces of flooring, as they would be made by the gauges illustrated.

Fig. 2 represents the gauges for testing the shapes of the side tongue, groove, etc.

Fig. 3 represents the gauge to test the thickness, and the various widths, corresponding to the sizes established.

In testing the stock as it passes through the machine, we can tell at a glance exactly where the setting is off, and in this way make it uniform. With reasonable skill in a short time the operator can get his stock; not next to perfection, but as perfect as his machine will allow him to do the work

Jointer Guards to Protect Woodworkers

In a letter to the "Woodworker," M. A. Johns deals as follows with the subject of Jointer Guards: Almost every issue of a mechanical magazine contains descriptions of one or more devices for protecting the wood-working machine operator; therefore, in order to follow suit, I will give here a very simple guard for one of the most dangerous machines the woodworker has to contend with—that is, the jointer or hand planer. Fig. 1 shows a top view of the machine with the guard in position and ready to receive the work; fig. 2 shows front of machine and arrangement of tension for holding guard always against the stock being worked; fig. 3, an end view of machine and guard, showing box which contains a weight of the necessary size to ensure a quick return of the guard to the guide of the machine after the stock has passed the head. Notice that

Details of Simple and Effective Jointer or Hand Planer Guard

this weight box is under the machine and occupying space that is otherwise lost.

The main piece J, in fig. 1, should be made of some good hardwood, with a small bolt through the small end to prevent splitting, also a piece of $\frac{1}{8} \times 1\frac{1}{2}$ or 2-inch wrought iron, screwed to wide end, which not only keeps this from being split, but also forms a good and lasting slide, for use when taking a piece back over machine to repeat the operation, thus making it more convenient than lifting the piece clear of machine when drawing back to joint another side; for as soon as the stock you are jointing passes the point L, fig. 1, the weight immediately causes the piece J to jump back against the guide, keeping the knives always covered, thus ensuring you against loss of fingers and liability of dropping a piece of work into the head.

The piece H should be made to exactly fit into the rabbet of the machine bed, and fastened by means of two machine bolts, A, with the heads let in flush at top and fitted with thumbnuts on bottom under machine bed—thumbnuts for this in order to avoid the necessity of looking up a wrench every time the guard has to be removed for rabbeting. When necessary to face off a wide board, all you have to do is lift off the piece J, as the square hole receiving F should be made a snug fit, but not tight enough to prevent its being lifted off easily. In order to strengthen H at the point where slot is cut to admit the round section of F, glue on block M with grain crossing that of H.

Fig. 5 will give a better idea of the upright piece F. The brackets D and E, figs. 2 and 3, are used in order to get the socket receiving the lower end of F above the floor, thus ensuring it against the chances of getting filled with shavings or sweepings. Fig. 6 shows plan of arm G, with a $\frac{1}{2}$ -inch hole in small end to receive an ordinary sash cord. This

cord B, fig. 3, runs over pulley C and into weight box K, carrying the necessary weight.

I have fitted up three machines with this guard; one has been on for nearly five years, one for two and one-half years, and one for about two years, and but once has a man been hurt on any of these machines since the guards were put on, and this once was when, for some reason or other, some one neglected to put the guard back after changing knives. Two factory inspectors have told me that this guard is the best they have seen, for the reasons that, first, being fastened from stationary end of machine, there is no danger of running it into the knives when adjusting for depth of cut; second, because of its simplicity and cheapness; third, because it is only the matter of a few seconds' time to remove the guard for changing knives and facing off wide boards. And, furthermore, it can be made to fit any machine of the jointer, hand-planer or universal varieties, and for extra wide machines an extension can be easily attached to the front of J, with hinges, and folded back upon it when using the guide near the front of machine. I am giving this to readers of the "Woodworker" in hopes that it will lessen the death knells of departing fingers, which I know it will do if given a trial.

Some Suggestions Regarding Saw Jointing

The general woodworking trade is finding that there is more to the subject of saw jointing than they have ever looked for heretofore. In the early days of woodworking it was not considered that what we term a joint could be made with a saw. Yet, to-day we are finding glue joints made with a saw, something we never even dreamed about in the early days of jointing woodwork by machinery.

Probably the first instance of the saw becoming prominent in doing what is termed jointing was in connection with parquetry flooring where it is used to rip the oak lumber into strips and made to do the job so well that the strips require no further jointing to fit them together in a parquetry floor. It is possible that the saw may have been used for jointing in connection with staves earlier than it attained prominence in jointing oak flooring, but the saw has really never yet attained any prominent place in stave jointing. It is used for jointing slack staves, it is used for straight listing, for rough jointing, and then again for re-jointing certain staves, especially those that are cross-grained or have knots or something on the edge making it difficult for the wheel jointer to do a smooth job on them. That is the circle saw. There is another kind of saw jointer made with a band saw that works differently and has cut quite a swath in the cooperage business here and there.

May Play Important Part

There is something of particular interest about the small circle saw, however, and it is possible that some time in the future it may play a more important part in jointing staves, both slack and tight barrel, than anybody has ever dreamed of. It is being used to joint staves for making colonial porch columns and large classic columns and it makes joints close enough for gluing purposes. To do this class of work, of course, the saw is kept in excellent shape, is set rather close, and the corners are jointed off perfectly even so there are no deep saw marks, and it produces a smooth, but not slick edge. And the little woolly effect of fibres on the face serve to make for some purposes, a more desirable joint than one where the edges are worked slick on a wheel jointer. That is why it may become particularly useful in the cooperage business.

The saw joint for slack barrel staves should be the ideal one, for two reasons. One is that it should make the barrel stand up better and the staves not slip so readily against each other, because it would furnish a smooth joint instead of a slick one. This is most important with the hardwoods. Also, for jointing these same woods where they are cross-grained or difficult to get a smooth square at one cut with a knife the saw should do its work well. It is used for re-jointing staves in some tight barrel plants where the wheel jointer leaves it rough, because of cross grain or something, and this same faculty that appeals here should make it valuable in jointing hardwood slack barrel staves. We are talking now, of course, purely of the value of the joint, regardless of the time and expense it might take to make it. There is not much doubt but what if saws are properly kept up and carefully operated joints can be made on either slack or tight barrel staves that are in many respects better than any joint made with a cutting knife either on a wheel jointer or on a planer-like machine. This being the case, the question is, to what extent may it be practical to adopt the saw jointing idea in cooperage work?

Chance to Extend Its Use

In tight barrel staves there is a chance to extend the use of the saw jointer considerably and it is used probably more than lots of people give it credit for, but there is not much data available as to the relative capacity or the cost of jointing on saws and jointing on wheel jointers and other well known types.

In the slack cooperage line the saw jointer is very seldom used and whether or not it will ever enter extensively probably depends on the practicability of devising machines or a mechanism by which the saw can be used for jointing and do the work in a satisfactory manner both from the point of properly utilizing timber and of cost of operation. Admittedly the slack barrel stave jointer as it stands is not up to the times. It

is particularly behind the times in being a man driven or foot power machine instead of being operated by mechanical power, and there is seemingly a good opening for some form of saw jointer to come along and cut quite a swath in this branch of the cooperage trade, provided some genius can devise the necessary machine or equipment to go with it by means of which saw jointing can be carried out in a business-like manner and done at a cost not to exceed that of the average slack stave jointer of to-day. That the sawmill can make the joints and make them well, there is no question. This fact is being demonstrated and pretty well admitted among machine woodworkers all over the country. So the only question is one of the feasibility of applying the idea in a practical manner to jointing staves.—Packages.

Cost of Hoop Making in Dull Times

In talking with a hoop manufacturer not long ago, the question of the increased expense of cost of manufacturing hoops during the dull season, or during the period such as we have had in the past year or eighteen months, he brought out the point that with two-thirds of the crew running full time, he could get four-fifths of his output obtained when running full time with the full crew. In explaining this proposition, he said:

"During a period of depression, such as we have had in the past year, when manufacturers have only enough to keep them busy a part of the time, there is no question but that the cost of manufacture of hoops or any other product is greatly increased from the fact that overhead charges and the general expenses are the same as when running to capacity. Of course, there can be nothing done to decrease these general and overhead charges, but I have found by a little experience that it is much better to run my hoop mill with two-thirds force and full time than to run the entire force part of the time. In fact, I have been able to get four-fifths of my regular production out of two-thirds of the force."

"The reason for this is that in cutting down the force in a mill to about two-thirds, I can weed out all or at least a large part of the incompetent help and keep only the best men. A man who is working at a hoop coiler, for instance, turning out a large amount of work every day, and another man alongside of him who is doing considerable less. I can keep the good man and let the other one go. Then the fact that we have let out a number of our force only stimulates those remaining to do their best work for fear that they will be the next to go. Of course, when times are good and we are running full force, with orders accumulating faster than we can take care of them, we cannot be particular about the class of labor that we put on. This only goes to show what can be done by carefully selecting the workmen, and thus by employing as near as possible the highest class of labor, the output can be increased more than the increase in expense for paying the better priced labor. I think that the results are more than satisfactory and that those who have been running their full force only part of the time have been losing considerably more than those who are following the plan as I have outlined."

It is not only possible, but probable, that in the near future builders and carpenters with woodworking machinery will have to take into consideration the effects of treated woods on machines, and build and plan accordingly. There is not only the treating of woods for preservative purposes, but treating for fireproofing and for various other purposes, and as this practice extends there will naturally be more treated wood which will require working. If some man can invent a treating process that will lengthen the time that knives will hold their edge in the ratio that creosote is supposed to lengthen the life of timber, it will be a blessing to the knife-grinder.

If you are running a plant where there are frequent changes necessary in order to do special jobs or change from one to another, and you have machines or appliances that make these changes slow and burdensome, the sooner you get new machines and appliances, the sooner you will make better profit out of the business. Likewise, if you have men who are tardy about making changes and do not enter into it with the right spirit, the sooner you inject a new spirit into them, or replace them with others who have the right spirit, the better.

Where men have to operate wide surfacers, a short man is at a disadvantage when he has to reach close to the guard when it is set at the back of the machine. The man is liable to slip on the hardwood floor and fall against the knives. This danger may be greatly reduced by using a piece of rubber matting in front of the machine. If the machine is very high and most of the men working it are of medium height, it is sometimes advantageous to build a low platform in front of it and cover the top of the platform with matting.

Is it practical to build and operate a fireproof woodworking factory? Buildings can be made fireproof, but to carry out the idea of safety would require a rule that all manufactured stock be cleared out of the factory at night and taken into the warehouse, so there would not be at any time enough wood or wooden products in the factory building itself to supply fuel for a damaging fire. Would it be practical to apply this idea to your woodworking institution?

Lumber News from Eastern Canada

American Capitalists Taking Extensive Interest in New Brunswick—Delay in Loading Steamers

That the American capitalists are becoming each year more familiar with the opportunities for profitable investment to be found in the Province of New Brunswick is evident from the timber tracts and mineral properties which have been acquired by United States investors of late. The latest transaction of this nature is at present being completed in Albert County. Mr. Isaac Prescott is disposing of his timber property and sawmill to the Eastern Canadian Lumber & Construction Company, Limited, recently incorporated in the State of New York, and composed of residents of New York City.

Mr. W. H. Malcolm, of New York, was in St. John recently arranging the details of the sale. It is understood that the sum to be paid for the property is in the vicinity of \$100,000. In addition to carrying on a lumber business, it is understood that the company propose to acquire the Albert Southern Railway and establish a large hardwood industry in the country. The railway, which runs from a short distance below Riverside to Alma, was built many years ago but has not been used for some time. The re-opening of the line should mean a considerable boom to that portion of the country.

The delay in loading steamers at British North America ports this season has directed the attention of steamship owners to the necessity of lay days being more definitely stipulated for in timber charters from Canadian ports, says the London "Shipping Gazette." The present form simply states that the vessel is to load as fast as she can, as customary, which is far too vague. In the past fair dispatch was obtained, and usually a minimum of 100 standards per day was loaded, whereas this season it has been more like 50 to 75 standards per day. This, coupled with the low rates of freight, has made the business unprofitable. It would be well, therefore, if, before next season opens, owners would put their heads together with a view to securing improved conditions. At Miramichi some owners have got into trouble over the draught of water, it not being safe to count on loading below 20 feet draught in order to cross the bar. Some of the places to which vessels are sent in the Miramichi river have barely a safe 16 feet. Many owners think that when they accept Miramichi loading it means one place of loading, whereas this season steamers have had to load at four and five places. To shift to several of these places means tug hire, which is very expensive, and runs up the disbursement bill to a very serious item.

Canadian Lumber Company's Plans

The Canadian Lumber Company, Limited, of Weymouth Bridge, N.S., will not rebuild their mill which was recently burned, as they have an up-to-date sawmill along with their pulp mill further up the river. This mill fills all their requirements. The company have recently increased the output at their pulp mill to 60 tons in 24 hours, and have installed two new pulp screens, two hydraulic presses and one wet machine. They report that they have had an exceptionally dry summer in that part of Nova Scotia, the average rainfall during the summer months being about $1\frac{1}{8}$ inches.

During the summer the company did a considerable amount of logging and expect during the fall to have a drive of three-quarters to one million feet, if the water will permit. The company report that the market seems to be firm, with a good demand for South African schedules with a large percentage of 12-inch. Hemlock 2x4 is selling exceptionally well for the United States market, as well as spruce inscantling and plank sawed to order. The Cuban market has been very dull throughout the season.

The company are contemplating installing an electric plant at their upper falls, where their upper pulp mill now stands. This mill is not now running, as they are utilizing the lower pulp mill entirely for the manufacture of pulp. The electric plant will be a water power scheme to run dynamos for supplying power to the lower mill as well as lighting the neighboring towns. The demand for pulp is improving and a good market is expected for the company's next year's production. In order to carry out these proposed developments the company will probably increase its capital stock.

A recent despatch from St. John, N.B., states that the tugboat Flushing is now on her way down river with 100 joints of logs, which form the last lot to be rafted from the Springhill booms this season. This raft is one of the two, the logs composing which came into the booms at the time of the third and last freshet. A few logs still remain in the boom, but these were left until next year.

This year's closing of the towing season is one of the earliest on record. In other years tugboats have been compelled to leave their rafts in the middle of the river to run down with the ice in the spring, and have been themselves compelled to put on their best power to reach home before they themselves were frozen in. In 1884 the ice closed in behind the last raft and became solid on November 24th, chasing the tug and tow so that they barely reached the South Bay booms in safety. The river had been frozen before that, but had thawed again.

This year's final raft started from the booms five weeks ahead of the last raft of 1908, which did not get under way until Nov. 20th at that. This year's rafted cut, although it fell over 10,000,000 feet short of calculations, exceeded last year's by 40,000,000 feet.

Decrease in St. John River Cut

It has been found that the lumber cut of the St. John river for 1909 is 10,000,000 short of the estimate made in all quarters and sustained as correct almost up to the present time. The lowest estimate made earlier placed the cut at 125,000,000, while 130,000,000 feet was predicted by many of the best informed.

Now that only two rafts remain to be brought down river from the St. John River Log Driving Corporation's booms, below Fredericton, the cut is seen to be much shorter. Up to September 20, when rafting was commenced again, after a wait for the Stetson drive, carried off at Big Rapids by the second freshet, the total amount rafted was 110,000,000 feet. The drive which came off with the freshet was smaller than expected, not amounting to more than 2,500,000 feet. Even including the bank logs, which are never counted in making the yearly estimate, the total cut on the river will not reach 120,000,000 feet. The bank logs of the year amounted to about 6,000,000 feet. These are bought by the lumber manufacturers, but do not come through the corporation booms, being cut on the farms above Springhill and rafted to that point by hand.

Exports from St. John to the United States in the quarter ending September 30, were valued at a million dollars, of which more than three-quarters was represented by lumber and pulp.

Opportunities in South Africa for Canadian Firms

Mr. S. R. Pousette, Canadian Trade Commissioner at Durban, South Africa, is making an effort to induce some of the best Canadian lumber exporting firms to take an interest in that market. One of the largest firms there, he states, has cabled an order for pine doors and if quotations can compete with the United States a steady intercourse should be established. An unfortunate prejudice against Canadian doors and lumber had its foundations some years ago in some shipments of very inferior quality. Importers have favoured United States goods for that reason. It is suggested that a practical way for Canadian exporters to keep in touch with the South African market is to supply the larger commission houses which have branches in South Africa with quotations. A very large business exists for lumber, ceiling and flooring boards, and pine doors. The principal houses are Messrs. C. Amsincke & Co., Arkell & Douglas, Peabody, and Crossman & Sielcken.

Australian Lumber Imports

For the year ending June 30, 1909, the imports of all descriptions into the port of Melbourne, Australia, amounted to 7,114,543,000 feet, the largest total since 1891. The imports of spruce show increased figures since for many purposes it is preferred to New Zealand white pine, its chief competitor. The consumption for 1908-9 is estimated to have been 98,858,000 feet. Stocks of timber held in Melbourne at the end of June totalled 65,368,000 feet, being the heaviest for the last seven years. Pacific pine, imported in logs from Manchuria and other points in the far east, shows an increase of 5,943,000 feet in comparison with the previous year, but against this there was a decrease in consumption of 514,000 feet.

The stocks of timber held in Melbourne for the year ending June 30, 1909, show an all around increase of some 16,000,000 feet as compared with the previous year. The stocks held in 1908 were 49,651,000, as against 65,368,000 feet in 1909. The particulars are: Red deals, 3,724,000 feet; flooring, etc., 14,087,000 feet; spruce and white deals, 4,666,000 feet; Oregon, 14,293,000 feet; sugar and yellow pine, 2,533,000 feet; redwood, 4,850,000 feet; American shelving, 280,000 feet; kauri, N.Z., 4,711,000 feet; N. Z. white pine, 9,438,000 feet; clear pine, 69,000 feet; Pacific pine logs, 6,717,000 feet; total, 65,368,000 feet.

A Large New Company in Northern Ontario

The Massey Lumber Company, Limited, of Pembroke, Ont., has been incorporated. It is composed of James F. Munro, J. G. Forgie, Richmond Frair, E. A. Dunlop and W. D. Russel. These gentlemen compose the directorate and the officers are James F. Munro, president; J. G. Forgie, vice-president; Richmond Frair, managing director, and James Coxford, secretary-treasurer. The company own 75 miles of pine limits on Aux Sable river, Algoma, Ont., purchased at the recent Government sale held in Toronto, September 15th. They will run three camps this winter, which will mean the employment of about 150 men, and expect to get out a quantity of board pine and logs. Men and horses are now being sent to the camps as rapidly as possible. Two carloads of heavy draught horses have been shipped for the camps and more are being purchased. As yet the location of the mill or mills has not been fixed upon. They may build, rent, or have their lumber sawed by the thousand, but the mill will be located on Georgian bay.

Lumber News of the Canadian West

Permanent Grading Inspection Staff for the Mountain Association — Pacific Freight Rate Reduction

The Mountain Lumber Manufacturers' Association will appoint a permanent grading inspection staff, the function of which will be to see that the standard grading rules of the association are carried out. The object of these rules is to make uniform the product of the different members of the organization. W. A. Anstie, Nelson, B.C., is secretary of the association.

Cranbrook is the metropolis of the timber industry of southeastern British Columbia. Throughout the district there are vast quantities of pine, fir and tamarac, assuring an unlimited supply for many years to come. There are between 25 and 30 sawmills in the district, some of them within a mile of the city limits.

Mr. A. D. McRae, head of the Fraser River Lumber Company, in his evidence before the British Columbia Timber & Forestry Commission stated that with the opening of the Panama Canal a large trade with New York and Europe will be available to British Columbia timber. His firm recently received a large order from New York, showing what will be possible when water transport is available.

Trans-Pacific freight lines have made a reduction of \$1 on lumber from Puget Sound to the Orient and of 5s. to Europe, dating from Oct. 15th. Offshore sail rates are quoted firmer. Lumber for Puget Sound or British Columbia to Sydney, 30s. @ 31s. 3d.; to Melbourne or Adelaide, 35s.; Port Pirie, 35s.; to Freemantle, 38s. 9d. @ 45s. 3d.; to Japan ports (steamers), 30s. @ 31s. 3d.; Callao, 38s. 9d. @ 40s.; direct nitrate ports, 38s. 9d.; Valparaiso for orders, 41s. 3d. @ 42s. 6d.; 2s. 6d. less to direct port; to South African ports, 52s. 6d.; to United Kingdom or Continent, 55s. @ 60s.; Guaymas, \$5; Santa Rosalia, \$6; Honolulu, \$5.

The death occurred recently at Portland, Ore., of A. F. Dudgeon, superintendent of the Yale-Columbia Lumber Company, Nelson, B.C., and of the Bowman Lumber Company, of Revelstoke and Comaplix.

The late Mr. Dudgeon was one of the most prominent lumbermen in Kootenay. He had been in ill health for some time and several weeks ago left for Portland to consult a specialist, who pronounced him to be suffering from acute kidney disease. The news of his death was received with deep regret by his many friends throughout Kootenay and numerous messages of condolence were sent to Mrs. Dudgeon and his son and daughter, who were with him at the time of his death. Mr. Dudgeon was born in Michigan 50 years ago and was a prominent Mason.

The Crown timber agent at Winnipeg in his annual report presents the following statement of lumber and other products of timber sold within the district, exclusive of imports from the United States:

	1907-08. Feet B.M.	1908-09. Feet B.M.
From Ontario, west of Lake Superior—		
From Canadian logs	58,000,000	51,000,000
From American logs	50,000,000	40,000,000
From British Columbia	92,000,000	100,000,000
From mills under Dominion license	53,485,361	61,694,391
From mills under Dominion permit	13,500,000	5,631,695

The selling price of the different classes of lumber during the year ended on March 31, 1908, with that for the year ended March 31, 1909, is given as follows:

	Per M. ft. B.M. 1907-08	Per M. ft. B.M. 1908-09
Pine, cedar and fir—		
Dimension lumber	\$18.00 to \$25.00	\$18.00 to \$25.00
Fir for interior finishing	40.00 to 20.00	40.00 to 50.00
Flooring, siding and ceiling ...	33.00 to 40.00	33.00 to 40.00
Shiplap and common boards ..	21.00 to 23.00	20.00 to 23.00
Spruce—		
Dimension lumber	18.00 to 25.00	18.00 to 20.00
Siding, flooring and ceiling	23.00 to 28.00	23.00 to 28.00
Shiplap and common boards	18.00 to 24.00	18.00 to 24.00
Lath	4.00 to 5.00	3.75 to 5.00
Shingles	3.00 to 3.65	2.70 to 3.00

It is more than probable that when the Board of Railway Commissioners hold their next session in British Columbia, some time this autumn, one of the important matters to come before them will be the failure of the C.P.R. to supply cars for shingle freight during the movement of the grain. Many of the smaller millmen state that their business is being ruined by the car shortage, just at a time when plenty of good business is obtainable. They believe that the C.P.R. is discriminating unfairly against them, so that they will be unable to get their products to market before the building season ends, when the orders will be cancelled. It is claimed that the small shippers, who want one or two cars at a time, cannot obtain them, and that the larger manufacturers who can use half a train of cars at a time, are given the first chance. A few concerns report that they have had no cars for a month and that they have lost their whole fall business.

Miscellaneous Lumber Trade News

R.- C. Haskin, Phillipsville, Ont., cheese box manufacturer, recently sustained a loss by fire.

The effort to get lumber down the Great Lakes late in the season has resulted in rates being raised. Buffalo shippers say they can not afford to meet the advance.

Davis & Ward have started up a new cedar lumber and shingle mill at Loughborough Inlet, B.C. They have 100 men at work and expect to have 200 men in the near future.

The mill of the J. W. Wells Lumber Company, of Menominee, Mich., was burned to the ground on October 16. The loss is estimated at \$50,000, and the insurance was \$25,000. It will be reconstructed immediately.

Demand for lumber boats on the Great Lakes is better than ever and it is predicted by Cleveland, Ohio, parties that \$3 will be paid for cargoes from even Georgian bay points before the close of the season. Already \$2.50 from Georgian bay has been paid in the last week, the highest rate this season.

At the yard of Graves, Manbert, George & Company, at Black Rock, N.Y., a new plan has been put in operation of cutting out certain of the lower grades of white pine without edging the boards, so that the most use can be made of them for cutting up into box or other material. In case of logs that are crooked or considerably larger at one end than the other the saving is large.

A Novel Tree Felling Machine

The accompanying illustration represents a new and novel gasoline motor tree felling machine, designed by the DeLoach Mill Manufacturing Company, Bridgeport, Ala.

It is unnecessary to lay stress upon the statement that a successful

DeLoach Tree Felling Machine.

machine which will fell the trees and cut off the sawlogs and shingle blocks, will prove quite an innovation, and will meet with hearty welcome from lumbermen.

The manufacturers of this machine claim that it is a success in every particular, and guarantee it to save the labor of two good men in the woods. They will ship it on trial to responsible parties.

The machine is equipped with a $2\frac{1}{4}$ high grade gasoline motor, speed 3,200 r.p.m., geared down so as to give 150 to 200 strokes per minute. The machine throughout is made of the best material, and all of the mountings are made of brass and steel forgings. The small gear is made of wrought steel, and the large one of semi-cast steel.

As will be seen by the illustration, the machine has vertical adjustment for cutting stumps of different heights, from 8-inch up to the full limit of 30 inches adjustment. The company claim that it is also adjustable to hillsides and uneven ground, quickly set, and quickly mounted or dismounted, the axle, being made eccentric, only needs shifting to knock down, or pushing to mount.

The truck wheels are wrought steel, 24-inch high. The first reduction of the speed is accomplished by a belt and a tightening pulley which affords freedom for starting the motor, and the power is applied gradually by tightening the belt. The weight of the machine complete is 400 pounds, and the price \$236.

Wood pulp, mechanically ground, imported into the United States from anywhere in Canada except Quebec and Ontario, is free of duty, until otherwise directed, according to a decision by the United States Treasury Department. If produced from pulpwood cut on private lands in Quebec and Ontario it is admissible free of duty, but if produced from pulpwood cut on Crown lands in either Quebec or Ontario, it is assessable at one-twelfth of one cent per pound, and in the case of Quebec there is added a countervailing duty of 25 cents per cord, as the equivalent of the export tax.

CAMP DEPARTMENT

Conservative Lumbering Methods

Lumbering is of two kinds—conservative and ordinary. The first seeks to so treat the forest that successive crops may be produced; the second takes no account of the future, but cuts only the better parts of the trees, often destroying young and promising trees in so doing. Lumbering in Canada and the northern United States is usually carried on at quite a distance from habitation. A camp is prepared at a spot convenient to the scene of the proposed logging operations. Here the men eat and sleep. Since most northern logging is done in the winter, these camps are made up mainly of transients; men whose home-keeping requires but a place to sleep and eat, with storage room for the trunk, bag, or box. The buildings in these camps are made for use, architectural features being unnecessary. The men, for the most part, are a hardy, healthy, good-natured set. Their winter life is a strenuous one, but is calculated to make for good feeling withal—provided the cook does his part. Early to bed, early to rise and active exercise in the open air of the crisp winter days creates an appetite which stands not upon the rules of polite society for its satisfaction. The preparation of a meal in many of these camps, owing to the army of men to be served, is a task of no small moment.

The building of a camp is preceded in many places by the making of a road. With the completion of the road and the camp, lumbering begins in earnest. The trees which are to be cut are marked, usually by chipping them with a hatchet at their bases. This is done by an official, after whom come the men whose duty it is to fell the trees. In conservative lumbering the trees are selected in such a way that their removal will not cause injury to the forest.

Winter the Best Time for Cutting

The best time of year for cutting trees is in the late fall and winter, for several reasons. First, trees cut in the spring or summer contain a large amount of sap or undigested food. This sap causes the wood to decay much more readily than it otherwise would. Second, the damage to the young trees will be much less in winter than in summer when their bark is green and tender. Felling the trees requires skill and experience. It must be made to fall as clear of the young growth as possible, yet in such a position that it can be readily cut up. A tree that is likely to be broken in its fall would better be let alone, for the expense of getting it down and to the mill will ordinarily be more than its lumber will be worth. Felling may be done either with the axe or the saw, usually with both. It is no uncommon sight to see clearings in which the trees have been cut off high above the ground. This high cutting is made, not, as one writer states, because the lower cuttings were harder to make, but because experience had shown the lumbermen that the wood near the base of the tree is not so desirable as that higher up. In California many of the big trees are cut as high as 10 feet above the ground. A series of holes are bored into the tree and planes are inserted into these upon which the chopper may stand. Conservative lumbering would cut the tree close to the ground. With the felling of the tree, the lower branches are chopped off and the crown is severed from the trunk, which is then sawed into convenient lengths for handling.

It is in the transportation of the logs that ingenuity asserts itself most. There are many ways, from the simple practice of attaching a chain to a log and pulling it with a horse, to the mechanical processes highly developed, of handling the great redwood logs of California. The first step in the log's transportation is known as skidding, and consists in collecting the logs in piles at some convenient place. These are called rollways, yards, or banking grounds. Horses and oxen may be used to drag the logs. Donkey engines with wire cables are quite common. Wire trolleys are not unusual. A donkey engine furnishes the power, the skidding and loading taking place at one operation. Logs are transported to the sawmills by sleds, by rail and by water. There are various ways of transporting by water. Among them are the alligators of the Canadian lakes, the giant rafts of the Pacific, the splash dam, river rafts, and flumes.

The Importance of Sleds and River Dams

Where sleds are used, ice roads are made, and the reader, no doubt, is familiar with the enormous size of the load that can be hauled, one of which was exhibited at the World's Fair at Chicago, pictures of which are scattered all over the country. Splash dams are used when a stream is too shallow to float the logs under ordinary conditions. A dam is built across the stream, water is collected above and the logs below it. When the gates of the dam are opened the flood of water carries the logs down the stream. On large streams the logs are bound together and floated as rafts, or they may be floated singly. When they are floated singly they are accompanied by men called river drivers, whose business it is to break up any jams which the logs may form. River drivers must walk upon the logs as they roll and float upon the water, and their work requires great skill and daring. To break a jam requires the presence of the men near the middle of the stream, usually, and when the key of

the jam has been removed thousands of logs go out with a rush. It is the river drivers' skill in leaping from log to log that saves him. Not infrequently his life goes out as a sacrifice, in spite of his skill. Flumes are long troughs built to carry a stream of water upon which the logs may float. They are most commonly used for transporting railroad ties and lumber.

In speaking of conservative lumbering and in comparing American methods of lumbering with those of Europe, Gifford Pinchot, Chief Forester of the United States Government, has the following to say: "In general, it is true that the present methods of lumbering are unnecessarily destructive and wasteful. This is not because lumbermen are more greedy for gain or less careful of public interest than other business men, for they are not. It happens partly because in this country compared with France and Germany, and other densely populated regions, there is so much timber in proportion to the population that it does not pay the lumberman to take anything more than the better parts of the trees he fells. The lumberman cannot do his work unless he does it at a profit, and he must do it, for lumber is indispensable. Consequently, although much of the waste in lumbering is not only unnecessary, but actually costly to the lumberman, for the present it is impossible to avoid waste altogether. It will be easier to do so when the methods and advantages of conservative lumbering, which is forestry, are better known to the American lumbermen, and are therefore in more general use. Although rough conservative methods have often been practiced in the past, the success of the lumbermen who made the trial was generally but partial, because their knowledge of the forestry was partial also. They were often deceived by under-estimates of the capacity for tree growth of the lands they were handling, because accurate measurements were lacking, and they seldom made full use of the productive power of the forest. More recent attempts, based on better knowledge, have been successful in almost every case."

A. Knechtel, inspector of Dominion Forest Reserves, and R. H. Campbell, Dominion Superintendent of Forestry, reached Winnipeg recently from the West. Mr. Knechtel has been in the West since April 1st on matters connected with his department. He has just returned from the Cypress hills, where the department is considering an addition to the existing forest reserve, which now covers half a township. Experimental work is being done on the reserve with a view to encouraging the growth of young trees and also in the direction of keeping the forests clean and so lessening the danger from fire.

During the summer Mr. Knechtel made a trip along the eastern slope of the Rockies from High river to the Crow's Nest Pass with saddle horses. A large amount of dead timber was found along the trails. This is a prolific source of forest fires and one which the department is studying with a view to taking preventive measures. Mr. Knechtel subsequently visited Lethbridge, and intends next to examine the Wood Mountain district south of Moose Jaw to see if the timbered area there can be made into a forest reserve.

A. J. Gregory, K.C., of Fredericton, N.B., and Hon. W. P. Jones, of Woodstock, N.B., counsel for the Canadian commissioners in the St. John river investigation, were in St. John recently consulting A. P. Barnhill and John Keefe, the commissioners, in regard to sending an engineer to make a survey and take levels of Chamberlain Lake. The Americans have also been asked to send an engineer for the same purpose. The Canadian contention is that Chamberlain Lake is a tributary of the St. John river, and that the Americans, by digging a canal, have diverted the waters to the Penobscot, thus violating the Ashburton treaty. Canadians also claim that the digging of the canal causes some 75,000,000 feet of lumber to go through that way instead of coming down the St. John river. F. W. Holt, C.E., has been decided upon by the commissioners, and he will leave shortly for Chamberlain lake. The next session of the commissioners will probably be held in Bangor shortly, when the reports from the engineers will be presented.

In his evidence before the British Columbia Timber & Forestry Commission, Mr. W. C. Gladwin, chief fire warden, on the basis of reports from the 38 wardens under him, stated that the fire loss this year for the whole province would be seven and a half million feet. There were 184 fires reported during this dry season, of which 62 were in the coast district. The chief causes were locomotives, donkey engines, settlers, campers and lightning. Out of 1,600 permits granted to settlers for setting out fires the wardens had to take care of two. At first the settlers had complained somewhat, but as soon as they learned to understand the system they saw it was in their own interests. The greatest care was taken by wardens to see that permits were only granted where there would be no danger. Mr. Gladwin favored the use of oil as railway fuel in the dry season, as spark arresters did not prevent the throwing of sparks in the sharp exhaust of an up-grade.

Dissolution Sale of Sawmill Property

The undersigned will offer for sale by Public Auction at O'Neil's Hotel, in the town of Powassan, in the District of Parry Sound, Ont., on TUESDAY, the 16th DAY OF NOVEMBER, 1909, at the hour of 2 o'clock p.m., the following valuable sawmill and farm property, viz.:-

No. 1—One sawmill, only a short time in use. Capacity in soft woods 35 M. feet per day, Engine and boiler, 110. h.p. This mill contains lath machinery and all the latest modern attachments, consisting of steam feed, live rollers, trimmers, etc.; blacksmith shop and tool-house; one frame stable, capacity eight teams; one sleeping house; one cook and dining house; one office. This property is situated on a switch of the G.T.R., two miles south of the said town of Powassan.

No. 2—One sawmill in good order. Capacity, 10 to 12 M. per day in soft woods. Offices and stables. Situate five miles from said switch, on a fine down-grade winter snow road, in the centre of a large quantity of hemlock, spruce, birch, elm, basswood and pine timber.

No. 3—500-acre farm, freehold, without encumbrance; about 75 acres cleared, under grass and hay. This land produces two tons of a continuous crop of timothy per acre. Balance is covered with hemlock, spruce, birch, basswood, ash, elm and maple. A good new brick house and frame barn.

No. 4—The Trumeth Timber Limit, 14 square miles, on which remains a large quantity of timber for milling purposes.

The mills are situated on leased ground, on which there is an option to continue the leases for a reasonable time.

Sufficient timber owned or in sight to supply the mills for eight to ten years yet.

Terms of Sale:—Ten per cent. of the purchase money to be paid day of sale; balance in 30 and 60 days, or a portion of the purchase may remain unpaid, bearing interest at 7 per cent. per annum, secured, as may suit the buyer.

The vendor reserves the right to one reserved bid. Offers will be accepted for the purchase of above property up to and including the 13th day of November, 1909, and further information will be supplied by any of the following persons, viz.: Alex. McBeath, Kippen P.O.; H. C. Monteith, Powassan, P.O.; Parry Sound District, the Head Office of the Company, or to S. T. Jackson, Ripley.

BRAY LUMBER COMPANY,
Powassan, Ont.

Timber Lands and Saw Mills for Sale

The UNDERSIGNED Offers:—

Parcel 1. Ste. Anne des Monts property situated on the South Shore of the St. Lawrence River, Gaspé County, Quebec, about 1000 acres of Seignior or Fee Simple lands—at the mouth of the Ste. Anne des Monts upon which is located a well equipped lumber and shingle Mill with ample steam power, electric lighting, with a capacity of 25,000 feet of Lumber and 125,000 to 150,000 pieces of Shingles each ten hours—also Dwellings for workmen, Stable, Store houses, Repair Shops and Mill Pond and storage facilities for logs.

About 300 square miles of licensed timber lands upon which disinterested Explorers make a minimum estimate of over 30 Million feet of saw logs, principally spruce, fir and cedar, and 595,000 cords of Spoolwood, and Pulpwood.

All on drivable streams an average of not over 30 miles to Mill Pond.

And all shanty plant tools and equipment on the property.

Parcel 2. What logs are now in the river estimated 3 Million feet board measure.

Parcel 3. Grande Vallee property situated about sixty miles east of Ste. Anne des Monts on the South Shore of the St. Lawrence River in the County of Gaspé, Quebec.

About 54 square miles of Seignior or Fee Simple lands and 100 square miles of Licensed lands.

A new Mill consisting of a steam feed Circular saws—Mershon Horizontal resaw—with all subsidiary Machinery and ample steam power and electric lighting.

Capacity 50,000 to 75,000 feet of Lumber each ten hours—A practically new Mill for sawing shingles and railway ties.

With ample steam power and electric lighting to produce 125,000 to 150,000 shingles each ten hours.

All the shanty plants, tools and equipment on the property.

On the timber lands, disinterested Explorers minimum reports are 100 Million feet saw logs, principally spruce, fir and cedar and two hundred and forty five thousand cords Pulp and Spool Wood.

For further particulars, address,
C. A. MILLINER,
Deseronto, Ont

**Planed Only on One Edge.**

In walking around through a half completed flat building the other day I noticed that, not only was much of the dimension of No. 2 grade, but that it was surfaced only on one edge and both sides left rough, and in this condition it was from $1\frac{1}{8}$ to $1\frac{3}{4}$ of an inch thick. I asked the contractor if he thought such lumber made a first-class building, and he at once asked, "Why not? This dimension averages thicker than that dressed on one side and one edge and consequently it is stronger. There is absolutely no sense to my mind in cutting lumber thick and then taking off from a quarter to a half an inch in dressing it down. The yard where I got this stuff has a planing mill and they have been shipping in a large amount of stock by portable mills up north. It is shipped here rough and much of it is extremely thin. The retailer who had it had almost despaired of getting rid of it when I asked him for a price on it. Of course, it was cheap; I simply had it sized on one edge, and if it doesn't make as good a building as any good lumber surfaced one side and edge to an inch and five-eighths thick. I don't know the first principles of what constitutes the strength of lumber.

"Did you notice the sheathing on this building?" he went on, leading me over to a point where I could see the ends of the boards. "You see how thick that is?" he asked. I measured it with my pocket rule and it was a strong $\frac{7}{8}$ -inch thick. "Did you ever get any boards surfaced on one side according to the rules that were that thick?" he asked. "They were rough when I saw them in the yard and I gave my direction to run them through the surfacer set to the thickness you see in the boards. It doesn't make any difference in the quality of the building if a few rough places are left where the planer skipped, and when these are covered over I have a better house than I would have with stuff surfaced down smooth to the regulation mill thickness." —Mississippi Valley Lumberman.

Unique Grade Locomotive.

There is at the very door of Vancouver a logging railway which is unique in that it runs down a mountain side where the grade in places is declared to be 18 per cent. This road is situated on the west side of the Capilano river. So steep is the grade of this road that a Shea geared locomotive which was secured to furnish motive power, was unable to hold the rails and within a very few days of its introduction on the work it raced down the mountain side and, jumping the tracks, scattered its remnants through the forest. When a geared locomotive could not operate on the grades the builders of the line were forced to fall back on what is probably the only logging engine of the kind on this coast. It is a wheeled platform adjusted to the grade and bearing a donkey engine and upright boiler. At the upper end of the line cables are securely anchored and these are passed around huge sheaves on the locomotive, which lowers itself and its load down the mountain and then winds itself up again.

More and more every year are the loggers being forced back from the coast line to secure their timber, and as a consequence the number of these steam logging roads will rapidly increase where there are extensive limits to be logged. There is now under construction in the Squamish valley a standard gauge railway which, while built to develop the rich agricultural resources of the Pemberton valley and the Lillooet, will be used in transporting billions of feet of fir from the Squamish and tributary valleys to tidewater.

The day of the big logger, the man with hundreds of thousands of dollars behind him, is here, and with his coming, the small man is gradually passing away, being forced out by conditions over which he has no control, but the hand logger and the man with the donkey engine have played a wonderful part in the development of the lumbering industry on the coast.

Newfoundland's Pulp Areas.

Sir Edward Morris considers the wood pulp industry of Newfoundland in its infancy. Sir Edward is credited with having cordially assisted Lord Northcliffe, the Albert Reed Company, and others in the establishment of their important undertakings on the island. Other concerns, he says, are seriously contemplating the acquisition of great pulpwood bearing areas. "You will get some idea," Sir Edward says, "of the gigantic possibilities of our pulpwood resources if you remember that Newfoundland is larger than Ireland, and the tenth largest island in the world. It is, in formation, an irregular triangle, with a population scattered along the fringe of the coast. Ten years ago there was not a human habitation five miles from the coast, and the almost im-

penetrable interior formed the home of the wolf, fox, bear, lynx and other wild animals. There are, undoubtedly, in remote parts of the island, pulp areas equal, if not superior, to any of the properties secured by existing companies.

Letterheads Printed from Steel

If you are thinking of improving your letterhead, and purchase in quantities of 5,000, I will submit a sketch that is artistic and with a business greeting arrangement. Address PENN DE BARTHE, 929 Chestnut St., Philadelphia, Pa., U. S. A.

Do You Want To Sell

second-hand machinery of any kind? Many a mill man or manufacturer has one or more machines for which he has no further use. They may be in good shape but for some reason or other they have been displaced.

Somebody Wants To Buy

just such machines. You can get in touch with that somebody by advertising in the "Wanted and For Sale" Department of the CANADA LUMBERMAN AND WOODWORKER. A trifling expense will do the trick.

Review of Current Trade Conditions

Ontario

The usual fall briskness is apparent at present in the lumber trade. The upper ends of white pine are in good demand and there seems to be a little better movement in red pine. There is more hemlock on the market now than it will consume, and apparently there is no upward movement in the price. It is, however, holding its own. B. C. shingles continue weak and are selling at low prices, stocks being very plentiful. Lath are fairly firm and the probability is that the price will advance a little before long. A decided improvement is noticed in the demand from the United States. The leading wood in that market is white pine. Speaking generally, the market is about steady with a good demand and an upward tendency of prices.

Ottawa reports indicate a decided improvement during the past fortnight, this being noticeable particularly in the activity of English buyers of deal. One of these buyers has closed a contract for the output of one of the largest mills in the Ottawa valley. The price obtained is a little higher than it was last year. English buyers are not taking any chances on waiting for lower prices, as they did last winter. There is a tendency among deal manufacturers to consider the sawing of their timber into 12-inch stock. All sorts of good lumber are now selling at high prices. Sidings and strips have made important advances. Good siding stock, 2x7, is selling at a minimum price of \$52, an advance of \$3 or \$4 per thousand. White pine pattern stock is in strong demand and No. 1 is nearly sold out. No. 2 also is active. Prices for No. 1 and No. 2 are a dollar higher than they were during the first week in October. All pine grades above shipping cull and better are selling at good prices. Box board also has improved slightly and stocks are diminishing. Mill and dead culls are plentiful and prices are about \$10, compared with \$12 last year. Box board is a dollar lower than it was this time last year. The better classes of pine, however, in most instances, are from \$1 to \$2 higher. During the last fortnight there has been a marked improvement in the demand for several lines which had been dull formerly.

Eastern Canada

Trade conditions have been rather quiet during the past fortnight. The "parcel trade" in "English" deal by the winter liners is showing signs of activity. The first sailings will be early in December, and probably the quantity shipped in this manner during the winter will be heavy. Large shippers who control much of the output of the country mills are inclined to prevent any loading up of spruce deals for winter delivery, so that it is probable that the stocks at St. John of "English" spruce will continue light. During October they were much lighter than in October, 1908. Merchantable spruce deals at St. John total about six and one-half million feet, and the price is about \$14.25 to \$14.50 per thousand feet, f.o.b. steamer, on the usual specification.

Dulness prevails in the export business at Boston and New York. Spruce lath, however, is quite active. "American" spruce deals are also quiet and somewhat depressed. Although spruce lath have been improving it appears as though further improvement could still be expected. St. John dealers and manufacturers are holding their stock fairly tight. Stocks at St. John amount to about five and one-half millions, and the price is \$3.05 to \$3.15 per thousand f.o.b. schooner St. John. At Montreal, conditions are practically unaltered compared with a fortnight ago. The export season which is almost closed has been quite a disappointment, the quantity shipped being considerably less than was expected. Laths are in good demand at present and manufacturers are holding for high figures. An advance in the near future would not be a surprise. Shingles are dull. Oak continues very strong, being quoted at \$87 to

\$90. Much satisfaction is felt with the improvement in the American market for yellow pine, which, it is believed, will have a good effect upon the Canadian market. Inquiries for spruce are fairly numerous. The pulp market is in a good condition on account of the increased demand from the United States.

At Boston the demand for spruce is rather quiet. Retailers, however, have been reducing stocks. The demand for random is limited, with small sizes selling at \$20.50 to \$21. There is very little life in the demand for matched spruce boards and prices are easy. The demand for spruce in New York is irregular. The amount of business in shingles at Boston has been small during the last fortnight. Canadian manufacturers are reported to be holding at firm prices, which, however, are said to be too high for business. The best cedar extras are quoted at \$3.65 to \$3.75, and clears at \$2.50 to \$2.60. There is a good demand for lath at firm prices. Sales of 1 $\frac{5}{8}$ -inch are reported at \$4.25. Dealers, however, are looking for better prices in the near future. The demand for 1 $\frac{1}{2}$ -inch is good and prices are firm at \$3.75 to \$3.90.

Western Canada

The steady demand for lumber from the prairie provinces has resulted in the stiffening of the price of logs in British Columbia, and particularly on the coast. Fir logs, good camp run, are selling at about \$8.50 to \$9 delivered to the mill, all charges paid, common run of cedar at about the same, and good cedar at from \$10 to \$13 per M., according to quality. Spruce is selling at \$9. Small lots of common or scrub logs are bringing prices considerably lower, but the quantity offering is small and grade very poor. The outlook is very good, the demand for lumber, both locally and for the rail trade, will be good all fall and winter, and it is expected that the spring demand will be very good. The price of logs will probably continue to go up for the next two months.

The lumber industry in the province is in a better condition than the shingle industry. Orders for lumber are fairly plentiful, but with so many mills in the cutting, there being 64 in the mountain district and 50 on the coast, the price is not as good as it ought to be, being from \$9 to \$11 for rough. In the shingle industry the production is ahead of the supply, with consequent lower price. Notwithstanding the increase in the United States on Canadian shingles some orders are coming in.

Car shortage is not a serious handicap to the mills at present. It is true that there has been a shortage of cars, but at present the C.P.R. seems to be able to fill any reasonable demands made upon it for cars. Undoubtedly shipments will continue good all fall.

Great Britain

The close of the season for the receipt of spruce cargoes finds buyers rather apathetic in regard to purchases. It is reported that a large carload from St. John, with the usual specifications, was sold recently in the Bristol Channel at a price in the neighborhood of £8, 2s. and 6d. At Churchill & Sim's last public sale 11-inch and prime unsorted Oregon sold at 1s. 2d. and Montreal birch at 1s. 3d. A lot of first broad Michigan pine sold at £41 5s. The price obtained for sawn birch and Oregon pine cannot be taken as a guide to values because many of the floats had been broken into. Offerings of flooring were very small and the prices obtained were high.

At Liverpool the price of spruce is firm. Trade generally, however, has been of a very hand-to-mouth character. The stocks reveal a noticeable scarcity of wagon lengths in 3x9 and 3x11, 14 and 16 feet. The season has been noticeable also for a shortage of 18-foot lengths. Birch planks are not plentiful on the Liverpool quay at present but the demand

SARNIA, ONTARIO

is rather dull. Prices are somewhat easier. The principal stocks are 3-inch and there is a small amount of 2-inch and 4-inch, but little 2½-inch and no 5-inch. The demand for birch logs is declining but prices are firm. There is a considerably better feeling for Quebec pine deal, although the demand is only moderate and stocks are heavy. Quebec reds are feeling the benefit of the scarcity of Archangel and Baltic reds.

At Manchester the demand for timber is showing a tendency to weaken, the result, it is said, of the higher price of money. This is noticeable in the inquiries for spruce. It is expected, however, that the demand for this wood will soon increase. Floorings are firm at £10 10s. basis c.i.f. for unsorted boards. There is quite an activity in the import of timber at Tyne; noticeable among the arrivals being a number of Canadian shipments. At Southampton the timber trade is steady. Arrivals are scarce but stocks seem to be sufficient for all demands.

At Glasgow arrivals of spruce continue fairly heavy and prices are firm. The few shipments due to arrive before the close of the season are holding for increased rates.

United States

Satisfactory conditions are reported from nearly all the large markets. The car shortage, which has become intense, is a strong factor towards greater activity. Orders for car material are numerous and railways also are buying timbers and ties quite extensively. The good demand for fir taken from the Pacific coast has done away with any fear in regard to over-production. The mills, on an average, seem to have about two months' orders booked ahead, and reports indicate that even yard stocks are well sold ahead and waiting for cars. Manufacturers of northern woods and yellow pine report that the competition of Pacific coast fir is becoming a very important factor in their business. There is a fair demand for white pine yard stocks. Shop and pattern lumber are selling well. A slight improvement is noted in the prices for No. 3 and No. 4 red pine, and the indications are that the lowest grade may shortly bring a reasonable figure. The general impression is that the market is evening up, as box factories are buying and other users of low grade pine are in the market.

Normal activity prevails at Chicago in the market for northern pine. The quantity of stock in movement is considerable. At Buffalo, white pine is extremely strong in the good grades and dealers are holding on with a view to getting much better prices. Many of the yards, however, are loading up with rather poor stock, which is selling unsatisfactorily. Even these grades, however, are better than they were a short time ago. There is a small improvement noticeable in the demand for fir lumber at Chicago, although heavy timbers are a trifle sluggish. Fir yard stock is moving better than for some time. The demand for spruce is still maintained.

A marked recession has occurred in the Chicago business in southern pine, which is more noticeable in the yard stock items than in car material and timbers. Stronger conditions are looked for, however, in the near future. Red cedar shingles are still quiet at Chicago, in all grades. The city yards and those in the country are doing very little buying. The demand for white cedars is unchanged but prices are firm. Lath are in steady demand and prices are strong. At Buffalo, the demand for shingles has lessened a trifle but the trade is still good. Cooperage conditions are still rather dull at Chicago, as the market is still waiting for hog receipts. Some of the heading mills have contracts for 30 or 60 days. Flour staves are steady, also basswood flour and sugar heading. No. 2 staves are selling with difficulty, as large quantities are still unsold at the close of the apple season.

The demand for hardwoods is steadily improving, the most noticeable feature being the great demand for plain sawed red oak. Plain sawed white oak is also very popular. At Chicago there is a good demand for the upper grades of birch and prices are very firm. Maple also is much stronger in the upper grades. At Minneapolis there is a steady demand for hardwoods. Sash and door firms are stocking up in advance on many items. The best demand is for birch, which is selling at high prices. Oak and basswood are also very firm. Hemlock is selling well at good prices at nearly all the markets, although at Buffalo a striking falling off is noted.

Lumber Production of Calgary District

The Crown timber agent at Calgary in his report states that the quantity of timber manufactured from licensed berths in his district during the twelve months, amounted to 13,730,588 feet B.M., quantity sold 11,211,737 feet B.M.; manufactured by portable mills under permits, 7,210,191 feet B.M.; quantity sold, 5,476,799 feet; total quantity on hand, 13,611,610 feet. In addition to the 20,940,779 feet board measure manufactured there was probably about 100,000,000 feet brought into the province from British Columbia, but apparently nothing was imported from the United States.

The log crop amounted to 20,000,000 feet, which in addition to the 13,000,000 feet left over from 1907 and 1908, made 33,000,000 feet to be manufactured into lumber during this season. The average price at which the lumber sold throughout this district, during the year, was \$14.91 per thousand feet.

Market Correspondence

Ottawa Valley News—Improvement is General

Ottawa, October 27.—The tone of the lumber market has improved in the last fortnight. The best evidence of this is the activity of the English buyers of deal, who have already closed a contract for the cut of one of the largest mills in the Ottawa valley. It is understood that the price is a shade better than last year. Local lumbermen are encouraged as to conditions in the British market by the fact that the buyers are not taking the chance of waiting, as they did last season. Some of the deal manufacturers believe that they could make more money out of their timber by sawing it into 12-inch stock, even if the market for the English stock does improve slightly. The logs large enough for producing 12-inch lumber are being used up so fast that the deal buyers may have to pay much higher for the thick lumber in another year or so.

Other signs of an improving market are found in the higher quotations for better lumber. In fact, all sorts of good lumber are now up to the best prices of the past. There have been some marked advances this month in sidings and strips. The good siding stock, 2-inch by 7-inch, went up \$3 or \$4 per thousand, and none has been selling at less than \$52 per thousand. There was a strong demand for white pine of the barn variety, and No. 1 stock is nearly all sold out. No. 2 is active also, both being a dollar higher than early in the month. In fact, all the pine grades above shipping cull and better are well taken care of at good prices. Box board is not so dull as early in the season, and the outlook is that the large stock on hand will be reduced to ordinary proportions before the season is over.

Mill and dead culls have the largest surplus in proportion to requirements and the stock is selling at a reduction from last season's prices. Some of the dead culls are selling as low as \$10 per thousand, as compared with \$12, the minimum a year ago. Box board is a dollar lower than a year ago also, but many of the upper classes of pine are one or two dollars a thousand higher, showing the growing demand for the better sorts of lumber. The last fortnight, however, has witnessed an improvement even in the duller branches of the trade. "It would be only some startling political event affecting the money market," said one manufacturer, "that could injure the prospects for an active season's business in lumber."

Reports of fever in lumber camps have caused a lot of anxiety to manufacturers and some hands have left camps on Jocko river, fearing attacks of black fever, which is said to be threatening. Investigations by lumbermen failed to show there was much real danger. The Pembroke Lumber Company, which operates on Jocko river, found there were no cases in its camps. The Shepard & Morse Lumber Company, though no fears were felt about its limits, had a sample of water tested at the Ottawa Experimental Farm from a well on the Montreal river limits and the report was of the most assuring kind that there was no typhoid germ in that source of drinking water. Typhoid is prevalent at the Cobalt mining camps and lumbermen have come to the conclusion that any germs reaching the lumber regions were carried by flies. The fact that the sickness has died out gradually since the advent of the cold weather is a confirmation of this belief.

M. J. O'Brien, lumberman and contractor of Renfrew, who recently purchased 28 timber berths, auctioned by the Quebec Government, will erect mills on them for the manufacture of ties which he will use in railway building. McDonald & O'Brien, of which Mr. O'Brien is a partner, have a big contract for railway building near the limits, and the ties will be convenient. Mr. O'Brien secured 28 of the 32 limits offered, the total sum realized from the sale being about \$400,000.

The Massey Lumber Company, with headquarters at Pembroke, are putting in 150 men to take out pine logs on 75 miles of pine limits recently purchased in Algoma at the Government sale. The property is on the Aux Sable river.

The W. C. Edwards Company are this year sending up fewer men to the shanties than formerly. "Lumbering has been an unremunerative business for the last few years and on this account we have been obliged to call a halt and send fewer men to the timber camps," said Senator Edwards to the "Canada Lumbermen." Some of the other lumber companies, however, are sending about the usual number of men to the woods.

That the Kippewa dam contract in connection with the storage of Ottawa river waters will soon be awarded seems to be indicated in the report of the Department of Public Works just issued. This is gratifying to Ottawa valley lumbermen, who have been complaining of the slow progress on the dam at Lake Temiskaming. The Public Works report says that the three upper Ottawa basins, Lake Kippewa, Quinze and Expansé lakes and Lake Temiskaming, with a total area of 300 square miles, are capable of storing approximately a layer of 15 feet deep over an area of 300 square miles, or 4,500 square miles one foot deep. This will furnish a flow of nearly 10,000 cubic feet per second during the low water period, when the flow at Ottawa is only 10,000 to 12,000 cubic feet

Lumber and Sawmill Insurance

By using the facilities of this office the COST of insurance on your LUMBER and MILL property will be MATERIALLY REDUCED without impairing the quality of your present indemnity. A SUBSTANTIAL SAVING is possible because our experience as SPECIALISTS has taught us to direct the property owner's efforts for PHYSICAL BETTERMENT of his property into the channels which will result in RATE REDUCTIONS. We have also eliminated many forms of expense, thereby SAVING to our policy holders unnecessary drains on our premium income.

If you are interested **Write Us**, and you will find that we are interested in you.

per second, or in other words, the 150 days' short flow of water would be doubled. The storage of the Upper Ottawa means the control by sluices of the various lakes so that the overflow waters of the spring will be retained and stored until autumn, when they can be used to augment the very meagre flow from the month of October to the month of March.

The manufacture of pulp has been far greater in the Ottawa valley this season than was anticipated, chiefly on account of the great supply of water power. The James MacLaren Company, of Buckingham, Que., consumed so much pulpwood in their mills that they have been obliged to bring an extra drive of 100,000 pieces from Iroquois lake up the Lievre river. The flow of water has been favorable for the drive and the Eddy Company and J. R. Booth have very little trouble.

Since the new tariff of the United States went into effect J. R. Booth has been enjoying a lower rate of customs for large shipments of paper across the boarder. The minimum United States tariff on paper is \$3.75 per ton, compared with \$6 formerly, and Mr. Booth derives the full benefit of the change. There would be an additional \$2 levied on Mr. Booth's export of paper if he manufactured from spruce cut on the Booth's export of paper if he manufactured from spruce cut on the latter province on account of the 25 cents per cord discrimination against shipping unmanufactured pulpwood out of Quebec. The pulpwood used now in Mr. Booth's large plants is bought from settlers, hence his opportunity of exporting under the lower rate.

New Brunswick News—Parcel Trade May be Light

St. John, N.B., October 25.—The fortnight has been marked by little of an unexpected nature, although several very interesting phases have materialized in the local and provincial lumber trade and industry. One of the most interesting features is the preparations and indications for the "parcel" trade in "English" deal for shipment by the winter liners. Shipments of full cargoes of this line of goods from this port have ceased entirely, and the next shipments will be parcels by the liners, the first sailings of which are scheduled for early in December. Judging from present indications, there will be considerable quantities shipped from this port in this way before spring. Of course, local people will not put in the total volume of shipments, a large proportion coming by rail from portable mills and other plants situated at inland points. It is these outside goods which make it hard to gauge the volume of shipments and the supply. The weather is always an important factor in the output of country mills and, of course, the prevailing prices have an important bearing upon the anxiety of the mill owner to turn his raw material into deals and place it upon the market. Practically all of the product of these country mills is controlled by the dealers at the shipping centres, and it is right at this point that the policy of local firms is apparent. This policy seems to be similar to that followed last year, and its chief characteristic seems to be to avoid a loading up with spruce deals, the delivery of which is to be taken during the winter. This caution is one of the elements which will go a long way toward keeping within very close bounds the volume of deals sawn at country mills during the winter throughout the entire province. Local stocks of "English" spruce are considerably lighter than in October, 1908 although by no means what could truthfully be described as light. The total figures of merchantable spruce deals would be in the vicinity of six and one-half millions to seven millions of feet. The lowest quotation obtainable by an enquirer would be from \$14.25 to \$14.50 per thousand superficial feet, f.o.b. steamer St. John on the usual specification.

The trade in provincial lumber for export to Boston and New York has continued in a state of monotony and uncertainty through the summer and autumn, the exception to the rule being spruce lath, which line has supplied considerable activity and variety to the record of the past several months. The trade in "American" spruce deals has not been such as to give rise to any particular enthusiasm, although, perhaps, less depressed and less dangerous to market operators than the expressed ideas of some of the authorities would seem to indicate.

Spruce lath have been rather stronger during the past fortnight and it would seem as if the high-water mark had not yet been reached. Local dealers and manufacturers have decidedly optimistic ideas in regard to this line of goods and are in no hurry whatever to get rid of their present stock of lath or what they will manufacture during the next few months. While, no doubt, the high price of lath will start a number of country millowners into manufacturing lath from the round wood, the crop of this line of goods (owing to the risk and uncertainty of the manufacturing of round-wood lath) will not be so great as might be considered probable. Local stocks of spruce lath, computed from the newest figures obtainable, show that there are in the vicinity of five and one-half millions in stock in the local mills and wharves. An enquirer would be quoted on the dutiable article from \$3.05 to \$3.15 per thousand, f.o.b. schooner St. John.

General improvement in the cooperage business is reported by J. Innes, of the Sutherland, Innes Company, Chatham, Ont., who says "Business is certainly looking up. We made heavier sales during the month of September than any other month this year, both in No. 1 and No. 2 stock. Mill run apple barrel stock is a little slow in moving, but

during the last week things have picked up considerably and a great deal more stock is moving than expected. Prices for No. 1 stock are stiffening very considerably, and No. 2 stock is also showing an upward tendency. Mill run stock is still very low in price and it looks as though a lot of this stock would have to be sold instead of No. 2, as the No. 2 stock will soon be cleaned out and mill run will have to be taken as a substitute. Hoops are looking better and as the manufacture has almost stopped the accumulation will soon be disposed of. Heading is still low in price and it looks as though about the only thing that will be carried over into next year will be heading and probably some mill run staves. A great deal of trouble has been caused by the mill men, especially in the south, shipping a poor grade of mill run stock, and choice No. 2 northern staves are being shipped to a great extent instead of mill run southern staves. The manufacturers, as a whole, who produce stock of standard quality, are getting fair prices, but stock of a poor, unreliable grade, has to be sacrificed this year at prices which must have been serious loss to the manufacturers. The outlook for future business is good, especially in high-grade stock, as there is little left on hand and holders are able to demand fair prices for their goods."

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1431. Maple flooring—A Liverpool firm having a large demand for maple flooring is desirous of buying supplies from Canadian exporters.

1432. Lumber—A London firm wishes to be placed in communication with Canadian hardwood lumber exporters.

1433. Pine spars—An important public body in the United Kingdom makes inquiry for small experimental supplies from Canada of "Oregon pine" spars in the round, suitable for masts of fishing boats, the spars to be 45 feet to 50 feet in length and 14 inches to 16 inches across at the butt, with bark on. The spars must be whole, not tops, and free from knots.

1458. Cheese boxes—A South African firm of general agents asks for price lists, etc., from manufacturers of cheese boxes in shooks. Quotations to be c.i.f. Durban.

1499. Birch boards and scantlings—A Manchester firm asks for prices and dimensions of birch boards and scantlings from Canadian exporters.

1501. Ash logs and squares—A Manchester firm asks for prices and dimensions of ash logs and squares from Canadian exporters.

1515. Agent—A Yorkshire firm wishes to get into touch with an agent in Nova Scotia to push the sale of their tool steels, files, saws, edge tools, etc.

1537. Timber—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of timber. Quotations to be c.i.f. Delagoa Bay.

1538. Flooring and shelving—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of flooring and shelving. Quotations to be c.i.f. Delagoa Bay.

1539. Doors and windows—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of doors and windows. Quotations to be c.i.f. Delagoa Bay.

1559. Flooring and ceiling boards—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of flooring and ceiling boards. Quotations to be c.i.f. East London.

1560. Doors and windows—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of doors and windows. The doors must have four panels instead of two long ones and the panels must have play, to allow for the movement produced by a very dry atmosphere. Pins must not be driven into the panels. Quotations to be c.i.f. East London.

1563. Spruce lumber—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of spruce lumber. Quotations to be c.i.f. East London.

1579. Mining timber—A South African firm of furniture dealers desires to be placed in touch with Canadian shippers of mining timber. Quotations to be c.i.f. East London.

Lumber Mutual's Excellent Report

The Lumber Mutual Fire Insurance Company, of Boston, Mass., have issued their financial statement, for the year ending Sept. 30, 1909. A net cash surplus is shown of \$389,760.74. The total liabilities, including the net cash surplus, amount to \$579,499.03. The cash and contingent assets amount to \$1,577,042.14, which sum is available for payments of losses. The insurance in force amounts to \$13,889,544.05, the premiums on which are \$332,514.37. During 1909 the losses totalled \$43,275.07, and the dividends to policyholders amounted to \$85,177.26. The gain in the net cash surplus for 1909 was \$85,672.42. From 1895 to 1909 inclusive, the total of losses paid to policyholders was \$560,972.28, and the total of dividends paid to policyholders was \$480,523.87.

Peter Pline, an employee of the Tilson Stave Mills, at Woodstock, Ont., was killed and W. Armstrong seriously injured through the bursting of a large circular saw.

Employing lumbermen in the Fort William district say that indications are not wanting that there will be more timber and pulpwood cut in that section this winter than for several seasons past.

There is an unconfirmed report from Ogdensburg that owing to the changes in the tariff a number of capitalists of that place are about to start a pulp mill at Prescott, on the Canadian side of the river.

Parry Sound, Ont., will shortly have a box-barrel factory in operation, the president being Mr. Belfry. An old factory has been purchased and is being rapidly fitted up with machinery and other equipment.

Fire has destroyed the saw and grist mill, and cheese box factory of Reuben Haskins, of Phillipsville, near Brockville, Ont., with the whole of their contents, entailing a heavy loss, as the owner carried only a small insurance. The fire is supposed to have originated from the boiler.

A prominent Chicago newspaper company is looking over the Imperial Paper Mills' plant at Sturgeon Falls, with the possibility of purchasing it. It is also said that some Michigan paper men are also considering the purchase. This plant will probably be in operation again soon.

The Gage-Harrison sawmills at Burk's Falls have been destroyed by fire. Mr. J. Walter Gage, of Hamilton, Ont., is a partner in the company with Mr. Harrison, of Burlington, and the mill was doing a large business. The loss was placed at \$12,000 and the insurance amounted to only \$3,000.

An echo of the strike in the pulp and paper mills of Sweden was heard in Ottawa, Canada, last week, when an appeal was received from 86,000 workmen over there by the Canadian Federation of Labor for funds to carry on the wage war with the manufacturers. The request was not granted.

The St. Lawrence Paper Mills, Mille Roches, Ont., are erecting an addition, 185 feet by 80 feet, two storeys high, which will be used as a finishing room. Three 64-inch new supers are being installed as well as an electric elevator, while two railway sidings are being extended. The building is of stone with walls two feet thick.

A Fort Frances, Ont., despatch states that all of the grinders for the pulp mill will be installed on the United States side and the power will be exported from the Canadian side. No provision is being made for grinding pulp on the Canadian side of the river. The Board of Trade and town council may investigate the situation closely.

The Kent-Cooper mill, which has been erected on the site of the sawmill owned by Mr. D. G. Cooper, at Cellingwood, Ont., which was burned some time ago, has commenced operations. The mill is larger than its predecessor and is fitted with a circular saw and machinery especially adapted to the hardwood business. The company have a large stock of hemlock logs on hand and expect to cut about one and one-half million feet before the close of the season.

The production of box board is increasing in the Ottawa district. The St. Lawrence Pulp & Paper Company, which has been turning out five tons a day, will begin next week to run at night, doubling the production. The E. B. Eddy Company, which started the making of box board a few months ago, is turning out two tons a day. The by-product from other paper mills is used in both these plants. J. R. Booth has a box board mill nearing completion which will soon begin operations.

R. E. Edwards, vice-president and general manager of the Wilverine Cedar & Lumber Company, which recently removed its offices from Menominee to the Soo, is optimistic regarding winter logging operations. He says there will be a substantial advance in production over last year, owing to the necessity of getting out the timber partially damaged by fire. Mr. Edwards' company expects to get out over 5,000,000 feet of pine and hardwood at Menominee and 27,000,000 feet at Little Current, Ont. The company's principal operations this season will be carried on in the vicinity of Georgian Bay, Ontario.

During September over 52,000,000 feet of lumber was unloaded from vessels at the Tonawandas, N. Y. This was the largest amount of stock to arrive during any month this season. Of these receipts 15,000,000 feet came from Canada, the largest amount to be received during any month in the history of the market from Canadian ports. Last month's receipts brought the total for the season up to 209,000,000 feet, an increase over the same period of last year of 50,000,000 feet. As the receipts give every promise of being more active during the balance of the season than the closing months of navigation last year, the total for 1909 will be much greater.

Eastern Provinces.

A large planing mill will be erected in Montreal by Friedman Bros.

The Mount Royal Box & Lumber Manufacturing Company, of Montreal, has gone into voluntary liquidation.

The Campbell Lumber Company's sawmill, box factory and lath shop at Weymouth Bridge, N.S., have been burned down with a loss of \$16,000 and only small insurance.

E. J. Getty, of Sutton, Que., has, in company, with H. H. Getty, of Farnham, purchased 207,000 feet of hemlock logs from the Sweat-Cummings Company, of Richford, Vermont.

At the annual meeting of the Haskell Lumber Company, Limited, of Fasset, Que., held recently it was decided to change the name of the company on January 1, 1910, to the "Fassett Lumber Company, Limited."

The Eastern Canada Lumber & Construction Company, Limited, has been incorporated at Valhalla, Westchester County, N.Y., with a capital of \$50,000, by George A. K. Sutton, H. S. Gould and G. E. Holmes, of New York City.

Heavy rains recently swelled the rivers and streams in the district about Quebec, P.Q., to great heights, and from many points come reports of loss of hundreds of cords of pulpwood through the parting of booms. According to a report from Batiscan, Que., the river of that name reached the highest point in many years, not excepting during the spring freshets.

George N. Thompson, of Sutton, Que., has let several big pulpwood contracts. One for 250,000 feet of logs went to J. Joyal, of Bondville. Mr. A. Perras, of Sutton, has a contract from the Thompson people to deliver 250,000 feet of mixed logs at Sutton and a contract for 75,000 feet of spruce logs also. Some 150,000 feet of logs are at Thompson's mill at Sutton at the present time.

Mr. J. Lavine, manager of Joseph Paquette, Limited, Lacroix street, Montreal, lumber merchants, states that his firm have disposed of their property to the C. P. R. for their proposed new extensions to Place Viger Station, but have secured a corner lot on Papineau avenue and Parc Lafontaine, near Ontario street east, where they will erect their new mills and offices in the near future.

The organization of the new company which has taken over the Montrose plant has been completed. The new company is called the Montrose Paper Mills, Limited. This slight difference is to distinguish it from the old company. The capital stock is \$150,000. The majority of the stock is held in Toronto and Montreal, but some is held by Kalamazoo, Mich., capitalists. The officers are: President and general manager, T. A. Weldon; Vice-President and treasurer, G. R. Copping; Secretary, Isaac H. Weldon, Directors, the above, and S. F. Duncan and S. B. Munro, the former of Cornwall, Ont., and the latter of Kalamazoo.

Papers of incorporation of the Newfoundland Lumber Company have been filed with the Secretary of State in Albany, N.Y., and in the Chemung County Clerk's office. The company is organized to deal in timber and timber lands in Newfoundland and New York State and elsewhere. The principal offices of the company are to be in Elmira. The capital stock of the corporation is \$65,000. It begins business with \$62,000. The stock is divided into 650 shares of \$100 each. The five directors are Horace B. Parker, Leonard Harrison, William O'Connor and Edwin Matson, of Wellsboro, Pa., and Elmer Sherwood, of Odessa, N.Y.

It has been announced by Mr. N. Curry, of Amherst, N.S., that the merger, which includes the Dominion Car & Foundry Company, the Canada Car Company, and the Rhodes-Curry Company, of Amherst, N.S., is now an accomplished fact, under the name of the Canada Car & Foundry Company. Mr. Curry, who is the largest shareholder, will be the first president of the merger. The other officers are W. W. Miller, vice-president, and N. S. Reader the second vice-president, the board of managers not yet being complete. No general manager will be appointed, each concern working individually. The amalgamation will employ at first four or five thousand men, but this number will be increased, as the merger has extensive plans, including the erection of a steel car plant, which will be built on an extensive plan, if the railways support it. The capital will consist of \$3,500,000 bonds, \$5,000,000 preferred stock, and \$3,500,000 common stock.

The Mexico Northwestern Railway Company, the \$40,000,000 Canadian concern headed by Dr. F. S. Pearson that is now in possession of the extensive timber tracts in the State of Chihuahua that were formerly controlled by Col. W. C. Greene, plans to not only stop the importation of pine lumber into Mexico, but to export heavily. The company have now in operation sawmills with a combined capacity of 400,000 feet of pine lumber, and by the end of 1910 expect to have an output of 1,000,000 feet a day. The timber lands amount to 3,000,000 acres. The Mexico Northwestern Railway Company is also in possession of the Rio Grande, Sierra Madre & Pacific Railroad, extending from Ciudad Juarez, across the river from El Paso, Texas, to Terrazas, and the Chihuahua & Pacific Railroad from Chihuahua to Minaca. The first of these lines will be extended at once to Madera, the company's lumber headquarters, a distance of 110 miles, and the second will be built west to a connection with the Southern Pacific extension in the State of Sonora, providing a Pacific outlet for Northern Mexico. The Pearson company will put into effect a system of modern reforestation with the object of perpetuating its timber supplies, and will divide the valley lands within the boundaries of its tract into farms for settlers.

Western Canada.

C. O. Rodgers, of Creston, B.C., is erecting another mill, which he hopes to have in operation by November 1st next.

The Candahar Lumber Company recently began business with offices in Grand View, Man., and yard at Candahar, Sask.

The Revelstoke Sash & Door Company, Limited, has succeeded R. J. Watson, sash and door manufacturer, at Revelstoke, B.C.

Davis & Ward have started their new cedar lumber and shingle mill on Loughborough Inlet, B.C. They will employ about 200 men.

The Fernbridge Lumber Company, Limited, has succeeded the Dominion Shingle & Lumber Manufacturing Company at New Westminster, B.C.

The Cowan Lumber Company are building a large sawmill at Crooked Lake, north of Prince Albert, Sask. A railroad is being built to that point by the Canadian Northern, from Shelbrook.

A sawmill is being installed by the Hardscrabble Lumber Company on the south bank of the Skeena river, B.C., a few miles above Kitselas. The capacity of the mill will permit of turning out 15,000 feet of lumber any day, and it can run up to 25,000 feet daily without crowding.

A sale of Vancouver Island timber, involving half a million dollars, and 30,000 acres, has been concluded by H. H. Jones, of Victoria, B.C., formerly of Port Hope, Ont. Mr. Jones, who is well known in Toronto, says that the sale will revolutionize the coast export trade, as the mills will be on Esquimaux Island, and in touch with a billion feet of timber. The same management will exploit the Victoria & Barkley Sound Railway.

A prospecting party returned from a trip through the Beaver Lake district, north Saskatchewan, reported that fierce forest fires were devastating the country. Fire was then raging fiercely north of Pas Mission, and doing thousands of dollars damage to timber limits. It covered a space of over twenty miles, and the dry moss and grass was greatly assisting the blaze. The limits are the property of Henry Finger, of Port Arthur.

Three thousand two hundred and forty acres of Crown granted timber, coal and agricultural lands at the northern end of Vancouver island have passed into the hands of Mr. C. S. Battle, of Vancouver, by purchase from Captain John Irving, of Victoria. The property, consisting of 24 sections, lies about three miles from Port McNeill on the eastern coast of the island, and extends to within a very short distance of Rupert arm, which is a deep fiord connected with Quatsino sound. The sale carries with it the rights to the underlying coal measures. It is stated that the area embraced in the 24 sections is the flattest piece of land on the whole of Vancouver island, and that when the timber is cleared off it will be an ideal farming land, owing to the great depth of soil, which in places runs from 6 to 22 feet. It is reported to be the intention of the purchaser to first log the property and then start prospecting for coal. An excellent harbor for handling the coal is available at Port McNeill.

Hespeler - - - Ont.

The cheapest way to skid and load logs is by steam power. The

Universal Logger

is a combined two line skidder and loader with separate engine for loading with steel skidding boom and steel swinging loading boom.

It is self-propelling, spots its own cars and moves rapidly from point to point, saving time and the usual switching expense.

Ample water tank capacity is located between the trucks, and the frame is constructed to permit empty cars to pass through the machine for loading by means of its own power.

This machine is especially adapted for light steel or wooden rails.

Operating with Horses is Expensive!

Patented in Canada and U.S.A.

Dunbar Logging Engine.

Dunbar Logging Engines will haul upwards of 150,000 feet of lumber, depending on the condition of the road which only requires to be made as for horses' operations except that they should be nine feet wide.

In every case there is a large saving over the use of horses. The results to be obtained are not based on theory but have been actually obtained and in some cases the saving has been 75%.

Our descriptive circulars and photos will be gladly sent upon request. They will certainly interest every lumberman who recognizes the importance of economical log hauling.

We also manufacture Shingle Machines, Rotarys, Stock Gangs, Planers and all Saw Mill Machinery.

No. 24 Special Fast Feed Planer and Matcher

Made by THE PLANER SPECIALISTS

This New Model Machine is designed for all requirements. It works 9, 15, 18, 24 or 30 inches wide by 6 inches thick. Has six feed rolls. Among the many special features are the following:

ADJUSTABLE WEDGE PLATEN distributes the cut between the top and bottom heads without altering the finished thickness or location of matching.

BELT RELEASING DEVICE by the motion of a single lever releases or tightens all belts; provides means for independent tightening.

AUTOMATIC BINDERS prevent the side head belts from climbing or chafing even when working narrow stock.

RADIAL KNIFE SETTING GAUGE acts like a pair of calipers to accurately set the knives without measuring.

TRUING DEVICES for top and bottom heads sharpen the knives in a moment's time without stopping the machine or disturbing any adjustment.

CUTTER HEAD BOXES have self-adjusting caps. Merely require locking when so adjusted. Are self-oiling.

All original features in Woods Machines are fully covered by patents

Wherever you find a **LOGGING CAMP**

you'll find **DISSTON SAWS**

The Disston Saws were there when the remotest lumber camps of the world were started. Seven decades of universal saw satisfaction means much to the progressive lumberman. The superiority, even-running and clean cutting of Disston Saws reduce labor expense to a minimum. Hundreds of Disston Saws that played a prominent part in the "Winning of the Wonderful West" are to-day being used by the sons and grandsons of those pioneers.

Disston Saws are as important to a lumber camp as the wood they saw, that is if service, time and money are of first importance. Disston Saws "make good" because there are no other saws in the world that are made of such high-grade steel as that manufactured by the Disston secret process. Every circular and band saw is as true as science can make it; perfectly balanced; hardened and tempered by Disston exclusive methods, and with a guarantee that makes it the best saw on earth—Peer of all others.

There's a Disston Saw for every lumberman's purpose, and every lumberman should use a Disston, if he would avoid aggravating saw troubles. The cost of a Disston is insignificant compared to the length of service and satisfaction it gives.

If you would know about saws, there's valuable information in our "Handbook on Saws." Sent free on request. Address

No Matter What Your Cutter Head Requirements

You can get a Shimer Cutter Head made especially to meet those requirements.

Figure the saving on having a Cutter Head that will always be ready for the machine when a rush order comes in for some specialty you are making. No filing of Cutters to get the particular shape needed—no filing to shape each time the Cutters are sharpened—no filing for clearance to keep the cutters from burning the lumber—no lining up of knives on the Head for exact register.

The shape of the pattern is turned into the Bits, the entire circle of which serves in its turn to make up the cutting edge. The arranging of the Cutters in pairs, and in upper and lower series on the head, provides for the perfect clearance to all leading points, and permits a ready expansibility the tongue and groove for tight and loose fitting or for thicker or thinner stock.

They are not an expense to you, but they save expense from the time you put them on your Matcher, Moulder or Tenoner. The more intricate and difficult your patterns are to maintain, the more time and labor they will save you.

A trial of the tools places in your hands our most convincing argument. Write us about your requirements at once. Address

We Make All Kinds of Machinery and Tools for the Care of Saws

The sectional view of our swage shows our new spring bracket which permits the swage to tip forward during the operation of swaging. In this bracket we have preserved our compact construction features. It is practically as strong as a solid bracket, is impossible to get out of order, and is easily adjusted to give any amount of spring desired, or to be rigid and allow no spring.

This new feature of Hanchett Swages still further increases the efficiency of a swage which without this improvement has for a number of years been quite generally conceded to have the lead over any other swage manufactured. The spring bracket, in conjunction with the action of Hanchett dies, proves unusually effective in bending the tooth forward so that it may be faced perfectly with little grinding.

Sectional View of Hanchett Band Saw Swage.
(Patented January 5, 1909.)

With this spring bracket with its perfect adjustments, added to the unusually wide range of adjustment of Hanchett swages, the filer can swage his saws to a nicety, and adjust his swage to place the points just where he wants them, and get any amount of hook wanted.

These brackets will fit all the old Hanchett Swages, so that our old customers can avail themselves of this improvement by purchasing from us the new spring bracket.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

Let us send you our New 1909 Catalog No. 18. It is the most comprehensive and up-to-date Filing Room Catalog in existence. It will interest you. : : : : :

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

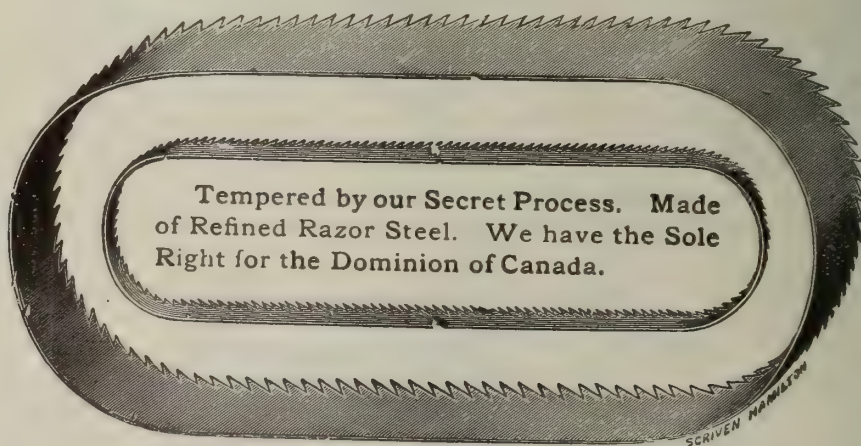

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

YOU WILL READ THIS ADVERTISEMENT.

It has then served its purpose. We want to ask you a question and will confidently leave the answer to you.

DO YOU THINK YOUR INSURANCE RATES TOO HIGH?

We have a plan that will reduce your rates and invite you to correspond with us, we will be glad to explain.

ASK FOR OUR ADDITIONAL LINE PROPOSITION.

Would you not feel safer with from \$1,000 to \$10,000 additional protection? Suppose you have a fire to-night. Would your present insurance put you on a sound business basis again? Write us to-day, now that you have read this advertisement before you forget.

PETERBORO SAW MILLS

How You Can Increase Your Net Profits \$2,000.00

This **FOUR INCH STEAM SET WORKS** will do it.

Figure it out this way:

In the first place, our customers themselves state they are cutting on an average 2,000 feet more lumber per day with this setter.

And an average sawing season contains 150 working days.

That is, your cut will be increased 300,000 feet per season.

Now what is it going to cost you to cut that 300,000 feet?

The machine, plus freight and installation charges, plus interest, will cost you about \$720.00.

That is \$2.40 per thousand feet of your extra cut.

And then you will have to add the cost per thousand feet of your logs—you know exactly what that is.

The result is the **TOTAL COST OF THE EXTRA 300,000 FEET** you cut, because your operating charges have remained exactly the same, no extra wages, no extra wear on your machinery.

Now you will receive an average price of at least \$20.00 per thousand for that lumber.

Deduct from that your total cost per thousand feet for this extra output, and

You will find your total profit is over \$2,000.00.

That is, the machine pays for itself in one year, and makes \$2,000.00 extra profit for you besides.

Would you like to go further into this matter? Write us.

Snow Plows The Famous Brazel Patent

Known in every Camp from the Atlantic to the Pacific, as the most satisfactory Snow Plow made.

COMBINATION MODEL, LUMBERMAN'S SNOW PLOW, CAN BE USED
EITHER WITH OR WITHOUT RUT CUTTER.

One man to operate. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9' wider than sleigh track or narrower if desired. Height of Mouldboards prevent snow falling back on track. **Brazel Plows** cut 6" wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure from an ice road leaving a clean roadbed. Roll up and push entirely away from the road, 12' of loose snow each time the plough passes over.

Sold on their merits. Strongly built and of first class material. Well finished and fully guaranteed.

Illustrated Catalogue and Prices on application.

Style "B" for Mill Furnace

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one:—

Berriedale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited, Orillia.

Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

The Lidgerwood Patent

Hauling Loaded Sleds over a Ridge

SLEIGH HOIST

A machine designed to hoist or lower sleighs loaded with logs, pulpwood, bark or other forest products, in mountain logging.

It handles steadily and under perfect control the largest sleigh loads, on any hill, **no matter how steep**, and up to 3,500 ft. in distance.

Saves horses when used with them. Maiming and killing of horses on steep hills is eliminated; saves the horses from the hardest work, that of taking the empty sleighs up the hills.

Does what horses cannot do. The hardest uphill haul costs no more than hauling on the level with horses. Enables bringing timber over heights of land, thus frequently saving long hauls; the improving of small streams; or the absolute loss of stumpage.

It pulls itself about in the woods; uses wood for fuel; and is simple to operate

We now have a representative in Canada, who will examine your conditions and tell you what can be done, free of charge of any nature.

Saws**

**Made
in
Montreal**

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take \$100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

Canada, United States and Great Britain, \$2.00 per year, in advance; other foreign countries embraced in the General Postal Union, \$3.00.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 29

Toronto, November 15, 1909

No. 22

Increase of Exports Still Continues

The statistics published by the Department of Trade and Commerce for the Dominion of Canada, continue to show a gratifying growth in the lumber trade of Canada. Exports have maintained the increase, commenced a few months ago, and are now establishing new records. Both to the United States and to the United Kingdom the exports for August, 1909, were considerably larger than in August, 1908. To the United Kingdom, exports were valued as follows: August, 1909, \$1,901,108; August, 1908, \$1,720,992. To the United States the value of exports was, August, 1909, \$3,973,516; August, 1908, \$3,054,422.

The total exports of forest products from Canada during August last amounted in value to \$6,039,467, as compared with \$4,544,072 in August, 1908. This was the largest export for August on record, the next highest having been \$6,007,579, in 1906. In July last the forest products exported totalled in value \$5,935,277, which also was a record for July. These figures relate only to the exports of home forest products. With the foreign products exported added the total for August was \$6,090,329, and for July \$5,964,863. Exports of forest products again ranked second in value during August, being exceeded only by those of animal produce, which totalled \$7,218,896. The total exports of Canadian produce of all kinds in August was valued at \$23,537,330, against \$22,910,611 in August, 1908. This was exceeded only in August, 1907, and August, 1909, when the totals respectively were \$26,179,698 and \$24,050,561.

For the five months ending with August the exports of forest products totalled \$20,801,843 in value, against \$17,861,247 for the same period in 1908. This total was exceeded only once in the same five months of previous years; namely, in 1906, when the value was \$21,275,281.

Imports of wood and manufactures of wood during August, 1909, were valued at \$965,198, of which \$293,237 worth was dutiable and

\$671,961 was free of duty. In August, 1908, the imports totalled \$643,437 of which \$178,028 was dutiable and \$465,409 free. For the five months ending with August, 1909, the imports were valued as follows: free, \$1,345,091; dutiable, \$3,480,059; total, \$4,825,150. In 1908 the figures for the same five months were: free, \$1,002,321; dutiable, \$2,549,276; total, \$3,551,597. In 1907 the figures were: free, \$1,499,780; dutiable, \$5,188,124; total, \$6,687,904. The total imports, therefore, while greater than those of 1908 by \$1,273,553, are less than that of 1906 by \$1,862,754.

An interesting comparison is afforded by the figures of the United States exports and imports of wood and wood products for August. The total value of imports during August, 1909, was \$5,582,198, as against a total of \$4,116,547 for the same month last year. Exports of domestic woods and manufatures thereof for August, 1909, reached a total of \$6,495,662; for August, 1908, the total was \$5,080,270. Wood and manufactures thereof coming under the class of "foreign merchandise," to a value of \$132,348 were shipped out of the country during August this year, as against a total of \$85,890 in August, 1908.

Mistaken Views on Export of Logs

More ink has been spilled of late over the pulpwood situation, so far as it concerns Canada and the United States, than over a good many other subjects which are better worthy of discussion. When, however, a Canadian finds his way into print with views which are known to be extravagant, it is time to spill a little more. In a recent interview which appeared in the daily press, and found its way thence into a number of United States trade papers, Mr. John R. Barber, of Toronto, the well known paper manufacturer, is quoted as having expressed some ideas which cannot be reconciled with existing conditions. After suggesting that Canadians should look at the present tariff from a purely business point of view and get all the business they can, he uses this maxim as ground for an argument in favor of abolishing the present regulations restraining the export of unmanufactured wood from some of the Canadian provinces.

The interview is thus summarized in one publication: "At the present time, before the Quebec leases expire, Mr. Barber holds that Quebec might very well abolish the difference between the duties on wood manufactured into pulp in the country and that sent out in form of wood. If this were done Quebec would at once get its pulp into the United States free and would get its paper in for \$3.75 per ton instead of a little over \$6. The Province of Ontario might for a year abrogate its regulation prohibiting the export of wood cut on Crown lands. This could not be done without the consent of those holding pulp concessions, but he thinks this would not be difficult to obtain. Then Ontario wood and pulp and paper would go into the United States on more advantageous terms than now. She would get pulp in free instead of \$1.67, and paper in for \$3.75 instead of \$5.75. If this were tried until next March then perhaps conditions would have been so affected that the arrangement might be continued and even extended. In any event Ontario and Quebec would enjoy a period of freer trade, and would be just as well off in regard to any action of a retaliatory nature as they are now. Mr. Barber sees no use in losing good business for a sentiment. In a word, accept what is offered now while money is to be made out of accepting it, and let the future take care of itself—do not anticipate."

Mr. Barber's arguments could not be more specious if uttered by a citizen of the United States, who wanted our raw material for his own factories. Quebec certainly might benefit by removal of the present rebate on pulpwood manufactured into pulp in Canada, because this rebate is universally recognized as being of no effect so far as encouraging home manufacture is concerned. The only effect is to give the United States an excuse for imposing their own maximum tariff by way of retaliation. The case in Ontario, however, is far different. Ontario's prohibition of the export of logs has been of the greatest possible benefit to the province. It has promoted the growth of great lumbering industries in many parts of the country. It could not be abrogated without serious loss to the industry and to all who depend upon it for their living. Ontario wood might go into the United States on more advantageous terms than before, as Mr. Barber says, but not so the pulp. In a short time no pulp whatever would cross the border. The duty might be nil, but the trade would also be nil, as United States mills would use our logs for making

pulp, and the pulp business here would be killed. Ontario would gain nothing by such a change and would lose its lumbering and pulp industries in a very short time. Most of us remember too well the conditions existing before the prohibition of log export from Ontario was enforced, to want them to be repeated.

Mr. Barber is a bit at sea also about securing the consent of holders of pulp leases in Ontario before doing away with the prohibition of log

export. There are only about three pulp concessions in Ontario and it is a part of their agreement that they must manufacture their timber into pulp in Canada. It is the Government which stipulates that they must manufacture in Canada, not they who undertake to manufacture if the Government will prohibit the export of pulpwood. Altogether, Mr. Barber's interview is unfortunately inaccurate as well as untimely, and gives a mistaken impression of the views prevailing in Canada.

The Importance of a Thorough Knowledge of Contract Law

The legal fraternity have a good deal to thank the lumber trade for, in the way of business. If statistics were available it would probably be seen that the lumber manufacturing and trading interests of the country provide a goodly percentage of the cases coming before the courts. In one way and another legal pitfalls are continually found in a lumberman's path, and sad to relate, the lumberman often falls in. There should be much less resort to litigation than there is, but how to bring this about is a difficult problem.

Lumber transactions of every kind, from the felling of the tree to the marketing of the product, ought to be the result of definite and specific contracts. In the majority of cases the contracts are there, but the parties, acting generally in good faith, sometimes work at cross purposes and one of them through a misunderstanding of the contract precipitates a legal dispute which costs both parties a lot of money and anxiety. A man carrying on a lumber business ought above all things to familiarize himself with the law of contracts, so far as it affects him. He should be able to understand the exact result of any undertaking he enters and especially appreciate the implied obligations of his actions, which, though not expressed in the contract, may be as definitely binding as though they were in black and white. There are so many men looking for excuses to avoid unpleasant duties under a contract that serious loss is sure to result to the man who does not arm himself with the best weapon against them. The only effective weapon of this nature is knowledge of the law of contracts. A contemporary publication goes so far as to suggest that public schools should give simplified instruction in the matter according to some recognized authority. No information imparted in our schools to-day would be of more value than this.

The basic idea of a contract is extremely simple. Two or more people agree to do certain things or to leave certain things undone for a consideration. There must be an agreement and there must be a consideration. Essentially the "consideration" is all important. The consideration may be implied, and the extent to which such an implied consideration may be imported into a contract, is considerable. A case which recently came before an Ontario court bears strongly upon this point. The defendants made use of certain river improvements constructed by the plaintiffs. They were floating logs down the river and inasmuch as they used the improvements for this work, it was assumed by the plaintiffs that they would be compensated therefor. They implied an obligation upon the defendants to compensate, because the defendants used the improvements without denying the obligation. The courts decided that the plaintiffs were in the right, even though there had been no undertaking on the part of the defendants to pay for the use of the improvements. The legal situation resolved itself into the existence of a contract by reason of the use of the improvements without disavowal of the plaintiffs' claims for compensation.

The principle involved has no serious intricacies about it. If the defendants had made a study of their situation beforehand they would probably have quickly realized their obligation and avoided legal expenses which were probably quite extensive. This is quite an average case. The lumber press reports similar ones with unwelcome frequency. Business, in a lumber office, is generally so urgent that many things have to be overlooked. The legal responsibility, however, cannot be neglected without danger of serious loss, which might frequently be avoided by a study of contract law.

B. C. Lumberman Writes of Promising Western Trade Conditions

It does one good to come into touch with some of the optimism which is prevalent throughout Canada to-day, especially among lumbermen, and to contrast it with what was fashionable a few months ago, when conditions were not quite so promising. Genuine Canadians are never lacking in faith in their own country, but it is their characteristic not to publish their faith as much as they might. Mr. C. S. Battle, of Vancouver, however, is one of those who believes in letting others know of Canada's promise. In a brief but timely letter to the "American Lumberman," he has given our neighbors to the south a little education, which, in view of their lumber tariff eccentricities, will not be wasted. Mr. Battle writes as follows:

"The general trend of conditions and the lumber market seem to be upward and I doubt not, from the signs of the times, that next year will be the beginning of a period of prosperity in the lumber business, including all of its allied interests. British Columbia possibly is the least developed and the least known of any white man's country on the American continent.

"We have a province as large in area as the States of Texas, Colorado and Washington, with unbounded resources in mineral, timber, ranching and fruit lands, fish and shipping facilities not excelled by any country on the western hemisphere—but back to the lumber industry. I will state that while there has been a market for all the lumber cut (this being especially true of the coast district), at the same time the price has been low and lumbermen generally are not satisfied with the results of the last two years' work. Stocks on hand are less than they have been for some time, and everything points to a successful year in 1910—in fact, the demand now for lumber is good, but prices remain low, owing to a proper concert of action on the part of the lumber manufacturers.

"The 'McBride Government' has just appealed to the country on its railroad policy and doubtless will be returned. If so it will mean the expenditure in this province in the next three years of about \$20,000,000 by the Canadian Northern alone. Add to this amount the completion of the Grand Trunk Pacific from Edmonton to Prince Rupert and the auxiliary line being built by the Canadian Pacific and Great Northern, and you will have a faint idea of the great developments that are in store for this section.

"In addition to the amount of lumber and ties required for the building of these different lines of railroads, there is an ever increasing demand for lumber for home consumption and also for the great wheat belt in the northwest provinces, including Manitoba, Saskatchewan, Alberta, and even as far east as Ontario, British Columbia must supply the greater portion of the lumber used in these developments.

"If you are at all familiar with the map of this province you will notice the different inlets and waterways in and around Vancouver island and the thousands of islands lying between Vancouver and along the mainland to Prince Rupert and beyond. Mills will be built on salt water for export trade, anticipating the completion of the Panama canal, which will help British Columbia from the lumbering standpoint almost as much as it will the States of Washington, Oregon and California. The building of these roads will develop the interior of the province. This, in connection with the great waterways, will make the interior of British Columbia a great lumber mart. The probability is that at the next session of the Dominion Parliament retaliatory legislation will be enacted on lumber—that is to say, heretofore and at the present time there is no tariff on rough lumber entering Canada, but in keeping with the protective policy of the world, and especially of the United States, it would not surprise me to see a tariff placed on American lumber that would about equal the

present American tariff on Canadian lumber. While this view is to some extent speculative, at the same time the justness of the situation has been growing on the people for some time.

"There has been quite an amount of activity in standing timber for the last three or four months, and next year bids fair to break all records in this line. You are aware that the lumber business is practically in its

infancy in this province, and you will also see that my position is, to some extent, based on the vision I have of the future.

"It was not my intention to have written at such length, but to do anything like justice to a big subject in a big country, I find that it is hard to condense what one has to say."

Mr. Battle's views are shared by many other business men.

Decrease in Fires Indicates Greater Care on Part of Limit Holders

The report presented by W. C. Gladwin, chief fire warden for British Columbia, for the season of 1909 is an excellent one, indicating that greater system is prevailing in the locating and fighting of fires and that with greater experience the fire fighting force is becoming more nearly equal to the heavy demands which are made upon it. Even the most efficient of forces will sometimes meet with fires too great to control. This year, however, circumstances have combined with the watchful care of the fire wardens to prevent the occurrence of large fires and the result has been a comparatively insignificant loss. This success, however, should not be accepted too readily as evidence of a thorough system of fire prevention. It is rather, evidence of what can be done by a good trained force of small dimensions. It should encourage the Government to extend its force, because it proves that money thus spent saves timber of many times its value. Up to a certain limit, which probably is far from being reached as yet, such expenditures will surely be remunerative and will have the added justification that, until this limit is reached, thorough precautions cannot be said to have been taken against the occurrence of great conflagrations, which may wipe out enormous areas of valuable timber.

Some of the figures presented by Mr. Gladwin in his report are as follows:—

Only 240,000 feet of timber in the ten coast districts and 8,000,000 feet in the province as a whole, was destroyed by fire during the season. As regards the coast districts, if this area is cut within a year the loss will be nil. The area burned over amounts to 1,532 acres, and of this only 176 acres will be kept for another growth, the rest being cleared for settlement. The total number of fires attended to was 77. Of these eight were large fires, while the rest were discovered in time and extinguished

by the fire wardens in the course of their patrol, all of which, had they not been discovered, would have spread and destroyed the standing timber and other property in the vicinity. In only two instances did the wardens have to look after fires that had been started under permits, though 1,600 permits were issued, and the holders were promptly dealt with. Mr. Gladwin states as his opinion that with the great amount of clearing in operation this season the loss would have been enormous without the permit system, which makes it possible to place the responsibility.

The report also contains the gratifying information that the loggers are taking better precautions than ever before to prevent fires. There are large tracts of land that have been logged over where a good growth of small timber is still standing, and if fires can be kept out of these tracts in the future, in a few years they will become valuable timber land. The general opinion of wardens is that the refuse from logging should be left on the ground to rot and form a protection to the next growth, and that the only cases in which the refuse should be burned are along the right of way of a logging railroad, where there is danger from ignition by the sparks from locomotives in the dry season.

Of sixteen informations laid there were ten convictions, four dismissals and two withdrawals. The wardens inspected 179 camps and 217 donkey engines. In a summary, covering the province as a whole, it is stated that the total number of fires was 263 from the various causes: Unknown, 67; settlers, 49; campers, 30; locomotives, 86; donkey engines, 23; lightning, 10. The timber destroyed amounted to 8,000,000 feet, the fires being over 75,550 acres of mostly logged over land. The number of men employed in fighting fires in all parts of the province was 376, the total wages paid being \$3,711.

A Concrete Example of the Superiority of Wooden Boxes

The campaign in favor of the use of wooden packages instead of pulp and paper will be stimulated by the results of a special enquiry made by the Canadian trade commissioners in various important markets of the world. Many matters relating to packing are discussed in the reports received, but prominent among them is the complaint connected with the cheese import into Great Britain. The cheese industry of Canada is so important that no risk should be taken which may result in the creation of even a slight prejudice against it. Wooden boxes alone are suitable for cheese shipments, but recently efforts have been made to save money by the use of pulp boxes. The result has been so unfavorable as to bring forth a strong protest from the consignees in Great Britain. The following is a quotation from the report referred to above, and comes from the Leeds and Hull trade commissioner:

"Some time ago a consignment of cheeses that reached this district from Canada were put up in boxes made of pulpwood in lieu of the usual wooden box. Although every credit is due to the shipper for his enterprise in endeavoring to promote this cheaper form of package, yet the continuance of this method of packing cheese is not advocated by local importing houses. It is pointed out that in sending cheese this way, there is always the risk—entirely unavoidable in some cases—of their becoming exposed to rain or damp during transit. Indeed, the same shipment met with this experience en route, with the result that on arrival in the warehouses here, the fastenings, which were intended to hold the case in position, were found to have lost their grip entirely, owing to the pulp having by some means or other become damp. An admirable form of package for home trade and also from an economical point of view, yet they are looked upon with but little favor here. It is stated that they do not afford the maximum of protection in accordance with the weight of cheese."

A similar report from Bristol says:—

"Bad packing frequently gives rise to damage suits owing to the merchant's claim on carriers for damage to goods caused by insufficient package. A further incentive for better packing is the preference of retailers who exhibit goods at their stores, for neat and unbroken packages. Packages which have to be handled time after time in course of transit should be made up of sufficient strength to withstand ordinary handling and stowage."

If arguments were needed among lumber manufacturers, to prove the superiority of wooden boxes over paper and pulp packages, no better one could be secured than the above. Lumber manufacturers, however, understand the situation pretty well. Their problem is to acquaint the consuming public with the actual facts, so completely as to put an end to experimenting with useless forms of packages. Such experiments are carried out by people who would gladly save the money they waste if they were educated by publicity, to a proper appreciation of the futility of their efforts. The ways and means of doing this are numerous. The first to suggest itself is by insisting personally upon wooden packages for all goods purchased in bulk, which are ordinarily delivered in wood. Lumber manufacturers through their camp necessities control an extensive demand of this nature and can do something practical in this line. Another method is available, which can be utilized to greater advantage. Lumber manufacturers, makers of boxes and box shooks in particular, are closely in touch with the consuming market. They should pass by no single opportunity of explaining to consumers the advantages of wooden packages. A passive policy of looking only for orders in the regular channels of trade, will not be of much avail in combatting the efforts of those who are selling paper packages. Actual users could be circularized to good effect.

The Piping Plant for a Lumber Dry-Kiln

Practical Consideration of Accepted Methods of Installation—Some Important Essentials which Owners Should Understand as well as Engineers and Superintendents

Seasoning lumber in dry kilns presents so many engineering intricacies that it is sometimes looked upon with undeserved anxiety by saw-mill owners. Beyond question, the subject should be minutely studied before a system is installed and just as minutely afterwards. Many who are interested in dry kilns are not practical steam engineers and for such, even an elementary knowledge of some of the important essentials is difficult to acquire. The piping of a plant, for instance, is sometimes misunderstood even by those who undertake to superintend it. The following article, contributed recently to the "Woodworker," deals with this subject in a practical and simple fashion:

It seems to be difficult or impossible for some men to discard the idea that if hot water resulting from heating a kiln is to go back into the

admitted to the surface of this water, and it then runs into the boiler by force of gravity, exactly the same way as if there was no pressure at all on the machinery.

Some people are firmly convinced that steam at high pressure (say 100 pounds) contains much more heat than if there is only a low pressure (say 10 pounds), but the fact is the capacity of steam for transferring heat from one point to another is not determined by its pressure, as the total heat of steam at 10 pounds is nearly as great as at 100 pounds. However, if it is considered better to carry boiler pressure on a kiln, it can be done by dispensing with the reducing valve, 2, and the whole apparatus will work as well as before. Attention is called to the fact that there is a globe valve, 5, next to the boiler in the feed pipe, and an angle valve, 6, also in the feed line, with a check valve, 7, between them. This arrangement makes it possible to repair the check valve without removing pressure from the boiler or the kiln, although these valves seldom need repairs.

Fig. 2 illustrates an engine, boiler and a dry kiln all on the same level, arranged to use all of the exhaust steam, thus saving much live steam. The engine exhausts through the separator, 2, which takes all cylinder oil and water cut of it, thus leaving only pure steam to go into the kiln. The back-pressure valve, 3, is closed, but there is only a small weight on the lever, thus limiting the back pressure. This lever should not be overloaded, for under certain conditions it will add an unnecessary load to the engine.

On a certain occasion I was asked to locate the trouble with an engine that could not run as much machinery as formerly. Some of the exhaust steam was wanted in the mill, but not all of it, hence when several pieces of cast iron were put on the back-pressure valve lever, and the engine lifted the valve against the back pressure created by these weights, it required one-third of the power to do it, and as this was all lost work, there was not enough left to operate the machinery.

Steam at low pressure goes out through the valve, 4, and enters the kiln. If there is not enough of this to do the work, live steam is admitted through the stop valve, 5, to the reducing valve, 6, which automatically regulates the amount delivered, so that the pipes are always full and none is wasted. Hot water resulting from the heating process

Fig. 1

boilers whence it came in the form of steam, the bottom of the kiln must be located several feet above the top of the boiler. If this mistaken idea is to be put into practice, the kiln must be placed high above the ground, making it inconvenient and costly to get lumber into and out of it, or else the boiler must be set in a hole that is never made large enough to give the fireman a chance to work with comfort, and in some cases he cannot properly care for the boilers, even if willing to work where it is dangerous and uncomfortable. The truth in the matter is that both kiln and boilers may be located on the same level, or the boilers may be set above the kiln, without preventing the hot water from going back, thus using pure water that will not ruin the boiler with scale, and saving much heat that would otherwise be wasted.

Fig. 1 illustrates a boiler and a kiln set on the same level, where steam is generated at high pressure in the former and used at low pressure in the latter. The reducing valve 2 takes steam at boiler pressure and reduces it to the desired point for use. It then is delivered to the kiln and condensed in the process of taking moisture out of lumber. Hot water gravitates to the receiver 3, from which it is taken by the return trap 4 and put into the boiler. There are several points to be observed in this connection, as otherwise the plant will not work well. The receiver 3 must be below the lowest pipe in the kiln in order to drain all of the water. The drip pipe must run "down hill" all the way, that water may run through it readily and no air pockets be formed to prevent rapid operation. The return trap 4, must be at least 3 feet above the highest water line in the boiler, as otherwise the water may not flow into the boiler as rapidly as it comes from the kiln. There must be enough pressure in 3 to raise water readily into 4. This means that it requires 1 pound for each 2 feet that it is elevated. It is necessary to put a steam gauge on 3, as otherwise the pressure may be too low for successful operation, but the true cause of failure will not be apparent. The reducing valve, 2, must be adjusted accordingly, not failing to remember that although the steam pressure at this point may be known, it does not tell how much there is at 3, and there may be much difference between them, owing to rapid condensation and small feed and return pipes. Do not forget that water is not forced from 4 into the boiler by pressure, the same as it is put in by a pump, as boiler pressure is

Fig. 2

gravitates to the receiver, which is fitted with a hollow float. When the water level rises it lifts this float, and this, in turn, opens a valve in the steam pipe, admitting steam to the pump, which takes the water and discharges it into the boiler as fast as it comes to the receiver.

The steam plant and the dry kiln may be located in the most convenient places for them without regard to other conditions, where this plan is adopted, as it is only necessary to set the receiver and pump below the kiln, and the apparatus will do good work. The pit containing the pump ought to be large enough to admit of repairing and packing the

machine without inconvenience, as it costs but little more to build one 8 feet or 10 feet square than to make it 6 feet, although the latter may be large enough to contain the pump.

A short time ago I saw one of these pits that was just large enough to admit the pump and receiver, when they were lowered vertically, but the engineer could not stand in the pit at the same time, consequently when it became necessary to pack or repair the pump he had to disconnect the pipes and hoist the machine to the surface, in order to find room enough to work, causing unnecessary trouble and expense.

Lord Northcliffe Favors Prohibition of Pulp Export

Lord Northcliffe, the well known English publisher, who has established a large pulp and paper plant in Newfoundland, was the guest of the Montreal Canadian Club at luncheon on Nov. 5. Lord Northcliffe came out in most emphatic terms in favor of the prohibition of export of our pulpwood. "It is high time," he said, "that the Federal Government of Canada came to the aid of the provinces, and supported them in the fight which they are making in connection with the pulp question."

"If Canada would prohibit the export of pulpwood, eastern Canada would become the greatest pulp and paper manufacturing country in the world. Spruce trees are to eastern Canada what wheat is to western Canada. You can search the entire world, but there is no place where you will find such a prolific waste of raw material as in Canada. It is a crying shame that Canada should receive \$6 a cord for pulpwood, which is sent to the United States and made into paper, realizing for the latter in the neighborhood of \$40 a cord, thus building up huge manufacturing establishments in the United States at the expense of the Canadian people. I feel that this question is one of the most important facing the Dominion Government, and if they are at all wise they will so arrange the tariff that the manufacture of wood products will take place in Canada. At present the Canadian Government is simply allowing a rival, and at that an ungenerous rival, to deplete their most valuable heritage. It is the most important birthright Canadians have."

"I know that beyond question you have here in Quebec and Nova Scotia and elsewhere the raw material that if the Dominion Government will say the word, can make you the great paper makers of the world. Our friends across the line are making the most desperate endeavors to get their raw material in this country duty free, and one can hardly imagine a better example of what they would call a lead-pipe cinch than that. They would pay \$6 a cord for logs in Canada, take them to the United States and manufacture them with American labor and sell the product at \$40 a cord, and drive Canada out of the market with her own raw material. People say our farmers do well selling their wood at \$6 a cord to Americans. It is a matter which can easily be rectified by the Dominion Government."

"Read the history of the world, and you will find no example of such reckless and relentless parting with raw material to a friendly rival whose friendliness is driving you out of the world's markets. And in your forests which are not yet protected this logging business for the market is simply a brutal process of extermination of the trees. In many of the European countries where forestry is a science, such as Germany, Norway, Sweden and France, no man can cut a tree unless he produces a guarantee that he will plant two more. When you sell your forests to foreigners or urge your farmers to sell them to foreigners at \$6 a cord, they are not particular what they cut. But in your spruce forests you have a heritage which no scientist or chemist can rob you of, and it is your duty to take care of this heritage as they do in Europe, and see that no man recklessly robs at least two generations to come of labor, work and profit from them."

"When I come here and see the people of this country seeming to regard the spruce trees as though they were wheat, which can be grown in a year, it seems a sad thing that they should be content to sell abroad such a valuable concession at \$6 a cord. I know when you consider this you will realize that it is due to the eastern part of Canada that the Dominion Government should back up the provincial governments in doing everything in their power to protect your spruce trees against foreign depredation. I like to discuss this question with business men, because Uncle Sam is putting up the biggest kind of a bluff—anyone can go and see that he has not got the trees and needs yours. But it is a bluff that fortunately is more likely to succeed at Westminster than at Ottawa, where you know him."

Ontario Government to Sell Lumber in Rondeau Park

The Ontario Department of Lands, Forests and Mines has commissioned Mr. E. J. Zavitz, professor of forestry at the Ontario Agricultural College, to take stock of the surplus growing timber in Rondeau Park. His report will be followed by the sale of a large quantity of valuable timber by public tender. Mr. Zavitz will work in conjunction with Mr. Isaac Gardiner, the veteran Chief Ranger of the Provincial Park, who will commence his work immediately. Rondeau Park, according to Hon. Frank Cochrane, contains the most valuable growth of varied trees in the province. It is still in a primitive state and has never experienced forestation. As a result the growth has multiplied and thickened until many

valuable matured trees are crowding out the new saplings. In some cases decay from old age has set in.

The Minister plans a careful and judicious pruning of the wide acreage. Mr. Zavitz will travel over the whole park and mark out the matured trees he deems it wise to remove. These will be sold to the highest bidder and the timber removed on the snow. This will be followed in the spring by an advantageous encouragement of new growth. Considerable satisfaction is expressed with the success which has attended the "forest nurseries" established on the cleared lands recently secured by the Crown in older Ontario, and Hon. Mr. Cochrane anticipates being able to submit to the Legislature at its next session the outline of a progressive general park and forestry policy for Ontario.

Good Demand for Nova Scotia Lumber

Clarke Brothers, lumber dealers, Bear River, N.S., write under date of Nov. 5th that they find an increasing demand springing up from nearly every market with which they are doing business. Prices are firm and stocks are exceptionally well cleaned up, so that there will be little available for shipment to the United States or elsewhere until after next year's cut is thrown upon the market. Clarke Brothers are now getting their camps under way for the cutting of next year's crop.

Speaking of market conditions, they say that the outlook is favorable and the tendency in prices is upwards. The demand in all lines is good and the stock will be cleaned up much closer at the end of this year than formerly. Referring to matters of general lumber interest, they draw attention to the necessity for more careful cutting and a closer supervision so as to eliminate the waste of timber resulting from leaving the tops of trees, which are of value, in the forest. Another matter which they think is deserving of more attention than it is receiving is the danger of forest fires resulting from the trimming off of all limbs from the tops of trees.

Miscellaneous News of Lumber Matters

The Australian Commonwealth Government has placed in the estimates the sum of £2,000 for experiments in wood seasoning.

Wednesday and Thursday, Nov. 17th and 18th, the Supreme Nine of Hoo-Hoo, the members of the House of Ancients, and a number of prominent and active members of the order will meet at the La Salle hotel, Madison and Clark streets, Chicago, in an important conference on matters pertaining to the good of the order, and to outline a campaign for the ensuing year.

The following comparative statement of timber measured and culled has been issued by the Supervisor of Cullers' Office, Quebec, under date of November 3rd:

	1907	1908	1909
Waney white pine cubic feet	1,116,240	979,160	733,240
White pine	136,200	131,920	57,520
Red pine	8,400	8,200	8,680
Oak	399,920	524,280	537,160
Elm	212,360	86,440	107,960
Ash	25,880	4,400	520
Birch and maple	82,200	59,880	57,240

At a session of the Dominion Board of Railway Commissioners, held at Victoria on October 30th, an application was heard from the British Columbia Government to give the fire wardens such authority that they might be able to keep a closer watch over locomotives, in order to ensure the latters' equipment with the most modern apparatus to prevent the dissemination of sparks through timbered country. It also asked that the railway companies be instructed to appoint men to patrol their lines after the passing of trains through those districts in which the forests were thickest and most subject to conflagration. Owing to the fact that a Dominion Government official is engaged at the present time in inspecting the Great Northern engines operating in British Columbia to ascertain and report on what means may be taken to improve their equipment with the idea indicated in mind, it was agreed, on Commissioner Scott's suggestion, to allow the whole matter to stand over to the next sitting of the board at Vancouver.

As an indication of the business revival in the United States, the activity of the railroads is interesting. President W. C. Brown, of the New York Central & Hudson River Railroad, has announced that the management has entered upon a campaign of extraordinary expenditure to meet extraordinary traffic demands. The company placed contracts in a few days, he said, for \$25,000,000 worth of new locomotives, passenger and freight cars, and intended to spend \$60,000,000 more—\$85,000,000 in all—in reducing grades, straightening curves, and laying new rails, exclusive of \$50,000,000 terminal improvements in New York City.

"These expenditures," he said, "are absolutely necessary to meet the demands of business. The traffic records for the month of September and October up to date have exceeded anything in the company's history. The previous high water mark was for the first three quarters of 1907, just before the panic."

Gradual Improvement at Montreal

Splendid English Shipments. Shingles Quiet, Lath Firm, Hardwood in Excellent Demand

Montreal Office of the "Canada Lumberman."
November 11, 1909.

The local lumber market is showing a firmer tone and while no price changes of any note have occurred within the past two weeks, there is a gradual and quiet improvement to the general condition of the market. Along the water front, activity continues and will last for another week or so. The harbor sheds are congested at present with the heavy incoming cargoes, and much difficulty is encountered in loading lumber on board the vessels.

Some splendid English shipments are reported. Red pine is most largely exported and the demand is largely for the cheaper grades of merchantable stock, which is now employed where formerly No. 1 quality was used. While the English market is showing a tendency to improve, buyings are wholly for immediate use and are not extensive.

Report comes from the Ottawa district that several manufacturers have closed contracts for their supply of deals to the British market and at prices equally as good, if not better, than those obtained last year. The closing of these contracts is effected at an unusually early date and is regarded here as an indication of a better feeling in the English market.

There is a good demand for the better grades of lumber, but the feeling gains ground that the market for cull lumber must rule lower. The loss of the American market for this class of stock, which was occasioned by the high prices in effect two years ago, is keenly felt and manufacturers have accumulated extensive supplies.

A very quiet tone characterizes the shingle market and there is a feeling that manufacturers holding large stocks will have to reduce their prices before the spring. The field for eastern Canadian shingles is confined within smaller limits at the present time than was the case a few years ago. Eastern shingles cannot now compete with British Columbia reds further west than Kingston, Ont., and formerly dealers could market their supplies as far west as London, Ont. British Columbia reds now meet with considerable opposition in the American market, where Washington shingles are marketed with a decidedly improved quality. There have been no price changes in the local market.

Following are revised current wholesale lumber prices for Montreal:

1-in., 2-in. and 3-in. pine log run mill culls out	\$27.00 to \$30.00
1-in., 2-in. and 3-in. pine log run dead culls out	24.00 to 26.00
Pine "O" culls	13.00 to 14.00
Pine mill culls	17.00 to 19.00
Spruce flooring, sheeting, etc., No. 1	24.00 to 26.00
Spruce flooring, sheeting, etc., No. 2	19.00 to 21.00
Merchantable, spruce boards	16.50 to 17.50
2-inch merchantable spruce	16.00 to 17.50
Cull spruce boards	14.00 to 15.00
2-inch spruce culls	14.00 to 15.00
1 1/4-inch spruce mill culls	15.00 to 16.00
Spruce scantling, 3x 3, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 2x 3, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 3x 4, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 2x10, 12 and 16 feet	19.00 to 21.50
2-inch (scant.) x 9, fifth quality, N. Y. "outs"	16.50 to 18.00
Oak, 1sts and 2nds, quarter white	87.00 to 90.00
Chestnut, 1sts and 2nds, 1 inch	50.00 to 52.00
Birch, 1-inch log run, mill culls out	18.00 to 20.00
Maple, 1-inch log run, mill culls out	18.00 to 20.00
Basswood log run, mill culls out, 1x4 and up, winter sawn	24.00 to 26.00
Basswood log run, dead culls out, 1x4 and up, winter sawn	20.00 to 24.00
Laths, mill run, spruce, 1 3/8-inch x 3/8-inch, 4 feet	3.00 to 3.25
Laths, pine, No. 1	4.00 to 4.25
Laths, pine, No. 2	3.25 to 3.50
Laths, pine, No. 3	2.50 to 2.75
Shingles, clear	2.90
Shingles, 2nd clear	2.25
Shingles, extras, 1's	1.50
Hemlock boards, mill run	14.50 to 16.50
Hemlock culls	13.00 to 14.00
Merchantable, spruce boards	16.50 to 18.00
2-inch merchantable spruce	16.50 to 18.00
Spruce scantling, 2x10, 12 and 16 feet	19.50 to 21.50

Dimension timber is in fair demand at the present time. The prices for pine, spruce and hemlock range about the same as those of last year. On the other hand, Georgia pine and British Columbia firs are firmer and a comparison with the prevailing figures of last season shows an advance on British Columbia fir of \$1 and on Georgia pine of \$2.

The condition of the hardwood market as viewed by a majority of Montreal dealers was never better than it is to-day. All grades of hardwood are in splendid demand. Basswood at the present time seems to be gradually supplanting the much-used white wood. Birch, which has not been very much appreciated up to the present time, has come more into common use. It is very plentiful in the surrounding districts and on the whole it is of a good quality, and the splendid finish that is obtained by the varnished birch is bound to bring it into more general use. The New York market for birch is very firm and dealers anticipate a corresponding tone to be evinced in the Canadian market.

Laths remain firm at quoted figures. The hemlock market is quiet at the present time, but the dealers are anticipating a demand for dry hemlock. The tone of the pine market remains unchanged for the lower grades, with the better class of pine showing a bullish tendency. All grades of spruce are in better demand.

Montreal Men Studying the Sawdust-Alcohol Problem

The manufacture of alcohol from sawdust and other wood waste, was dealt with in a lecture by Mr. Ruttan, professor of chemistry in the medical faculty of McGill University, at a meeting held recently in Montreal. This subject has been absorbing the attention of manufacturers both in Canada and the United States for some years. It is claimed for the new process, that the cost of production of alcohol can be reduced to one-third or one-quarter of the cost of production under present methods. The importance of such a process to lumber manufacturers is also great, as it would, if successful, reduce to a minimum the present extensive waste which accompanies lumbering.

Professor Farrier, of McGill University, Montreal, has been experimenting for many years on the process of making alcohol out of sawdust. He was in Chicago recently and impressed several lumbermen in that city with the merits of his discovery. Two of the largest lumbermen in Ottawa, J. R. Booth and W. C. Edwards, are favorably impressed with the discovery. Professor Farrier says that alcohol can be produced from dry sawdust at a cost of 6 cents a gallon, and that one ton of dry sawdust will produce twenty gallons.

Personal News from Montreal

Mr. H. M. Price, of Montmorency Falls, Que., was in Montreal recently.

W. W. Humphries, of Messrs. Watson & Todd, Limited, Liverpool, England, is on a visit to the company's Canadian offices at Ottawa and Montreal.

Mr. H. Bourgouin will leave about the middle of December for Paris, France. Mr. Bourgouin will join his family and spend the winter season there.

Mr. H. E. Trudeau, Ville St. Laurent, P.Q., was in Montreal this week in connection with the sale of his lumber mills and timber and pulp limits on the north shore of the St. Lawrence river.

Mr. W. T. Mason is in Buffalo this week. While in the Bison City Mr. Mason expects to close an important contract for 1910 delivery, in the interest of his firm, Messrs. Mason, Gordon & Company.

Miscellaneous News from Quebec Province

Winter rates for lumber go into effect on the railroads on the 15th of November. These rates will mean in effect, an advance of two cents on the summer charges.

The failure of James J. Murphy, of Quebec, this week is noted with considerable surprise in local lumber circles, where this firm has always been well rated. Not long ago Mr. Murphy opened a lumber yard in Montreal with Mr. Hickey in charge, and a good business was conducted. The liabilities are placed at \$47,000 with the assets in the neighborhood of \$35,000. Quite a number of Montreal lumber dealers are among the creditors.

The feeling seems to prevail in Montreal that an organization of the lumber interests could be effected for the advantage of all concerned. If the Hoo-Hoo organization could be developed and extended in Montreal and in Quebec Province generally, and the manufacturer, wholesaler and retailer could be brought together, and made to realize the urgency of pulling together and sticking to their respective fields, a splendid work would be consummated.

Ten canal boats laden with lumber belonging to the Robinson, Edwards Lumber Company, Burlington, Vt., left Montreal on Saturday, Nov. 6, and were rushed through in order to enter the New York State canals before they closed for the season. The American canals close on the 15th of this month, and manufacturers have been rushing forward their final shipments during the past few weeks. Boats had to reach the entrance of the canals not later than the 12th of November in order to reach their destination by this route.

The plant of the Silsby Lumber Company, at St. George, Beauce, in the vicinity of Sherbrooke, Que., was recently visited by a disastrous fire which caused the destruction of the company's entire plant. Fortunately only a small portion of the lumber stocks were destroyed in the conflagration. The loss to the company is estimated at from \$50,000 to \$60,000, with insurance in the neighborhood of \$20,000. The Silsby Company is largely comprised of St. Johnsbury, Vt., capitalists.

The Canadian Northern Quebec Railway Company have made arrangements with the Canadian Pacific Railway Company for the delivery of lumber and other commodities at the latter's terminal points at Montreal, whereby a reduction in freight rates varying from one-half cent to one cent per 100 pounds is effected. This traffic was formerly handled and transferred to Montreal via the Canadian Northern Quebec lines and then switched to the Canadian Pacific Railway tracks, making a very round-about circuit. By the present arrangements it is brought in by way of Lachute, where it is transhipped to the Canadian Pacific Railway and from there it is sent on directly to Montreal.

Personal News and Business Notes

G. A. Balfour, a former manager of the Merchants Bank, Morris, has taken a position with the Rat Portage Lumber Company as auditor.

Nathaniel Curry, of Amherst, N.S., president of Rhodes-Curry, and head of the new car merger, has been elected a director of the Bank of Nova Scotia.

Frank Hawkins, Ottawa, Ont., secretary of the Canadian Lumbermen's Association, accompanied by Gordon C. Edwards, of W. C. Edwards & Company, Limited, vice-president of the association, spent two days in New York recently.

David Johnson, the well known lumberman of St. Andrews, N.B., has contracted to furnish the St. Croix Paper Company with 7,000,000 feet of logs during the coming winter. Mr. Johnson and his crew have started for their scene of operations at Spedenic lake.

It is stated that Mr. E. C. Whitney, head of the St. Anthony Lumber Company, is winding up his affairs in Canada and will retire to private life in Minneapolis, Minn. The big mill at Whitney, Ont., and the limits, now chiefly pulp and hardwood, have been sold to a Michigan firm.

Mr. Andrew Haslam has been appointed to succeed the late Mr. R. J. Skinner in the offices of provincial timber inspector, assistant commissioner of lands and registrar of voters for the electoral district of the city of Vancouver. Mr. Haslam was formerly supervisor of scalers, and is familiar with the work of the timber office. Mr. A. Hamilton will be supervisor of log scalers.

The W. H. Kelly Lumber Company, of Buckingham, Que., has quite a showing of sawed lumber along the C.P.R. track at the landing. Piles aggregating probably 300,000 feet b.m. will, if the present fine weather continues, be in good shipping order very soon. It is rumored that the company have secured a large contract for the supply of timber to the Montreal Harbor Commissioners.

E. W. Backus, of Minneapolis, president of the Minnesota & Ontario Power Company, and J. G. Sutherland, the company's sales manager, were recently in Winnipeg on their way to Fort Frances, Ont., to inspect the power works. Mr. Backus said that the paper mill at International Falls, Minn., would be in operation in February. It would have a daily capacity of 175 tons of ground wood pulp, 100 tons of sulphite and 200 tons of news print paper. The principal market would be in the middle States, from Detroit to Denver.

M. J. McVean, of the forest service of the United States Department of Agriculture, Washington, is visiting Winnipeg. Mr. McVean has come to Canada to make a study of the administration of public forest reservations, with particular reference to hydro-electric power concessions in such reservations. Mr. McVean's work in the United States forest service is largely concerned with the granting of such concessions. Mr. McVean bears letters of introduction from Philip P. Wells, acting forester for the United States Government, to Sir Daniel McMillan and the Lieutenant-Governors of the Provinces of Saskatchewan, Alberta and British Columbia, as well as to officials of the Dominion Government.

Obituary

R. J. Skinner, for many years timber inspector in British Columbia, died on October 20th after a long illness.

Alfred H. Hough, of Renfrew, Ont., a prominent and successful lumber merchant, died recently at the hospital at North Bay, of typhoid fever, aged 56. Mr. Hough took an active part in municipal affairs and had lately acquired extensive mining interests in northern Ontario.

James D. Finlay died at Joliette, Que., recently, aged 63 years. Mr. Finlay was superintendent of the Toronto Paper Company's mills at Cornwall for sixteen years. Other mills of which he had charge at different periods were: Albion Paper Mills, Holyoke, Mass.; Royal Pulp & Paper Company, East Angus, Que., and mills at Watervliet, Mich., and Joliette, Que.

The death of Edward Barnhill, of Fairville, N.B., occurred recently. Mr. Barnhill had followed the lumbering business all his life and was well known throughout the province. He was born in 1844 in St. John. The father of the late Mr. Barnhill established at Pleasant Point the milling business now conducted by John E. Moore. His son continued it, selling out to Mr. Moore a few years ago. The wife of the deceased was a daughter of Eben Sutton, who had mills at South Bay and Grand Bay, and who was connected with the firm of E. D. Jewett. A brother and four sisters survive. The brother is B. B. Barnhill, of Two Rivers, N.S., who is engaged in lumbering in that vicinity. The late Mr. Barnhill was a member of the Church of England and was also prominent in Masonic circles. In politics he was a Liberal. He was known as a keen man of business. One of his forms of recreation was hunting, and as a woodsman and hunter he had a reputation that was more than local. Death was due to heart disease.

South African imports of wood for seven months ending July 31st last, and for the same period in 1908, were as follows: wood unmanufactured, in the rough, 1909, £247,247; 1908, £207,187; wood planed and grooved, 1909, £55,273; 1908, £51,455; wood manufactured, 1909, £130,839; 1908, £145,662.

Lumber Matters in the Law Courts

Important Case Involving the Discontinuance of a Spur Track—Woodman's Liens

Discontinuance of Spur Track Facilities—A case of unusual interest to lumbermen, has been decided in a trial court of Manitoba before Judge Metcalfe in the matter of Robinson v. Canadian Northern Railway Company. The matter at issue was a claim on the part of the plaintiffs, who are lumber and fuel dealers in Winnipeg, for \$12,000 damages against the railroad company for failing to supply the plaintiffs with reasonable and proper spur track facilities, as had been ordered by the Board of Railway Commissioners. The case came before the Board of Commissioners originally on an application of the plaintiffs to have the company replace the siding which had formerly been there and had been taken away. The siding was originally constructed by the Northern Pacific & Manitoba Railway Company, and spur track facilities for loading and unloading had been afforded, until November, 1904, when the rails and ties of the spur track were taken away by the Canadian Northern Railway, which had taken over the road. The Board of Railway Commissioners had granted the order for the plaintiffs and directed that the siding or spur track should be constructed within four weeks of the date of the order. The defendants appealed from this order to the Supreme Court and the appeal was dismissed.

On October 27th, 1906, the plaintiffs brought the present action for damages on account of the order not having been obeyed. The railway company held that they were not liable for damages arising during the appeal which they had brought promptly and which was heard without undue delay. Judge Metcalfe, however, could not take this view of the case. He held that the plaintiffs should have their damages from the date of the breach of the statute which stipulates that reasonable and proper facilities shall be provided. He directed that judgment should be given to the plaintiffs with a reference to ascertain the amount of damages.

Death of Logging Train Engineer—An illustration of the variety of opinions that can be given by authorities upon a legal question is afforded by the case of White v. Victoria Lumber Company, recently tried on appeal in a full court of British Columbia. The case as it came originally before the jury was for the recovery of \$6,000 by the father and mother of a man who died from injuries sustained while in the employment of the defendants, for damages for his death. The jury brought in a verdict in favor of the plaintiff. In the appeal, Chief Justice Hunter and Judges Irving and Morrison constituted the court.

Deceased was killed by leaping from his engine when taking a train of eight cars loaded with logs from the camp to the mill at Chemainus. The company claimed that negligence on the part of the deceased contributed to his death and that therefore they were not liable. It was clearly shown in the evidence that the train was properly supplied with braking equipment. Chief Justice Hunter gave his opinion that lack of caution on the part of the deceased was the decisive cause of the accident and that for that reason a new trial would be of no use to the plaintiff. He therefore ordered judgment to be entered for the defendants. Judge Irving, however, held that the verdict must stand on the ground that there was evidence to justify the jury in reaching the conclusion that the deceased was not a competent servant and that the accident was the result of his incompetency and that the company had not taken sufficient care in selecting him. The duty of taking care to select competent servants was by common law one of the duties an employer owed to his workmen. Therefore Judge Irving was of the opinion that there should be a new trial. Judge Morrison took still another view of the facts. He believed that the evidence had been fully and ably canvassed before the jury and did not think that their finding should be interfered with. Accordingly, in his opinion, he would dismiss the appeal with costs.

Woodman's Liens—The case of Heaney v. Lobley was recently tried in a full court of the Yukon Territory on appeal from the decision given by Judge McCauley in favor of the plaintiffs. The plaintiffs (husband and wife) who were employed, the former to drive a team, the latter to cook, in a wood camp of the defendant, had ceased work at the defendant's camp on December 24th and proceeded to Dawson City, and had interviewed the defendant on December 25th. They claimed that until their interview with the defendant was concluded and a decision was reached that they should not continue in his employ, they were still entitled to payment by way of wages. Judge McCauley had upheld this claim. Upon appeal it was decided that the judgment for the husband, who was employed on day work should be reversed, and that the appeal against the judgment for the wife, who was employed by the month, should be dismissed.

A despatch from Winchester, Va., on Nov. 5th, said that the forest fires in that section continue to rage fiercely, and unless rain fell within the next few hours the property loss would be enormous. Thousands of acres of valuable timber land in the Great Northern Mountains had already been laid waste, and the flames were spreading in all directions.

THE WOODWORKER

Homemade Belt Shifters

It is a dangerous proceeding to try to move a running belt from one wheel to another by means of a portable shifting contrivance, yet one sees this sort of thing done very often, says the "American Lumberman." One day lately a lad endeavored to shift a 4-inch belt from the tight to the loose wheel by using the handle end of an oiling stick. The stick was caught under the belt and gave the arms of the boy a severe wrench, which laid him up for several days. In another instance a pole was used to shift an engine belt, was thrown downward into the wheel pit, where it doubled up in the spokes of the turning balance wheel causing the wheel to tilt and stop, necessitating several days' labor to level its bearings. Employees are often seriously injured by shifting belts in this careless manner.

First class belt shifters are on the market and easily obtainable, and enterprising and thoughtful owners of power plants install these devices, but many operators still take chances with crude contrivances of their own invention.

The accompanying drawings are given to illustrate various methods of moving belts on wheels. Fig. 1 is a shifting device which can be readily constructed with materials usually found about a ship. The shifter is all wood, the main supporting piece being designated (C). From this drop the brackets (BB), which are pieces of common wood slotted to permit the passage of the pin carrier or shifter (A). The carrier is passed through the slots and is provided with the strong wooden pins (DD).

Sometimes these pins are of wrought iron with the lower ends threaded and a nut and washer on either side to cause the pins to grip in the carrier. Hence with the belt between the two pins it is possible to shift the belt either way by means of the pole which extends through the right end of the carrier and down to the floor where it can be held.

Instead of the pole system of shifting, the wheel method is preferred in some shops. This plan of belt shifting with a homemade device is illustrated in fig. 2. The arrangement of the carrier for the pins is similar to that in the first illustration. The supporting brackets are the same. Instead of the shifting pole, however, a wooden wheel is placed on a spindle as at (E). A belt or rope (FF) passes over the groove in this wheel. The wheel is fitted with a pin at the back and this pin slips into a hole in the wrought iron piece represented by the blackened portion just at the rear of the wheel, whereby the shifter can be moved back and forth by manipulating the belt or cord from below.

Gearing also is employed instead of the pole or rope system of shifting. This mode of shifting a belt is presented in fig. 3. If a system of this character is to be employed a strip of gearing may be obtained at a metal working shop. In this system a flat row of gears, containing about twenty cogs, is secured with rivets to the end of the moveable shifting stick as at (G). Small bolts can be passed through the holes in the flat line of gears and bolted to the woodwork, or screws may be employed. The cogs should correspond in size with the teeth in the flat piece. The gear is fitted to a bearing just below the centre of the moveable strip of metal gearing, and by turning the movable stick carrying the belt shifting pins may be shifted as desired. In order to turn the gear a small grooved wheel is keyed on the shaft with the gear and this wheel (H) is worked by the belt (II).

Again, the gearing may be arranged as illustrated in fig. 4, some preferring this mode of moving the pin stick. The stick is placed in its correct position as before, and instead of fastening the flat gear piece on the under side of the shifter, it is fastened on the front side. Then the gear which is to work the strip of gearing is keyed to an upright shaft as

at (J). The shaft is fitted in strong supported bearings at the top and at the bottom. At the lower end of the shaft is a turning wheel in which turns the shaft, imparting the necessary motion to the gear and the belt stick is shifted accordingly.

Still another means of shifting the belt in a homemade device is shown in fig. 5. This consists in having the shifter stick arranged as before and furnished with the wrought iron lever movement. This lever extends with one arm at (L) to the other arm at (M). The lever or elbow is pivoted as shown, by which it can be swung as desired. The rod (K) is secured in the extending end of the lever and from this point it reaches downward to the floor. From the floor of the room, the workmen may operate the lever by use of this rod.

Sometimes devices for shifting the belts are rigged up according to the scheme in fig. 6. This plan involves the use of the two wheels (NN), which are placed on shafts. They are grooved for the roping (PP). A centre stand piece is fixed at (R), which receives the rope in the middle, as shown, so that when the right rope is drawn the shifter can be hauled over in that direction; when the left rope is pulled, the reverse action follows.

Prevention of Fires in Woodworking Plants

The prevention of fires in woodworking plants is a live subject in England, as elsewhere. A writer in "Timber" deals with the subject from a mill owner's point of view and gives some timely advice for all who have woodworking risks to consider. The writer expresses himself as follows:

The relative positions of mill owners, fire appliance manufacturers, and the fire offices, remain very much the same as they were when the author of these notes first took in hand the consideration of the most important subject of the prevention of fires in woodworking factories some four years or so ago, and resembles pretty much the form of a triangular duel, with the fire offices holding all the best weapons.

Much has been done to explain the circumstances and rouse interested parties to a sense of responsibility and activity. But the frequent and disastrous fires in sawmills and timber-converting factories generally have placed all classes of woodworking risks on the black list in the insurance world, with the result that for premium rates, perhaps, no other industry pays so high, while in not a few instances cover is withheld altogether, even at such a figure as four guineas per cent., while it has to be a very safe looking risk indeed to be taken at a guinea and a half per cent. in the London district and a guinea in the country. Owners and managers are wont to cry aloud at this apparent extortion, utterly unmindful of the fact that these figures are arrived at as the result of long experience and careful commercial calculations. No one is more keenly alive to the seeming exorbitance of such rates or equally more ready to come forward with reductions than the fire offices, but they have themselves and their shareholders to consider, and business to them is no more use than to any other concern or company if it is not going to be profitable. Powerful as the position is of the fire offices, it is none the less assailable, and with the very weapons they themselves offer, for, provided that means are employed to lower the hazard, not only are they willing to grant rebates of a substantial nature, but they will go farther and consider risks on their merits, to the manifest advantage of the insured.

Viewing the question from a mill owners' standpoint there is, of course, always that strong and inherent objection to incurring any expenditure which does not promise an immediate return; but if the trouble is taken to delve into the matter a little, only a very little below the surface, it will at once be seen how exceedingly short sighted this reticent policy is; and, still further, it can be readily and abundantly proved that a fire appliance installation becomes just as much a wage earner as any other item in the factory. Added to that there is the supremely conscious feeling of security against the chances of a fire overtaking them, with all its disastrous effects, loss of property, loss of business, and, perchance, loss of life. Now, in this latter respect, considering the vast number of fires in the woodworking industry, loss of life has been singularly absent, so that when one does occur and a fine factory is reduced to charred ruins and a scrap heap, and the business scattered into other eager channels, the matter is left to the owner to sort out with his insurance company or make the best of his reverses of fortune. When, however, life is sacrificed, the complexion undergoes a marked change from apathy to concern on the part of governing bodies, and we understand that county and borough councils have for some time past been considering the advisability of enforcing the introduction of approved methods of fire extinguishing appliances in sawmills and timber-converting factories generally, and this is probably the very best thing that could happen for the all-round benefit of everybody.

In many parts of the continent of Europe every woodworking factory is, under compulsion, equipped with one or other of the refuse re-

moving systems, and some approved fire fighting appliances, with the result that foreign sawmills have been rendered practically immune from danger—at any rate, to any disastrous extent—while in this country, excepting the few concerns that have adopted the sprinkler, and perhaps here and there a few buckets, utilized for every other purpose than which they were designed, timber works as a whole are at the mercy of some careless person whose negligence may cause a fine factory to be reduced to a heap of ashes in a good many instances during the night.

It is not necessary to make particular mention of the various forms of fire detectors and fighting appliances, each one of them possessing claims to advantage under varying conditions amply demonstrated when subjected to tests, and these often enough of the most exacting character.

One more point may, in conclusion, be pertinently raised, and this to the fire appliance engineers. Their manufactures may be seen in mills, factories, and warehouses of all descriptions all over the world, and many are the records of the losses averted by them, but the huge field of the woodworking industry remains unexplored and practically unexploited.

It seems, therefore, to us that a general effort should be made to unite the interests of the fire offices, the sawmill owners, and the fire engineers, and combine against the common enemy and devastating element, fire.

What Causes the Ridges?

Here is another band resaw problem, writes G. W. P. in the "Woodworker." We have a band resawing machine with 60-inch wheels, running 6-inch saws. The saws usually run fine in yellow pine No. 3 lumber. The puzzle to me is, they cut some lumber as per sketch. It looks

Fig. 1

Fig. 2

like washboards, only the ridges run at an angle of about 45 degrees from the saw cut. The lumber is all sawn on a band mill and is smooth and free from marks. In fig. 1 horizontal lines are saw tooth marks and diagonal lines the ridges on a 12-inch board. The saw—see fig. 2—runs smoothly and cuts straight. There is only an occasional board with these ridges, which are larger in centre of board and can hardly be seen at the edges. Now what causes the ridges?

Reducing the Waste

When it can be done without the extra cost being excessive, it is much better to reduce the waste incident to the manufacture of lumber than to devise ways and means for utilizing the waste, says the "Woodworker." In other words, the best way to utilize the waste is to get as much of it as possible into the products you are manufacturing from the lumber. Take, for example, a hardwood flooring plant. There is a big item of waste, running from 25 to 33 per cent., depending on whether the plant is making a variety of widths all at one time or trying to run only a few widths. When one or only a few widths in flooring are being made, of course the percentage of waste is higher because the greater the variety of widths the more opportunities there are for utilizing every inch of width in a given board. Lumber usually comes to such plants in a great variety of widths, as well as lengths, and it is in the ripping that much of the waste is made or saved. There are two chances to save. One is to have a sufficient variety of widths to utilize practically every inch in the width of the board; the other is to reduce to as small a fraction as possible the amount of allowance for jointing on the groove edge

and for making a tongue on the other. To reduce this to the lowest practical limit calls for the co-operation of the planer man and the rip sawyer, and it is generally up to the foreman in charge to see to it. Some are rather reckless in the allowance for the planer work and others cut it down so fine that only about 1-16-inch is allowed on each edge for the planer to do its jointing. In other words, the rough stock is only cut 1/8-inch wider than the net measurement of the finished piece of flooring. This is getting it down pretty fine, but it can be done with good machines and thoughtful operators, and done at practically the same speed as the more careless work, too. It is simply the difference between seeing how well it can be done and with how little waste, and of running along haphazard making plenty of allowance, thinking that 1/8-inch does not amount to anything. It is this 1/8-inch repeatedly wasted that amounts up to a whole lot in the course of a week's running, and it is worth working after as long as one can get it without having to slow down in the work so much as to make the cost more than it is worth.

The logic that applies here applies equally well to any stock, in the planing mill, furniture factory, anywhere, and it also applies to cross-cutting. In fact, it is up to the stock sawyer and the man in charge, although each may like to have plenty of elbow room to work on, but trained to careful manipulation they can effect quite a saving and the percentage of waste can be materially reduced. By careful manipulation in this way, or after this reduction is carried out as far as practical, there is not so much left to worry about in utilizing the waste, because the waste is not only smaller but is less worth while, and while a part of it may do for something, or else all of it go to the fire box, there is not much loss. There is enough difference to be had by close calculations and finer manipulations in getting out stock to easily pay the wages of a stock sawyer to do the work carefully. Try it once, and follow it up closely, even if it involves training in some new men to do the work. Wood is too valuable these days to waste in the old reckless manner, and there is really no excuse for lots of the waste that is to-day considered unavoidable in some woodworking institutions.

Concrete Steam Boxes

In building steam boxes for steaming bolts in a slack stave plant there are many methods of construction, each fitting the individual needs

Front View Plan of Concrete Steam Boxes

of the plant. Generally these boxes are made of wood, as the mill can supply the lumber from its own logs. Where these boxes are made of wood, it is necessary to rebuild them as often as once every two years. Indeed it is necessary to rebuild them oftener than that in many cases, one manufacturer stating the other day that he put in new boxes just a little over a year ago and now finds that he will have to rebuild again this year.

To avoid this constant expense and loss of time in rebuilding the steam boxes, cement has been resorted to in a few cases, with marked success. The cement steam boxes last an indefinite length of time and give equally as good results as those made of timber. The fact is, it is claimed that they give better results, because they are built tighter and hold the steam better. Thus a maximum amount of efficiency is obtained from the steam box entering the boxes.

The following description of a row of six cement steam boxes built by a slack stave and heading manufacturer in Indiana will give an idea of the construction of the cement steam box. The manufacturer stated that the six boxes could be built for about \$400 or \$500.

The general construction and form is shown by the accompanying illustration. The height is about 85 inches, the width of each box 72 inches and the depth about 64 inches. The doors are made of good lumber and fit into a small offset in the opening to the box so that they will fit snugly. Two holds made of iron and set in the cement on either side of the door opening hold a 2x4 plank which serves to hold the door in place.

There is in fact no foundation for the structure, with the exception that the walls are begun some 18 inches below the surface of the ground. The steam enters the boxes through a pipe placed in the lower part of the back wall. A rough wooden floor was built in these boxes, although this is not at all necessary.

The advantage of the cement steam box is that when it is once built it is built for all time, the constant heat and pressure of the steam having no effect on it.

CAMP DEPARTMENT

A Well Managed Lumber Camp

The internal economies and details of management of a well kept camp are matters which demand much more attention than outsiders would ever imagine. The pulpwood camp, No. 1, owned by the Dulmage Company on Pearl river, Ont., is a good example of a model camp. It is located three miles southeast by east of Pearl station on the C.P.R., and is composed of three camps. The dining camp is 26 feet wide, 38 feet long, and 13 feet 6 inches high. The kitchen is 12 x 26. Connected with this is a root-house 12 x 24, with door connecting kitchen and root-house. This root-house is supplied with everything necessary in the way of vegetables, and all in large quantities. The seating capacity of the dining room is for 75 men.

The kitchen is a credit to Mr. McBride, the cook. People who have seen this camp, wonder how this place can be kept so scrupulously clean, but Mr. McBride alone knows this. He is assisted by second Cook Mr. Cragg, and cookee, Mr. Sterling, and outside help, Mr. Morris. The sleeping apartments are of the same size as the dining hall and accommodate 68 men. There are at present 40 men in the camps. The ventilation of the sleeping camp is most worthy of note. It is provided by a ditch dug beneath the camp running out to rear of camp, and a window in the centre of the roof with six lights of glass 10 x 12. This window works on a pulley and can be opened or closed to suit the sleepers' convenience. Another window in the rear of the camp slides back and forth, with six lights of glass 10 x 12. There is a window opposite the door with six lights of glass 10 x 12. Still another window is placed over the sink, with ten lights of glass 10 x 12. Everything in the camp is brand new, and especially in the sleeping camp is the cleanliness noticed. Adjoining the camp is a large barn accommodating 12 horses.

All the men in this camp are well supplied with everything in the way of boots, clothes and tobacco. The men at present are busy preparing the camps for the winter. They have three crews of men cutting pulpwood, but will have more at a later date. They are cutting about 38 to 40 cords of wood a day just now, but will probably double this amount when the full force is at work. A doctor has been secured to attend the camp in case of sickness, but as yet he has not been in.

Extensive Logging in Michigan

Logging operations in upper Michigan will be conducted on an extensive scale this winter. In fact, there is every indication that more timber will be cut than any other season in recent years. Operations will be carried on briskly in every one of the fifteen counties of the peninsula. Much logging railway has been constructed in various portions of the region the last few months, and with the exception that there is a scarcity of labor the opening of the season finds the lumbermen better prepared for extensive work than ever. Already a large number of camps have been established, and as fast as men can be procured they are being sent to the woods.

Logging has been an important industry in upper Michigan for several decades. Naturally tremendous inroads have been made in the supply of timber, and there is very little white pine remaining. But it is a wholly mistaken idea to imagine that the region has practically been denuded of its forest growth or that it is even reaching the end of its wooded wealth. The resources still are of vast extent. A generation hence will find logging in progress in timber now standing, and by that time new forests will be available. Lumbermen and land owners are beginning to see the great value of reforestation and conservation, and forests are not being despoiled as they have been. More careful methods of logging are coming into vogue and more attention is being devoted to the cultivation of new growths of timber.

Lumbermen Scarce in Maine

The annual round-up of woodsmen to supply the lumber camps in Maine's lumber district is now under full headway. The various employment agents cannot get enough applicants to fill the large orders they have received from lumbering companies. The scarcity of men is more noticeable than in past years and at the present time a great many men are engaged in picking potatoes. The potato crop is much better than for years, and consequently a large number of men are at work in the fields getting good wages and are not anxious to be any nearer the pole than at present. Much work is being completed just at present by the railroads, many hundreds of men being employed. These men also receive good wages and would rather work for the railroad than go to the woods.

The scarcity of men has the effect of making labor more valuable and the men who go into the woods are receiving about \$2 more per month than they did last year. This advance in wages does not seem to draw them any better, however, and the agents of the companies, who

hire labor are forced to do much hard work to get enough men to fill the various crews.

Boston sends many men annually into the Maine woods. These men are not, as a rule, experienced woodsmen, and the employment agents say that a local man is worth three of the "imported variety." The Boston men do not receive as much pay as the Maine men because they cannot do as much work in that line. The class of men who do work in the lumber district is continually changing, and now there are 50 per cent. less Maine men go into the woods than was the custom in the old days. Then lumbering was about the only sort of work open to men who were out of steady employment. Swedes, Russians, Poles and province men make the general run of a camp crew now, where in the old times the woodsmen were mostly Americans and Irish.

It is understood that at least one of the big lumbering companies will not cut more than half as much as it did last year. The company is overstocked with logs and will be unable to handle as large a cut as usual. Present indications, however, point to a large cut this winter and operators are confident that conditions will be favorable to the lumbering interests.

Historic Mill Being Dismantled

A press despatch from Medicine Hat, Alta., says: "Wm. Rutherford has sold out the last of his mill property in the Cypress Hills. The dismantling of the mill will recall to many old timers the first mill erected in the Cypress Hills country, which involved an expenditure of about a quarter of a million dollars on the part of Louis Sands, the great Michigan lumberman, and gave rise to the notorious Rykert scandal. It will be remembered that three sections and a quarter of timber limits were bought by Sands in 1882 from Rykert, after the latter had obtained them from the government of that day. Sands' confidential agent only got as far as Winnipeg to inspect the timber, and through circumstances which are still green in the memory of many, sent in from that point a made to Sands for \$200,000. Three additional sections were brought most favorable report of the limits, resulting in a sale of them being from the C.P.R. also, but they only cost \$10,000. Sands set up a mill on the property just east of Elkwater lake, shipping the plant as far as Walsh, to which station the C.P.R. line had been constructed. The mill was worth \$25,000, was 112 feet long, and had a capacity of 40,000 feet of lumber a day.

"Logging roads were cut through the brush and camps erected, of which traces still exist. Mr. W. N. Adsit's father went out to take charge in 1883, and after going over the limits thoroughly, advised that no more money be wasted on the proposition, the timber being entirely too young to repay the labor of cutting. The outfit, however, was operated at a loss for several years before being abandoned. In 1889 W. N. Adsit made an arrangement to secure the mill himself for the winter, but found that out of 100,000 feet which he cut, not 2,000 feet of the lumber attained a width of one foot. In 1892 the plant was shipped east.

"It was about 1896 that William Swibert established the present mill, on top of the mountain, which a few years later was taken over by the Rutherford Bros., and was afterwards conducted by Wm. Rutherford, whose experience, however, was quite the reverse of that of the Sands people financially. Mr. Rutherford purposes moving his family to Calgary, and engaging in the lumber business in the north."

Messrs. W. Thompson & Sons, of Thurso, Que., are operating again this season on the McGurn property. They expect to take out between 6,000 and 10,000 pieces of sawlogs, ties, etc. The logs, it is presumed, will be cut at Gillies Bros.' sawmills. Messrs. Gillies Bros. will probably do a little logging on some lots they have in Portland West. They will take out four or five thousand sawlogs. Part of the cut will be banked on Wright creek and part on Priest creek below Holland's dam, or whatever is left of that structure.

The Rat Portage Lumber Company will only operate two camps on the Lake of the Woods during the coming logging season. These have already been sent out in charge of Messrs. Blakie and McMillan respectively. The company are aiming to save their standing timber as much as possible and with this end in view have purchased large quantities of logs from other sources. In addition, they have a large quantity of logs on hand. On this account the amount of timber that will be required to be cut on their Lake of the Woods limits this winter will be greatly lessened.

The logging camps of the United States Pacific coast are looking for more men and are finding some difficulty in securing them. Logging operations this winter are expected to be large and it is feared that it will be a very difficult matter to secure an adequate number of lumberjacks

A Departure in Planing Machine Construction

The exacting requirements of modern planing mills in rapid production and high grade of finish, have necessitated the development of many new features in planing machines and the abandonment of many of the older features of construction that had previously been accepted without question.

One of the greatest troubles in obtaining perfect cutter head work was due to the great difficulty in maintaining the proper condition in the cutter head journals. Under high speed of planing machine cylinders and the increased size of belt necessary for fast feed, the wear of the journals was very rapid and soon destroyed the accuracy of any adjustment. The lubrication of long cutter head boxes was also a difficult matter. Then, too, vibrations and jars thrown into the cutter heads by the action of the belts upon the pulleys direct upon the shafts, were hard to eliminate. Frequently the lacing of the belt left a mark upon the stock each time it passed over the pulley. The difficulty of making two belts run exactly alike was also a prominent cause of dissatisfaction. When it is considered that as slight a difference as 1-100-inch in the diameter of cutter head pulleys would mean a difference of 10 to 12 feet in the amount of belt travel at the ordinary planing machine speeds, it will be seen that the slippage between the belts was a serious factor.

Belting the cutter heads upon the front or operating side of the machine was also dangerous, and especially so in the modern machine in which the operator must work about his cutter heads in the process of truing them while they are running full speed. Many serious accidents have occurred to operators through the breaking of belts at this time, or while making other adjustments that take the operator within the line of belting.

In any machine, convenience and accessibility on the operating side

plating the installation of planers will do well to look into this new type of machine.

Trade Enquiries

The Dominion Government Trade and Commerce report contains the following enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1614. Lumber and doors.—A South African firm desires to be placed in touch with the Canadian shippers of all kinds of lumber and doors. Quotations to be c.i.f. Durban.

1628. Hard maple lumber, maple log, hickory logs, maple mangle roller blocks.—One of the largest firms of timber merchants in Liverpool, England, desires to hear from Canadian shippers of the above timber.

1657. Boxboard.—A London firm invite correspondence and quotations from Canadian manufacturers of boxboards who are in a position to undertake export business to South Africa.

1659. Lumber, flooring and ceiling boards, pine doors and shelving.—A South African firm of commission agents desires to be placed in touch with Canadian shippers of lumber, flooring and ceiling boards, pine boards and shelving. Quotations to be f.o.b. Montreal and St. John.

1670. Maple flooring and flooring blocks.—A Liverpool company of timber merchants have a large demand for maple flooring and flooring blocks, and wish to get in touch with Canadian manufacturers who can supply these goods.

1679. Wild cherry wood.—A Belgian firm desires to correspond with a Canadian firm in a position to export wild cherry wood.

1682. Maple flooring blocks.—A South Wales firm wishes to pur-

The Woods New No. 19 Planer and Matcher

allowing the removal of cutter heads, taking out broken stock or defective pieces, etc., are desirable qualities. To secure these and to eliminate belting upon the cutter head direct, also to clear the front or operating side of the machine for accessibility, and to reduce belt troubles, the S. A. Woods Machine Company, Boston, U.S.A., have developed the one side coupled drive, in which one belt only is used for each cutter head. These belts are placed on the back side of the machine, each driving a cutter head pulley supported by boxes entirely independent of the cutter head itself—connection between the two being made by a flexible coupling. This coupling, they claim, absorbs all the vibrations transmitted to the pulleys by the belting, and leaves the journals of the cutter head free from the strain of the belts or other disturbing influences. It also permits the use of short journals upon the cutter head, which are efficiently lubricated by improved oiling devices, and can be maintained in ideal running conditions with ease. Another important feature of this design is the possibility of uncoupling the head from the driving spindle without disturbing the belts, thus detaching the cutter head instantly from the driving spindle and leaving it free to be turned when setting up.

Driving a planing machine from one side is a radical departure from the construction followed for so many years. This arrangement, however, the company claim, has proven most satisfactory. There are many other new features embodied in the Woods No. 19 planer and matcher which assist in the rapid production of highly finished lumber. The machine is built in two sizes, to work 9-inch or 15-inch wide by 6-inch thick. The S. A. Woods Machine Company, of Boston, are known as the planer specialists. They have concentrated their energy in the development of wood planers, and the No. 19 is the outcome of this specialization, illustrating that a high state of efficiency may be reached through concentration rather than by spreading over a wide field. Millmen contem-

chase supplies of maple flooring blocks and would like to receive prices from Canadian exporters.

1693. Wood blocks.—A firm of manufacturers are buyers of planed blocks of white wood, which must be free from knots or other defects. Sizes 8 inches long by $\frac{5}{8}$ -inch or $\frac{3}{4}$ -inch square. Prices desired from Canadian manufacturers for shipments to Liverpool or Manchester.

1699. Timber.—A South African firm desires to be placed in touch with Canadian shippers of timber, flooring and ceiling boards, and pine doors. Quotations to be c.i.f. East London and Delagoa Bay.

1704. Agency abroad.—A Bristol manufacturer's agent desires to represent Canadian exporters of wood products, including brush handles, blind rollers, Venetian blind laths, wood dowels, birch, beech and maple cut to all sizes, box shooks and furniture in the rough knocked down and delivered c.i.f. at Bristol.

Timber Imports into Australia

From unofficial records carefully collated and compiled it is stated that the gross imports of timber into Australia during the year ended June 30th, 1909, reach 114,543,000 superficial feet, or over 10,000,000 more than in 1907-8. Oregon pine was 11,200,000; kauri, 990,000; New Zealand white pine, 2,050,000; and Pacific pine (logs), 5,050,000 feet; in round figures, more than in the previous year. The consumption of all over-sea timbers recorded was 98,858,000, about 2,053,000 superficial feet more than in 1907-8 and within 4,057,000 of the record in 1906-7. Stocks in the aggregate at the end of the fiscal year were the largest recorded, but Baltic flooring, etc., figured over 4,300,000 superficial feet short of the total for last year. The great increase is in American products, being in round figures 5,000,000 Oregon, 5,100,000 white pine, and 6,000,000 superficial feet Pacific pine in excess of the imports for the previous year.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED-LUMBER, ETC.

Hard Maple

WANTED—80,000 FEET OF NO. 1 COMMON and better 1½ inches Hard Maple. Apply, Box 855, CANADA LUMBERMAN, Toronto. 24

Logs Wanted

BIRCH AND MAPLE LOGS DELIVERED at railroad or convenient for water shipment. Highest price for right quality. Box 850, CANADA LUMBERMAN, Toronto. 24

Soft Elm and Birch

WE ARE IN THE MARKET FOR A FEW cars of the following dry lumber:—2" soft elm No. 1 common or common and better, 6/4 and 8/4 birch, No. 1 common or common and better. Address, LONDON LUMBER COMPANY, London, Ont. 24

Wanted

WILL PAY GOOD CASH PRICE FOR 1" Coffin Elm, 1½" 2" and 3" Mill Run Elm. Box 830, CANADA LUMBERMAN, Toronto. 25

Investment Opportunity

INTEREST IN SECURING GOOD HOLDINGS of timber tributary to Lake Temiskaming is growing. Of course the reason is obvious—transportation facilities are good and the mines and towns of Temiskaming are growing apace, producing a market on the ground. We can show you why you will make money buying timber tributary to Haileybury and manufacturing it there. Write us. CYRIL T. YOUNG, Chairman Publicity Department, Haileybury, Board of Trade.

Valuable Timber and Pulpwood Limit

FOR SALE, WITH SAW MILL AND PULPWOOD ROSSING MACHINES in full operation. Well situated on the North Coast of the St. Lawrence River and having great facilities for shipments. For particulars apply to Box 64, VILLE ST. LAURENT, near Montreal, Que. 23

Timber Lands and Saw Mills for Sale

The UNDERSIGNED Offers:—

Parcel 1. Ste Anne des Monts property situated on the South Shore of the St. Lawrence River, Gaspé County, Quebec, about 1000 acres of Seignior or Fee Simple lands—at the mouth of the Ste Anne des Monts upon which is located a well equipped lumber and shingle Mill with ample steam power, electric lighting, with a capacity of 25,000 feet of Lumber and 125,000 to 150,000 pieces of Shingles each ten hours—also Dwellings for workmen, Stable, Store houses, Repair Shops and Mill Pond and storage facilities for logs.

About 300 square miles of licensed timber lands upon which disinterested Explorers make a minimum estimate of over 350 Million feet of saw logs, principally spruce, fir and cedar, and 595,000 cords of Spoolwood, and Pulpwood.

All on drivable streams an average of not over 30 miles to Mill Pond.

And all shanty plant tools and equipment on the property.

Parcel 2. What logs are now in the river estimated 3 Million feet board measure.

Parcel 3. Grande Vallée property situated about sixty miles east of Ste Anne des Monts on the South Shore of the St. Lawrence River in the County of Gaspé, Quebec.

About 54 square miles of Seignior or Fee Simple lands and 100 square miles of Licensed lands.

A new Mill consisting of a steam feed Circular saws—1 Mershon Horizontal resaw—with all subsidiary Machinery and ample steam power and electric lighting.

Capacity 50,000 to 75,000 feet of Lumber each ten hours—A practically new Mill for sawing shingles and railway ties.

With ample steam power and electric lighting to produce 125,000 to 150,000 shingles each ten hours.

All the shanty plants, tools and equipment on the property.

On the timber lands, disinterested Explorers minimum reports are 100 Million feet saw logs, principally spruce, fir and cedar and two hundred and forty five thousand cords Pulp and Spool Wood.

Deseronto, Ont.

British Columbia Timber Limits and Going Sawmill Concerns

To close an estate the Advertiser offers for sale

39,800 Acres of Selected Timber Lands

in the interior of British Columbia, very accessible, and reported upon by Government Cruisers to carry over

600,000,000 ft. B.M. of High Class Timber

together with two first-class sawmills, now operating, which have been erected and equipped at a cost of over \$200,000, and which have a combined capacity of over twenty million feet B.M. per annum, and are now doing a very profitable business. Also logging plant, horses, buildings, franchises, charters, steamers and all operating equipment, for the sum of \$600,000.

This price is considerably less than the present value of the standing timber alone, which in six years will undoubtedly have a stumpage value of over \$5.00 per thousand, or over \$3,000,000. Over \$100,000 profit per annum can be realized from operating under present conditions. This offers

the best operating and timber holding
investment in Western America

and will bear the most stringent investigation. Terms of payment extending over a number of years will be given to responsible parties. Only those in position to handle need apply. Write in first instance to

Review of Current Trade Conditions

Ontario

The demand for the better grades of white pine continues strong and prices are firmer. 1½-inch No. 1 cuts and better are much firmer at an advance of about \$5, the present prices at Toronto being from \$58 to \$60 for car lots, and 2-inch are also higher by about \$3 to \$5, selling at \$60 to \$65. No. 2 cuts are also feeling the benefit of the improvement in demand and are selling at \$46 to \$48 for 1½-inch, an advance of \$2 over the prices a fortnight ago. 2-inch No. 2 cuts are about \$3 higher at \$50 to \$54. The improvement has extended to No. 1, 2 and 3 cuts, which bring \$38 to \$40 for the 1½-inch variety, and \$44 to \$48 for the 2-inch, an advance of from \$2 to \$4. Common and dressing is holding well for all sizes, with a firmer tendency for 1x6 and 1x12. Box and common are also steady generally, but firmer for 1x10.

The demand for Ontario lumber in the northern States continues good with but little change. There is a scarcity at present of all thicknesses of shop lumber in Ontario and enquiries have been received during the last fortnight for shop lumber which could not be sold earlier in the season. Good sidings are exceedingly scarce. The market conditions for pine, hemlock and lath are all very promising. A few lots of hemlock are being offered at bargain prices, but the quantities are small and so do not have much effect upon the market, but they give the purchaser something to talk about and so prices are not very buoyant. Large firms, however, are not cutting prices at all. An interesting feature of the present market conditions is that Ontario producers of hemlock can get into the United States market and obtain prices as good and in some cases better than those that can be obtained locally. This shows that so far as the Americans are concerned they have advanced prices of hemlock sufficiently to allow Canadians to surmount the duty. An improved demand for hemlock is the cause of this. All the large cities in the United States, and even in Ontario, are breaking records in building returns, and much of this class of lumber is needed. A large manufacturer, speaking of the situation, says, that while hemlock is a little unsteady and some people at the present time are bearing the market, next May there will be a good deal of activity and a decided stiffening up of prices.

Many purchasers of shop lumber and intermediate grades of pine are now on the market who a few months ago were diffident and believed that there would be no scarcity. 1x4, 5, 6, 8, 10 and 12-inch are getting pretty well cornered in common and dressing quality. 1x5 and 6-inch are reported to be practically out of the market. 4-inch is in fair supply. 8-inch is a little long but 10 and 12-inch are low. There is quite an advance also in Norway and it is believed that before long it will occupy the position upon the market to which it is entitled. Lath is still holding well and recent advances in prices for export have been maintained. There is a decided scarcity of labor in the Georgian Bay district. Good men are almost impossible to obtain. Wages are correspondingly high and almost anybody who applies can secure a position. Ottawa reports show that the lumber trade still continues quite brisk. Some of the large manufacturers have already closed contracts for their next season's cut of deal, and prices are reported to be considerably higher than those of last year. White pine in particular is very strong, and spruce is higher than it was a year ago. Low prices for box board are tempting a good many buyers in to the market. Pine strips and sidings, especially the better class, are very firm.

Eastern Canada

The manufacturing season is drawing to a close in New Brunswick and preparations for the winter's work in the woods are taking everyone's

attention. The indications are that the winter's cut in the woods will be about the same as last winter. The only noticeable trade feature is the continued dulness in cedar shingles for export to the United States. During the summer the demand fell off considerably and there has been no recovery since then. This is probably an aftermath of the high prices last spring. St. John manufacturers, however, are selling shingles at prices which give no cause for anxiety. Quotations just now for cedar shingles are about \$2.75 to \$2.85 on dutiable "extras" and \$2.25 to \$2.35 on dutiable "cleans," f.o.b. schooner St. John.

Spruce frames 9-inch and under at Boston are quoted at \$23 to \$23.50. A few firms who are holding for high prices are making sales at the latter figure, while others asking \$23.50 have been accepting \$23. The closing down of many of the mills has resulted in a considerable reduction in the quantity of spruce produced during the last few weeks. There is not much interest taken by buyers in the market for random. Narrow sizes are quoted down to \$20.50. Larger sizes are firm. Matched spruce boards are quoted at \$21.50 to \$22. At New York the prices for eastern spruce are steady but there is not much business offering. Arrivals have been numerous and reports from mill points indicate that stocks are ample. Manufacturers, however, are believed to be holding off for lake shipments. Shingles at Boston are quiet and prices are easy. Cedar extras have been sold at \$3.50, but most of the dealers want \$3.65 and some are holding for \$4. Lath are in good demand and firm at \$4.25 for 1½-inch. There is a good demand for 1½-inch and prices are firm at \$3.75 to \$3.80. Some dealers are asking \$3.90.

Western Canada

The price of logs in British Columbia is just enough to allow a small margin. A good run of fir logs brings from \$8 to \$9; spruce, \$9, and cedar \$8 to \$12. Merchantable lumber is selling at \$11 to \$11.50. The logs quoted average 35 per cent. No. 1 and will cut at 25 to 30 per cent. clear lumber, which should bring about \$16 per thousand. The margin, therefore, from the logs is about \$7, to pay for conversion into lumber. The demand for lumber is still good, but prices generally are below actual value. Shingle prices are unsatisfactory. They can be bought now as low as \$1.60 green. Stars are down to \$1.55 on Puget Sound, so that British Columbia shingles with a 50 cents duty are shut out of that market. Bolts now cost \$5 to \$5.20 a cord delivered at the mill, so that material costs the manufacturer about \$1 a thousand and the cost of manufacture is about 60 cents a thousand.

Some logging operators claim that logs are going into the water too fast. During September the logs scaled on the British Columbia coast totalled 56,000,000 feet.

United States

Chicago reports state that the city trade is still good but that the country trade is only fair. Northern pine at Chicago is in fair demand for the upper grades, with prices much higher than they were a few weeks ago. Inch stock is in especially good demand with prices firm and showing a tendency to advance. At Minneapolis new lists on white pine have been issued and the demand is good. All grades of 4 and 6-inch siding have been advanced \$1 a thousand. Higher grades are growing scarce and new stock is needed. At Buffalo the demand for white pine is good, though some dealers declare it is unsteady in all but the higher grades. The stocks which will be carried over into the winter are of good size. Car material is still the most sought after at Chicago and an increasing demand is appearing for timbers for railroad use. There is a good eastward movement also for fir for ships' decking. The

Cleveland-Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

demand for western pine at Chicago continues good. Southern pine is unchanged and the situation is unsatisfactory to both manufacturer and wholesaler.

Red cedar shingles at Chicago are in poor demand and prices are low, lower in fact than they have been for three years past. Clears are quoted at \$3.17 and stars at \$2.69. White cedars are moving slowly with prices unchanged. Lath are steady and firm. Buffalo is receiving large quantities of shingles and since lake shipments have become unsafe, 10 cents has been added to the price of Pacific coast shingles. The preference for 16-inch lengths of red cedars continues. Some white cedars are arriving from Canada at lower prices. Extensive stocks will probably be carried this winter and the local consumption for building purposes at Buffalo promises to be heavy.

The hardwood situation at Chicago is promising. All dealers state that October was one of the busiest months that they have had for a long time past. Many of the hardwood firms at Chicago are short on the principal staple items. Southern stocks are arriving very slowly. Plain white oak and plain red oak are in strong demand and offers of stock are more freely made, although the supply is not increasing materially. The best grades of 1sts and 2nds are bringing good prices. Quartered oak is in good demand for 1sts and 2nds and No. 1 common. The demand for basswood 1sts and 2nds is good. Birch is also in good demand and prices are firm. The same is true of maple. The maple flooring manufacturers of Chicago have plenty of orders ahead. At Minneapolis the demand for hardwoods is excellent. Oak is strong for both plain and quartered.

The cooperage situation remains practically unchanged although a few unexpected orders and inquiries have been turning up at Chicago both for tight and slack barrel stock.

Great Britain

Reports from Liverpool state that the slight improvement in trade which had appeared was being maintained, but that the volume of trade was still poor. There is really no life in business at Liverpool, transactions being restricted to the satisfaction of the buyer's most pressing wants. Spruce deals from New Brunswick and Nova Scotia, however, have been well maintained in price. The few cargoes to arrive are firmly held. Stocks of spruce deals are fairly plentiful, the only noticeable scarcity being in the longer deals, especially 8 x 9 and 11-inch. There is also a scarcity in 2½ x 7-inch at several of the west coast ports. Imported boards are becoming very scarce. British importers do not seem to yet realize their situation in connection with Canadian pine goods. Prices for next year have been advanced by the Ottawa manufacturers, who are greatly strengthened by the demand from the United States, and British importers may have to pay whatever price is asked.

At London there is a fair amount of trade, comparatively speaking. The tone of the market continues to be good and prices are fairly well maintained. At Churchill & Sim's recent auction sale 4 x 16 prime Oregon unsorted could not get beyond 1s. 6d. 1st broad Quebec pine went at £31, with the shorter lengths at £30, 3rd Montreal 3x9 at £14 and £13, with 8-inch at £12 5s., and 7-inch at £12 15s. 3 x 11 3rd Quebec spruce went to £10 5s., and 10 and 11-foot 3 x 9 ditto at £9 5s., 3 x 12 2nd Quebec at £10, 3 x 7 2nd ditto £8 10s., and unsorted ditto at £8 5s. Quebec 1st birch only made 57s. 6d., and planks 1s. 4d. and 1s. 3½d. Some nice stocks of floorings were offered and produced satisfactory prices.

Timber at Manchester continues steady and it is believed that a turn for the better has taken place. The import season has not yet closed. Several spruce cargoes are still to arrive with the option of Manchester as the port of discharge. At Southampton the trade is very dull. Imports at Bristol consist almost entirely of liner parcels.

Interest in the preservation of our forest and other natural resources is rapidly increasing throughout Canada, according to Mr. James Lawler, Toronto, secretary of the Canadian Forestry Association, who has just returned from a two weeks' trip to the southwestern part of Ontario, where he lectured in Berlin, Sarnia, Walkerville, Chatham and London. These illustrated talks on the state of our forests and what should be done to protect them were well attended, and were held in collegiate institutes, town halls, Canadian Clubs and Board of Trade rooms. Leading citizens took part in the discussion and held that prompt measures should be taken to preserve and perpetuate our forests.

A Bellingham, Wash., report says that an important test of the export laws of British Columbia and the import duty on timber into the United States is being made by lumbermen of that city and British Columbia. As near as can be learned the evasion of the British Columbia export tax is being made by squaring the timber by sawing off slabs, which, it is held, permits the shipping from that country without payment of the export tax. In that condition it is also held that no import duty can be charged by the United States government. The experiment and the ultimate outcome is being watched with great interest by lumbermen on both sides of the line.

Market Correspondence

Ottawa Valley News—Brisk Trade in English Deals

Ottawa, Nov. 11.—November witnesses a continuance of the brisk trade reported last month. Contracts have been practically closed with J. R. Booth, Hawkesbury Lumber Company, and the W. C. Edwards Company for the next season's cut of deal. All the deal in the Ottawa Valley not now disposed of to the English buyers will be picked up in the course of another week if one may judge by the anxiety to secure the stock. While always reticent about telling exactly the selling prices of deal the Ottawa manufacturers assured the "Canada Lumberman" that the product went at an important advance on last year's figures. The white pine stock was especially strong. Enquiry shows that spruce lumber is also firmer than a year ago, and that the 1910 cut will bring a considerable sum more than the cut of the past year.

The favorable situation as to box board from the purchasers' standpoint is attracting many offers, and the prospect is that very little of that stock dry enough to ship will be left by the opening of navigation next spring. The remaining week of navigation this season promises to be the most active in lumber movement for several years. The middlemen have enough confidence in the market to stock up heavily for the winter. Some of the better classes of pine strips and sidings are practically all sold and prices are exceedingly firm. Frequently the buyers have to go to dealers to be supplied. Speculators expect to make a profit on lots of box board bought at from \$16 to \$20 and one-inch shipping culls selling at from \$20 to \$25 according to width. The 6 and 8-inch sizes are pretty well off the market at this moderate price. Holders of the low grades of lumber expect to see them advance as rapidly as the upper classes before long.

Shippers are beginning to realize the loss from the suspension of sawing operations during the high water in May. The lumber sawn in that month is always dry enough for early shipping, and although the mills have nearly all made up in quantity for the loss on account of the steady supply of water for operation and driving logs that followed, the movement of dry lumber has been greatly hindered. There is every prospect for the mills being able to run until the end of November, and with a few exceptions they will take advantage of the chance.

Lumbermen attach significance to the retirement of the St. Anthony Lumber Company from the field of operations. The company closed its mill at Whitney the last of October after 14 seasons of business. Its output is estimated at nearly 40,000,000 feet this season, and it has been about that for many years. Its white pine was among the best turned out in the Ottawa valley, and with the discontinuance of the industry the lumber most in demand becomes all the scarcer. The company produced very little deal in recent years as it made more money by catering to the American demand for good sidings. English customers who knew the stock well also bought sidings from the St. Anthony Lumber Company at better prices than could be made out of the same lumber sawn into deal. The white pine on the limits is pretty well exhausted but there is an abundance of hardwood which will later be put on the market.

Lumbermen's agents are unable to supply the demand for experienced shanty men, and those who can be relied upon to stay in their places all the season after their transportation has been paid. R. Carling, head clerk of the Carney Lumber Company, of Massey, who was in the city this week, states that 75 camps in the Georgian Bay district are short of help and that 6,000 more men are needed there. The Soo Lumber Company, which ordered 100 hands from Ottawa, was able to get only 19. Their agent says that he could place 300 men a day in all the camps now looking for men. Wages are still around \$26 and \$28 per month for good men. Those who go on railways get \$8 or \$10 more, and that has reduced the number available. The James MacLaren Company, of Buckingham, Que., have enough logs ahead to permit of curtailing the coming winter's cut, but this affects chiefly the jobbers of the district.

Ottawa valley lumbermen are interested in the efforts for the Canadian Manufacturers' Association to alter the purpose of the Insurance Act passed in the last session of the Commons, and which will come before the Senate this session. The bulk of the lumber in the Ottawa valley is insured in mutual companies at from 20 to 35 per cent. less than would be charged by tariff companies. Under the present Dominion insurance law the reciprocal insurance is not practicable in Canada and the lumbermen are obliged to go outside the country for it. Consequently there is a lot of lumber covered by the New England mutuals, and to keep them out would impose a hardship. Some years ago the mutual insurance scheme was so popular in the Ottawa district that an effort was made to organize a mutual company. The men behind it finally formed the Ottawa Insurance Company, but there is still a desire to provide a means of mutual insurance among the lumber interests. Mr. Peter Whelen, president of the Ottawa Board of Trade and manager of the Shepard & Morse Lumber Company, and W. H. Rowley, of the E. B. Eddy Company, also vice-president of the Canadian Manufacturers' Association,

Eventually

Why not Now?

SALES OFFICES AND REPRESENTATIVES :

REGINA, Medical Hall Building	-	-	-	-	-	C. BRUCE
WINNIPEG, Canadian Northern Building	-	-	-	-	-	F. A. SHORE
TORONTO, Canadian Northern Building	-	-	-	-	-	H. A. ROSE

are strong opponents of the features of the Insurance Bill which aims at blocking the progress of mutual insurance.

The E. B. Eddy Company, of Hull, has been confronted with a resolution of the Hull School Commissioners withdrawing the tax exemption on the Eddy pulp and paper mills which they have enjoyed for 20 years. The Eddy plant is assessed at a million and a half. The Public School Board (Catholic) of the city would derive \$15,000 a year, which would be subject to 12 per cent. discount, leaving \$12,000 net. The plant had been exempted on account of its value to Hull as a going industrial concern. The company had agreed to pay \$1,300 a year, which was to be divided between the Catholic and Protestant boards. The latter never sanctioned the exemption scheme and kept raising its assessment claim until it demanded the whole of the \$1,300. Being left without any revenue at all from the big manufacturer the Catholic Board now declines to renew its exemption agreement, which comes up for ratification every ten years. Trustees claim they have lost \$100,000 to the Eddy Company. All the tax required by the Hull Board is \$26,000, so that the disposition of the Eddy revenue is of much concern to the city.

Mr. H. B. Shepard, president of the Shepard & Morse Lumber Company, has been over the limits with the Canadian manager of the company, Mr. Peter Whelen, and Mr. Minot Shepard, son of the president, who comes from Boston to study the Canadian end of the business. The company is preparing to cut a quantity of logs which will produce the usual output of lumber. The company's mill cut this season promises to be 32,000,000 feet.

The Dominion Government has awarded the contract for the new Kippewa dam to Morrow & Beattie, of Peterboro, the contract price being \$26,210. The dam is part of the Government's great scheme for the conserving of the waters of the upper Ottawa and distributing an equal amount of water all the year round, with the exception of the spring. After the completion of the dam the greater bulk of the Ottawa's water will be retained in Lakes Temiskaming and Kippewa. The contract for the Temiskaming dam was let some time ago and the builders have nearly completed the work.

New Brunswick News—Preparation for the Winter Cut

St. John, N.B., Nov. 10.—The past fortnight in lumber trade circles has been productive of a number of interesting phases although none of a startling or even remarkable nature.

The most interesting feature of the industry during this particular season of the year is afforded by the prospects and conditions governing and connected with the getting out of the winter's cut of logs. It is upon this phase of the business that the first forecast of next year's business is built and it is the only basis upon which to figure the probable output of lumber during the ensuing season. Hence its importance to all connected with the trade from the man who chops the logs to the man who retails the lumber at the lumber yard.

For each year of the decade preceding the year 1906, there was an increase each year in the cut of logs at the principal logging centres of New Brunswick. Then began the period of depression in the deal trade, from which that trade has not yet recovered. Since that time the annual cut of logs on the St. John, the Miramichi and the other principal rivers of this province has averaged perhaps two-thirds of what it amounted to previous to 1906.

The winter of 1909-10, judging from all indications, promises to be somewhat similar in this respect to the three winters which preceded it. The initial cause of this curtailment is, of course, the uncertainty which prevails in regard to the future of the spruce deal market. Curtailment of output and of supply of raw material is obviously the safest policy.

Practically all the larger manufacturers have completed arrangements for the winter's work and, speaking generally, the prices being paid for the getting out of the logs are much the same as those which figured in contracts made a year ago.

The wages of choppers, teamsters and swampers are also very similar to those paid last winter. The fall so far has been a most unfavorable one for the getting of logs. The excessive wet weather has in many sections made the roads impassable. Up till the end of the first week in November there has been no frost in the ground. The streams have been very high and the swamps and lowlands in many places have been flooded.

The manufacturing season of 1909 is drawing very near to a close. The 20th of November will mark the cessation of operations at all the inland mills with the exception of portables. At this city nearly all the mills will be closed late in the present month or early in December. There will be only two exceptions to this rule; the two plants in question being so situated that it is possible to keep them running throughout the winter and also having enough logs to provide for all or a part of the winter's operations. With these two exceptions, local mill owners will have their logs practically cleaned up when the mills cease operations later in the month. The curtailment in logging operations each year does not provide raw material for extended sawing seasons such as those of four, five and six years ago. With their logs practically cleaned up this fall, all the probabilities point to the conclusion that the mills will make a late start in the spring of 1910. They will be obliged to wait until the new logs reach the booms. The earliest of these new logs arrive about the

middle of May, but no really important quantities are on hand until a fortnight later.

A feature of the past month has been the continued monotony of the trade in cedar shingles for export to the United States. While cedar shingles lost considerable ground during the hot season, which has not since been regained, prices and prospects are by no means such as to warrant any pessimism on the part of those who have shingles to sell. The high prices of last spring brought heavy receipts and a consequent shrinking in the demand with the natural shrinkage in price. At the same time local people claim that they have no trouble getting rid of their shingles at prices which by no means indicate that the bottom has fallen entirely out of the shingle market.

An enquirer for cedar shingles would be quoted from \$2.75 to \$2.85 on dutiable "extras" and from \$2.25 to \$2.35 per thousand on dutiable "clears."

Strong Position of English Deals

The two great lumber staples of the eastern Canadian provinces—pine and spruce deals—for export to the English market, have moved along into the fall season in a strong position, with price gains reported in spruce and a promising outlook for pine, though pine prices are not quotably higher. The English market for spruce had been very disappointing since the spring of 1907, and in the interim the mills have been turning a larger proportion of their cut than usual into sizes suited to the American market. Though the new duty will be a less severe handicap upon American shipments than was the old Dingley bill, it is claimed in Canadian circles that a larger proportion of the cut will seek a market across the water should present favorable conditions in England continue. Canadian lath, shingles and clapboard will continue to find their chief market in "the States," but there is no enthusiasm for enlarging the production of the two first items, though, perhaps, the more favorable position of clapboards will encourage an enlarged production. The demand for spruce clapboards from the New England trade was never stronger than at the present time, and this, coupled with the fact that the tariff charge has been reduced from \$1.50 to \$1.25 per thousand pieces, will quite surely encourage an enlarged production. The white cedar shingles of Eastern Canada were hard hit by the new tariff, and it will require a strong American market with a high level of values to enable the shipper to overcome the handicap of the duty of 50 cents and show a profit.—Lumbermen's Review.

An English View of the Deal Market

The spruce deal market in Great Britain is thus summarized by the London Timber Trades Journal:

"There is no change to report regarding values of these goods; in fact, the market shows no sign of any fluctuation either way—that is referring especially to c.i.f. prices. With regard to the near future, it is almost impossible to forecast how prices will turn out. But to review the position would not be altogether inadvisable. From the state of the demand which we can fully believe and realize exists in the American market, we may be certain that the shipper can dispose of a considerable amount of his available cut somewhat advantageously to that market; but from what we can gather, there will be a surplus of not inconsiderable proportions for this market for shipment per liners. It is no use disguising the fact that the demand in this country has fallen off considerably, and, although stocks are by no means too heavy for a normal demand, if a large quantity were to come over by liners the demand would be easily catered for ex quay, and stocks would remain. It is all very well for the shippers to lead us to understand that prices will never come down to any extent, because every interested party knows that they cannot remain on the present basis for ever, and it only means that if the demand remains in the present unsatisfactory state, and consignments are sent over here, prices are bound to ease a little. So that it all depends on what the demand in this country is like for the next two or three months whether prices will be maintained."

Milling in Transit

Attention is directed to the advertisement of J. R. Eaton & Sons, of Orillia, who announce in this issue that they have recently improved their facilities for milling in transit by having railway sidings built to their factory. As Orillia is an important railway junction point, the firm believe that they are particularly well situated to give good service to parties wishing to have planing, matching, moulding, resawing, etc., properly done. In a letter to the "Canada Lumberman and Woodworker," the firm report that they are doing this work at the lowest possible price consistent with good workmanship, and they make the following point in regard to price, which is often overlooked: The lowest priced work in matching lumber does not by any means necessarily imply that it is the cheapest. Twenty-five cents per thousand is a big item on this work, but lumber run too fast through the machine or run on poor machines or on machines not kept in first class order will do far more damage to the lumber than is gained in the difference in price.

Let Us Work with You

The making of the Cutter Heads for woodworking machinery has been our specialty for years and many mill men come to us for their best work in this line.

THE SHIMER CUTTER HEADS are essential, if an increase of product over old methods is desired. They can be fitted to any make of matcher, moulder or planer, all that is necessary is to give us the measurements asked for on our card.

THE ENHANCEMENT OF THE QUALITY of product, the saving in time and material, the relief from the worry of "fitting and trying" are a few of results of using the Shimer Cutter Heads.

EFFICIENCY IS SYNONOMOUS WITH THESE TOOLS. They are made with precision, care and judgment by skilled tradesmen in their line. Each cutter is fixed upon its seat, pitched for clearance, and as a result it works with the freedom of a saw tooth when set, producing outlines of lumber, accurate, clean and smoothly finished.

In the filing and fitting department The Shimer Cutter Heads are so readily sharpened with an ordinary three-cornered file and the Bits are so easily set to the gauge that a uniform size of tongue and groove is maintained until the full circle (tool cutting edge) of each Bit is used up. Duplicate cutters can be had promptly at reasonable prices as we keep the measurements and records of all tools turned out.

These tools will enable any planing mill to increase its capacity and do better work at less expense. It will pay to try a set 30 days.

See That You Get the Genuine

Look for the NAME and TRADE MARK "The Shimer Cutter Head" stamped on every Head we turn out. A dealer who would sell you an imitation means to deceive you—send them back and demand the genuine article with our guarantee for your protection.

Samuel J. Shimer & Sons, Galt, Ont. Can.
Branch of Milton, Pa., U. S. A.

EDGINGS

Ontario

The Bray Lumber Company, Powassan, Ont., have advertised sawmill, etc., for sale.

Jackson Bros., Gore Bay, Ont., operators of timber and sawmill, are reported to have assigned.

Hamilton Brothers, of Glenhuron, Ont., have lost their sawmill by fire. The loss was \$3,500, with no insurance.

Capt. Shear, of Port Arthur, Ont., has been awarded a contract to supply 300,000 ties for the C.N.R. this winter.

The mill of the North River Lumber Company, at Widdifield, Ont., has been burned. The loss amounted to \$10,000, partially covered by insurance.

The Sturgeon River Lumber Company, Limited, have been incorporated with a capital of \$50,000. The incorporators are H. S. Brennen, M. J. Brennen and H. W. Watson, all of Hamilton, Ont.

C. N. Clendenning, of Welland, Ont., is building a new planing mill on Queen Street. The roof will be an oval one, supported by lattice covered with asbestos. A 40 h.p. motor will be installed.

Keenan Brothers, Owen Sound, were the successful tenderers for the Cape Croker timber for the coming season. A number of tenders were received by the Department of Indian Affairs, many of them being close.

The Siemon Company, Limited, has been incorporated to take over and operate a number of valuable manufacturing plants and timber limits. The head office of the company is in Toronto and its plants in Wiarton, Lakefield and Parry Sound.

The F. & L. Company, Limited, Toronto, Ont., capital \$75,000, has been incorporated to manufacture and deal in products of iron and wood. The incorporators are J. Fowler and M. Fowler, both of Toronto, and J. Wilson, W. B. Campbell and G. D. Leadbetter, all of Detroit, Mich.

Fire broke out on Nov. 5th in the warehouse of the Guelph Paper Company. The upper storey of the warehouse was gutted and the stock all damaged by fire and water. The loss is estimated at \$7,000, partially covered by insurance in the Commercial Union, Norwich and Home Insurance Companies.

Fire destroyed the shingle mill at Clyde Forks, Ont., run by Lawrence Bros., on Nov. 5. It is supposed to have started from a spark from the engine. No other damage was done except to burn a lot of shingles. The portable engine which runs the mill was not badly damaged. All the other machinery was burned.

Final negotiations are under way for the taking over of the Imperial Paper Mills plant at Sturgeon Falls, Ont., by a syndicate, and the citizens of that town are anxiously awaiting the outcome, as the plant has been idle for many months, the town suffering accordingly. The sum of \$20,000 has already been paid on the purchase price, and an additional sum of \$100,000 is to be paid when the necessary papers giving title are executed. It is said that the purchase price is in the neighborhood of a million and a quarter dollars.

The Canadian Bond Hanger & Coupling Company, Limited, Ottawa, has been incorporated with a capital of \$45,000, to carry on the businesses of engineers, founders, machinists, millwrights, woodworkers, iron and steel workers and fitters. The incorporators are: W. C. Perkins, M. C. Edey, A. W. Fraser, G. W. Hunt and J. G. Gibson, all of Ottawa, Ont.

Eastern Provinces

J. J. Murphy, timber merchant, Quebec, Que., is reported to have assigned.

Fire recently broke out in the Williamson & Crombie lumber mills at Kingsbury, Que., and caused between \$10,000 and \$15,000 damage.

A number of Americans interested in the paper industry are inspecting the Murray Bay Lumber Company's lumber district with the object of establishing a pulp and paper mill at that point.

It is understood that Lord Northcliffe proposes to establish a line of steamers between Newfoundland and England in connection with his paper and pulp industries at Grand Falls, Newfoundland.

The Riordon Paper Mills, Limited, have purchased the Torrance property on Beaver Hall Square, Montreal, and intend using it for office purposes. It is understood that the price paid was in the neighborhood of \$30,000.

A large party of United States merchants interested in the paper business visited the Lake St. John district on Nov. 7th, and all were surprised at the enormous mills and water power development of the country. Much increased traffic is expected as a result of this trip and it is possible that more United States paper makers will visit the country.

The Eastern Canadian Lumber & Construction Company, Limited, said to be incorporated in New York by New York men, is reported to have purchased the lumber property and sawmill of Isaac Prescott in Albert County, N.B., for approximately \$1,000,000. It is said that the company will develop the hardwood lumber industry in that section and will reopen the Albert Southern Railway. The name of W. H. Malcolm, of New York, has been mentioned as one of those interested.

The report of the International Paper Company for the fiscal year ended June 30th, makes poor reading for its stockholders, the net earnings being but \$149,967.99, which is paltry in comparison with average years in the business life of the company. In explanation of the small surplus President Burbank says that the long strike which occurred in the latter part of 1908, together with unfavorable business and manufacturing conditions, is responsible for the small amount earned.

A recent despatch stated that the ship Glenlin, after loading at Rimouski, had been driven ashore there by a northerly gale. Messrs. Price Bros. & Company, to whom the ship was chartered, immediately on receipt of the news of her accident despatched the steamer Lord Strathcona to the Glenlin's assistance, and it was hoped that she would be floated before receiving serious damage. The Glenlin is a splendid iron ship of 1,847 tons register, and is loaded with lumber for South America.

Western Canada

Galvin-Walston Lumber Company, Humboldt, Sask., have registered in Alberta.

The Red Spruce Lumber Company's plant and holdings in Vancouver, B.C., are reported to have changed hands for \$200,000.

R. Conn & Son, lumber dealers, have recently opened a branch at Moore Park, Man., on the C.P.R., McGregor-Varcoe branch.

The Guggenheim interests are said to have obtained control of the Western Fuel Company, which owns 42,000 acres of coal and timber lands near Nanaimo on Vancouver Island. The deal, which was for two millions, included the mine at Nanaimo.

The steamer Empress of India, sailing for the Orient on October 28th, carried the first shipment of Canadian pulp wood sent across the Pacific from Canada. There were 160 bales, each weighing 250 pounds, from the new pulp mills at Swanson Bay to Kobe, Japan.

Creosote wood blocks, which will be used on the traffic floor of the Fraser river bridge at New Westminster, B.C., have been found to last on bridges for flooring double the time of ordinary planking. The floor is expected to last for ten or fifteen years. The cost is \$22,000.

A despatch from Arrowhead, B.C., states that the Big Bend Lumber Company, of that place, has suffered a severe loss in the burning of its mill. The building was insured, but the loss will nevertheless be considerable. It is understood that the kilns and lumber piles were not burned.

Martin Jerome, ex-M.P.P., Government fire ranger, has returned to Winnipeg after investigating the damage and seriousness of the swamp and bush fires which have been raging between Cold Springs, Man., and The Narrows. He reports a large loss of property and untold loss of timber and damage to the land.

The steamer Princess Beatrice has brought down the second shipment of wood pulp from the mills at Swanson Bay, B.C. The shipment consisted of 50 tons. The vessel brought word that the new pulp mills are working night and day and turning out an average of 25 tons of pulp per day. The present shipment is for Port Mellon.

A large basket and box plant will be established at New Westminster, B.C., on a site on the waterfront in the west end. American capital is interested and work will be commenced at once. Arrangements have already been made for the material required. It is expected that the plant will be in operation in January. The first section will cost from \$60,000 to \$75,000, but the plant will be greatly increased later.

There is a great lack of labor in the woods in the Prince Albert, Sask., district. Any man who can lend a hand will get from \$30 to \$45 a month and all found from any of the Prince Albert or Sturgeon Lake concerns. A. L. Mattes, manager of the Prince Albert Lumber Company, said recently: "I could put 1,500 men to work at once if I could get them. I am unable to get enough help and since logging operations have commenced many more men are wanted in the woods."

The B. C. Gazette gives notice of the incorporation of the following companies: Timberland Lumber Company, Limited, capital \$25,000; the Call Creek Lumber Company, Limited, capital \$150,000; Portland Wonder Mining Company, Limited, capital \$600,000, to import, buy, sell and deal, among other things, in sawlogs, timber, lumber, wood pulp, etc.; Powell River Paper Company, Limited, capital \$1,000,000.

The site is being cleared for a new lumber mill at Nahmina on the Alberni canal, B.C. This point is at the mouth of the Nahmina river, eleven miles from Alberni and will be tributary to that town. The machinery to be put in will be large enough to load a big ship in a short time, having a capacity of something like 100,000 feet a day. The lumber for the workmen's houses has already been taken down from Alberni and the work will be pushed ahead so that the mill will be able to start work early in next year.

The steamer Georgia, of the Canadian Mexican line, which left Victoria, B.C., on October 26th, had a full cargo of lumber and coal, made up of 16,000 railway ties loaded at Chemainus and Sidney; 1,000 tons of coal from Boat Harbor and Comox; and a quantity of box shooks. A small consignment of canned salmon and other merchandise was also taken. This is the largest cargo taken by the Canadian Mexican steamers for many months. The freight will be landed at San Blas, Manzanillo and Salina Cruz, after which the steamer will load with through freight from Europe and Montreal. The steamer took south seven passengers.

Lumber freight rates on the Pacific are firming up considerably, both the Australian and United Kingdom ranges commanding higher prices. Rates are quoted as follows: San Francisco, \$3.50; San Pedro, San Diego and other southern California ports, \$4.25; Hawaiian islands and Guaymas, \$5; Santa Rosalia, \$6; Sydney, 31s. 3d. @ 32s. 6d.; Melbourne or Adelaide, 36s. 3d. @ 37s. 6d.; Port Pirie, 35s. @ 36s. 3d.; Freemantle, 40s. @ 42s. 6d.; Hong Kong, 33s.; Shanghai, Kiaochow or Weihaiwei, Port Arthur, Taku or Newchang, Kobe, Yokohama or Nagasaki, 30s.; Valparaiso, for orders (2-6 less direct), 41s. 3d. @ 42s. 6d.; Callao, 38s. 9d. @ 40s.; Cape Town, 52s. 6d.

The construction of the Canadian Northern Railway across British Columbia will give the lower coast mills and others as far east as Kamloops direct communication with a large territory east of the mountains, and over a four-tenths grade, which should allow medium freight charges. The agreement with the Government provides that construction shall be started within three months, and Mr. Mann says that with surveys advanced as they are there will be no delay, and that the road will be completed in three years. There will be docks both at Vancouver and on the Fraser river, the plans calling for a fast ferry service from a point south of the mouth of the Fraser river to Vancouver Island. The route will be via Kamloops and the Yellowhead pass to Edmonton.

A new town in British Columbia is Chase, at the foot of Little Shuswap lake, a few miles from Kamloops. A few months ago a couple of shacks marked its forest site, to-day the town has at least fifty residences, well laid out streets, a first class tourist hotel, several stores, two churches, a bank, a school, two sawmills and other evidences of increasing prosperity and importance. Of the townsite over 30 acres have already been surveyed, and nearly every lot has been disposed of. The cause of all this development is to be traced to the enterprise of the Adams River Lumber Company, Limited, in locating a large and modern sawmill plant at that point. The workmen have purchased lots and built homes, the company supplying the lumber on easy terms. J. A. Magee, the company's manager, has taken a deep interest in the affairs of the new community and stands high in the esteem of all.

The Gordon Hollow Blast Grate

**Makes TWO Boilers do
the Work of THREE**

SAMPLE TESTIMONIAL:

I had THREE 300 H.P. boilers in use in my saw mill, burning mostly wet fuel, and WAS NOT ABLE TO RAISE STEAM ENOUGH TO KEEP RUNNING. Since installing your hollow blast grate I have been using only TWO of the boilers, and have STEAM TO SPARE. Theo. Kundtz, Cleveland, Ohio.

The Gordon Hollow Blast Grate not only greatly increases the efficiency of a boiler and burns wet, green or frozen sawdust, slabs, etc., readily, either separately or together, but

**IT MAKES FIRING EASY and is PRACTICALLY
INDESTRUCTIBLE**

Let us ship you an outfit ON APPROVAL. We will give you thirty days in which to test it, and will pay the freight BOTH WAYS if it proves unsatisfactory.

20,000 Shingles Per Day with an Original Dunbar!

A prominent manufacturer writes that with an ORIGINAL DUNBAR SHINGLE MACHINE he has cut and turned out as high as 21,000 shingles in one day.

Such achievements make this machine the leader in its field.

The DUNBAR produces more shingles per day than any other machine.

In the twenty-five years that this machine has been on the market it has shown a steady increase in popularity and improvements.

The DUNBAR is the only shingle machine that is equipped with **ring oilers**—the one sure cure for hot boxes.

What one leading shingle man says: "On a two million contract of bone dry cedar, the stock could **not** have been manufactured at a profit without the DUNBAR MACHINE. In the eighteen months I have used your machine my outlay for repairs has been only 25 cents for a spring."

The minimum of delays, repairs and saw-hampering if you use the ORIGINAL DUNBAR.

The Quality of a Disston Saw

(The Saw you See from Sea to Sea)

begins with Disston Steel

THE Steel used in a DISSTON saw is a steel which goes through a treatment exclusively DISSTON. It is the best possible steel, to begin with. To make sure of that it is made right on the DISSTON works, and has been since 1855.

Something of its peculiar quality is seen when you hear that its tensile strength is **three times greater than that of steel used in the construction of bridges and buildings.**

Because of the steel being so strong, and because of the shop treatments it gets before emerging as a finished SAW or TOOL, a DISSTON Saw will withstand the greatest

reasonable strain. The teeth of a DISSTON Saw have the **right** temper, the correct temper to give wear and to retain a sharp edge the longest possible time.

These qualities of a DISSTON Saw have carried the brand over all the world—from sea to sea. For nearly seventy years, DISSTON Saws are the acknowledged STANDARD of the saw world.

You might be surprised to know how many styles of DISSTON saws there are—one for every use. The DISSTON "Handbook" (200 pages) describes them and something of the making of saws—interesting. Send for a postal.

IT WILL PAY YOU TO INQUIRE INTO THE MERITS OF OUR

New Tie or Log Siding Machine

It slabs both sides of the logs accurately and rapidly at the one operation. Both saws movable to or from the centre simultaneously by means of a lever within the sawyer's easy reach, and the spacing indicated on a quadrant in plain sight. This machine will cut over 3,000 ties in ten hours. In any mill using a Gang, this machine, if used for preparing the cants, will increase the output 20%. It is a compact machine, strongly built, as the cut indicates, to withstand hard and continuous usage. It is without an equal, let alone a superior, in this line, because it meets the requirements perfectly. Let us have an opportunity of sending descriptive matter, and price.

Dunbar Logging Engine.

Dunbar Logging Engines will haul upwards of 150,000 feet of lumber, depending on the condition of the road which only requires to be made as for horses' operations except that they should be nine feet wide.

In every case there is a large saving over the use of horses. The results to be obtained are not based on theory but have been actually obtained and in some cases the saving has been 75%.

Our descriptive circulars and photos will be gladly sent upon request. They will certainly interest every lumberman who recognizes the importance of economical log hauling.

We also manufacture Shingle Machines, Rotarys, Stock Gangs, Planers and all Saw Mill Machinery.

SIMCOE - - - ONTARIO

Cables Carried in Stock for Renewals

The cheapest way to skid and load logs is by steam power. The

Universal Logger

is a combined two line skidder and loader with separate engine for loading with steel skidding boom and steel swinging loading boom. It is self-propelling, spots its own cars and moves rapidly from point to point, saving time and the usual switching expense.

Ample water tank capacity is located between the trucks, and the frame is constructed to permit empty cars to pass through the machine for loading by means of its own power.

This machine is especially adapted for light steel or wooden rails.

May We Send Catalogue?

CLYDE IRON WORKS

Sole Manufacturers of the McGIFFERT and DECKER Patent Self-Propelling Steam Logging Machinery.

Duluth, Minn.

C-103

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. All such Claims are FALSE, as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"

REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Write for prices.

R. H. SMITH CO. Limited St. Catharines, Ont.

Here is the Most Reliable Shingle Machine Made

and the most profitable one too. Reliable because the

COLUMBIA

is always ready to run in any kind of wood. Profitable because it will turn out more and better shingles, in less time, from the same stock, than any other shingle machine made.

At the "come on" sign from you we'll send you all the "convincement" necessary to demonstrate the Columbia's superiority.

Steam Actuated

Single and Double

Log Deck Machinery

Our Stationary Niggers are built single and double cylinder, in sizes to fill the requirements of any mill.

The Cylinders are provided with steam ports instead of outside pipes, thereby avoiding leaky joints and loss of steam. They are made 8 in. and 10 in. in diameter, cast especially strong where necessary.

Valve Gearing and Valves of a newer and stronger design. Steam is admitted through a check valve, which regulates the exhaust to provide a steam cushion to the piston at both ends of the cylinder. This eliminates any danger of the cylinder heads being forced out by the piston. The valves operate easily and quickly by one lever only. Valve travel is short and the same distance in each cylinder.

Guide Rods of forged steel shafting, same diameter as piston rods, are carried with one end attached to the upper cylinder head to make the machine more rigid and self contained.

Cross Heads, extra heavy, bored to fit piston rods and guide bars, and provided with patent improved oiling arrangement.

Nigger Bars of cast and wrought steel, wider and stronger than the old style bars, fitted with forged steel teeth, hinged to drop back out of the way as the bar recedes.

New Spring Cushion Floor Plate, extra heavy, constructed to take up shock of the bar on the spring cushioned end pieces. All Cylinders and Valves are **thoroughly tested** before shipment.

NOTE: The accompanying cut has been used merely to show the general arrangement of our Stationary Nigger, as the cuts for our new Nigger, described above, are still at the Engravers.

We Manufacture a Complete Line of

Niggers	Log Turners
Kicker	Cant Flippers
Log Stops	Board Lifters
Log Loaders

PETERBORO SAW MILLS

A Slabbing Machine of Real Merit

Our No. 1 Twin Circular

Slabs both sides of the log at once

It is the very best machine now made for slabbing for a stock gang or a machine such as our "Kendall" Patent Circular Gang. It can be driven by a steam feed as shown or with a rope feed, and it is also made with a continuous chain feed.

Extremely simple and economical to operate.

It will add greatly to the capacity of a mill where such a machine can be used—and the repair bills are practically nothing at all.

Built in two sizes to slab logs of any length into cants from 24 in. to 6 in. and from 16 in. to 4 in.

We can send you a lot of interesting information if you would like to have it.

If you want any machinery for your mill this winter, don't forget that we build it. You will be interested in our prices.

**Reliable
Veterinary
Remedies**

No logging outfit is complete without a
supply of reliable veterinary remedies.
Getting the wrong kind means the loss
of the use of your horses when time is
valuable.

Johnson's Veterinary Remedies
are guaranteed never to fail when used
as directed. You get your money back if
they ever do.

They are
Johnson's Horse Liniment No. 1.
A penetrating Alcoholic Liniment.
Put up in one gallon jugs, with full
directions, per imperial gal. \$4.50

Johnson's Horse Liniment No. 2.
A combination of the best oils used
as liniments, imp. gallon . \$3.00

Johnson's Horse Colic Remedy.
A sure and speedy cure for colic
Imperial gallon \$5.00

**Johnson's Veterinary Healing Oint-
ment.**

Positively the best all-round healing
ointment made. In use by the larg-
est owners of horse flesh in Canada.
Put up in 2 lb tins, each . . \$2.25
or in 1/4 lb tins, per dozen . . \$3.50

**Johnson's Condition Powders. (Con-
centrated).**
Put up in bulk, per lb . . . 30c.

These goods being put up in bulk are
more economical than others, as cost of
bottling, etc., is saved.

CAMP REMEDIES.

In addition to our Veterinary Rem-
edies we make a line of medicines for lum-
bermen, including a strong, penetrating
liniment, healing ointment, cholera cure,
liver pills, cough syrup, in fact anything
in the form of Camp Drug Supplies. We
know that there are no better remedies
made than those we offer. There may be
others nearly as good, but they lack our
guarantee. Satisfaction or money back.
A trade discount of 10% allowed off all
orders amounting to \$100.

Send postal for printed matter.

Style "B" for Mill Furnace

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal.

The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one:—

Berriedale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited, Orillia.

Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

New Model Diamond Shaking and Dumping Grate Bar

We handle Boiler Flues, both new and welded; at lowest prices.

The demand for the Diamond Grate has increased by 50 per cent. during the last 2 months and is giving splendid satisfaction to all our customers. Burning all grades of fuel with the very best results. All live Mill Managers and Engineers would do well to consult us when requiring new Bars. **These Grate Bars are warranted not to be an infringement on any prior patents. We stand behind our customers and guarantee them in the unmolested use of our own invention.**

We make a specialty of Boiler Setting and repairs to Boilers, employing none but expert workmen.

A post card or personal enquiry will bring a prompt reply.

The Lidgerwood Patent

Hauling Loaded Sleds over a Ridge

SLEIGH HOIST

A machine designed to hoist or lower sleighs loaded with logs, pulpwood, bark or other forest products, in mountain logging.

It handles steadily and under perfect control the largest sleigh loads, on any hill, **no matter how steep**, and up to 3,500 ft. in distance.

Saves horses when used with them. Maiming and killing of horses on steep hills is eliminated; saves the horses from the hardest work, that of taking the empty sleighs up the hills.

Does what horses cannot do. The hardest uphill haul costs no more than hauling on the level with horses. Enables bringing timber over heights of land, thus frequently saving long hauls; the improving of small streams; or the absolute loss of stumpage.

It pulls itself about in the woods; uses wood for fuel; and is simple to operate

We now have a representative in Canada, who will examine your conditions and tell you what can be done, free of charge of any nature.

Snow Plows The Famous Brazel Patent

Known in every Camp from the Atlantic to the Pacific, as the most satisfactory Snow Plow made.

COMBINATION MODEL, LUMBERMAN'S SNOW PLOW, CAN BE USED
EITHER WITH OR WITHOUT RUT CUTTER.

One man to operate. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9' wider than sleigh track or narrower if desired. Height of Mouldboards prevent snow falling back on track. **Brazel Plows** cut 6' wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure from an ice road leaving a clean roadbed. Roll up and push entirely away from the road, 12' of loose snow each time the plough passes over.

Sold on their merits. Strongly built and of first class material. Well finished and fully guaranteed.

Illustrated Catalogue and Prices on application.

Lumber Shippers Save Money

by using our

Car Door Lumber Rollers

Will fit any car door. The best and cheapest device on the market for loading and unloading lumber. The cost of a roller is often saved in a single shipment of lumber.

Wood Side Roller

Length of wood $4\frac{1}{2}$ ft., length of screw 16 inches; entire length 5 ft. 10 inches. Roller is about 15 inches wide.

No. 438, price each..... \$5.40

Order one or more, on two months' trial, (we'll pay freight on sample order anywhere in Canada between Winnipeg and Halifax.) If they are not all we claim, after you have tried them, ship them back at our expense.

Canadian Logging Tool Company, Limited

Sault Ste. Marie, Canada

SIMONDS

**Inserted
Point
Saws**

**Made
in
Montreal**

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take \$100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

Vancouver, B. C.

WIRE ROPE

Why experiment continually with wire rope you know is not up to "Dominion" quality—quality that means better material, better construction and better service?

MATERIAL—All our ropes are made from the best quality of imported wire, specially drawn to our own specification. Each coil is carefully tested for its tensile strength, torsion, flexion and elastic limit.

CONSTRUCTION—Every step in the construction of our wire ropes is carefully watched over by experts. Our many years experience in manufacturing wire ropes enables us to offer the best to be had anywhere.

SERVICE—Every length of "Dominion Rope" gives satisfaction, because it is serviceable and dependable.

All lengths and sizes carried in stock for immediate shipment

THE CANADA LUMBERMAN AND WOODWORKER is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., THE CANADA LUMBERMAN AND WOODWORKER is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

No. 23

Good Outlook for Georgian Bay Trade

The conclusion of the sawing season in the Georgian Bay district of Ontario finds the manufacturers in much better condition than they were a year ago. Last winter, the manufacturers foreseeing a dull summer season of trade, reduced the amount of their winter's cut. Some manufacturers were forced by forest fires to take out fallen timber which would otherwise have decayed, but taking things all round the woods operations were materially curtailed. Probably this was an important factor in enabling manufacturers to take early advantage of the improved demand for lumber which made itself manifest in the latter part of the summer. As a result, although there is a large amount of stock in the yards at Georgian Bay points, it is not sufficient to cause concern to manufacturers. In fact in many instances much of the stock is already sold and will be moved out during the winter, so that when the sawing season of 1910 opens the mills should be in good condition for disposing of the new stock.

A visit to a number of the yards at Georgian Bay points reveals the fact that the difficulty in disposing of the low grades is still serious. It is by no means so serious as it was during the early part of the summer of 1909 and for a year previous, but in the yards one sees to-day large quantities of low grade and comparatively little of the good stuff. During the latter half of the manufacturing season good stuff was shipped practically as fast as it could be produced. Prices improved and the demand was wide spread. The improvement naturally found its way into the lower grades, but there is still room for much more improvement in this regard.

Georgian Bay manufacturers of lumber, have pretty generally concluded that the business improvement is permanent. It is as yet too early to foresee what conditions will prevail next summer but they are

looking forward confidently to a much better season than those of the last two years. The woods operations this winter will be larger than last winter. Some operators state that they will take out a full quantity of timber. This will be considerably in excess of the quantity which was taken out last winter. It is reported from all the camps in this district that labor is extremely scarce. Good men are difficult to obtain and wages are exceptionably high. With the advanced cost of securing logs it is natural to expect that the manufacturers will look for increased prices, and unless something unforeseen occurs to bring about a setback it is altogether probable that next summer will see better prices than we have had for two seasons past.

One of the largest manufacturers in the district looks for higher prices early in December or at least by the first of January, and reports that middlemen are buying up stocks extensively in the belief that such an advance is sure to materialize. The same manufacturer reports that the activity in the building trade in Ontario is largely responsible for the betterment. His firm had more enquiries originating from this source of demand during the last six weeks or two months than during all the previous part of the summer. A still more significant indication of prevailing conditions is afforded by a recent purchase by a customer from the United States, who took 500,000 cull shingles and shortly after sent an order for 500,000 more. This, with the increased duty on shingles indicates a vigorous demand.

What with stocks fairly well reduced, high cost of labor, improved demand and a good winter's cut, the indications are that the Georgian Bay manufacturers will have a much better season's business in 1910 than they have had for some time.

Manufacturers Fear a Car Shortage

Owing to the remarkable buoyancy of commercial conditions, which has become manifest throughout Canada and the resultant expansion of trade, a serious car shortage is feared by the Canadian Manufacturers' Association. The executive of the association have been giving the subject careful attention for some time and, anticipating that their members may be adversely affected, have issued an official statement and a warning to all members through their transportation department. The statement was contained in a circular, and reads in part as follows:

"It may not be generally known, but there is every indication that at a very early date a severe shortage of cars will develop in Canada. In fact, it is safe to say that there is a scarcity of cars at the present time, and as one manufacturer said: 'We haven't even begun to ship yet—what are we to do in the future?' Enquiries made of the railways disclose a grave apprehension on their part as to their ability to meet the wants of shippers as desired, and they are putting forth every effort to obtain the greatest efficiency possible from the available equipment. Circulars have been issued to agents and yardmen to the effect that it will be necessary during the balance of the present season to place, load, or unload and lift cars with all possible dispatch. Agents and yardmen are asked to enter heartily into the spirit of the thing and to be active and tactful so that the demands of the shippers can be satisfied and the car performance of the carriers considerably improved.

"Besides these emergency instructions, special agents have been sent to all terminals, large and small, to post the army of railway employees as to the gravity of the situation and to keep every empty car moving to the spot where it is wanted. Daily telegraphic reports of the movements and location of cars, and whether loaded or empty, are received. At stations where there is no telegraph service freight conductors have instructions to take the numbers of the cars which they find there and report whether loaded, empty, or partly loaded and direction going, so that the railway officials are in close touch with the movement of every car on their system. In addition to this, new cars are being built as fast as the capacity of all car shops will permit, so that it will be seen that the carriers fully recognize the seriousness of the situation and are doing everything within their power to relieve it."

The opinion is expressed that, up to the present time this fall, the railways in Canada have met the demand for cars. "It is evident, however, that a considerable percentage of grain is being held back by the farmers in the West. This, undoubtedly, will have a serious effect on the situation. The manufacturers can assist very materially in overcoming

ing the car shortage by keeping the equipment in their possession for the shortest possible period."

Here are a few "don'ts" for the manufacturer:

"Don't pay demurrage. It doesn't pay you or the railways. Each and every car is worth from \$2 to \$2.50 per day to the railways. It should be worth considerably more to you.

"Don't allow the shippers from whom you buy raw material to send you more than you can take care of without delay.

"Don't allow cars to stand under load until the free time allowed by the demurrage rules has about expired.

"Don't allow empty cars to stand on your siding after they are unloaded. Notify the agent to have them taken away."

The exact situation in regard to the car supply, however, is somewhat difficult to learn. Reports from different sections of the country are rather conflicting. Winnipeg reports state that no appreciative shortage is yet felt. A record amount of grain has been shipped and,

with the grain rush over, a great quantity of rolling stock is released. The G.T.P. is reported to have handled all shipments offering with creditable despatch for a pioneer road. The C.N.R. is said to be in splendid condition so far as motive power and cars are concerned, and an announcement is made that the C.P.R. have constructed 370 miles of railway in the three prairie provinces this year, the bulk of it being in Alberta.

In Ontario, although large quantities of freight are now offering, the railways are handling it with more speed than was expected. At important shipping points cars are being supplied without much delay. Lumbermen at manufacturing points, such as those on the Georgian Bay, where heavy grain traffic also offers, report that they are not seriously handicapped by lack of cars. There is what one might call a pinch in all directions, but if it becomes no worse no great objections will be made. The situation, however, is doubtless one which renders care and despatch necessary on the part of all, particularly shippers and consignees, and the warning of the Canadian Manufacturers' Association is timely.

Lumber Insurance Risks - The Position of the Policy Holder

"Insurance companies in principle do no more than re-distribute the dollars the lumbermen themselves have paid in premiums." This principle is the text of a timely article in "Lumber Insurance," and is the introduction to a series of articles which are to be published, giving advice regarding precautions to prevent the origin of fires. Canadian manufacturers and dealers in lumber have had a great many large fires this year, and are probably more ready than ever to listen to the gospel of insurance. Not that they have been delinquent in this regard in the past, but like everyone else they must be educated ceaselessly.

In the introductory article referred to above "Lumber Insurance" says in part:

"The extent to which the occurrence of lumber fires is brought to the attention of the general public may be directly measured by the amount of space given to such happenings in the daily press. When fire destroys a hotel known throughout the country, or a mercantile house with a business of national scope, the fact is heralded under headlines in a prominent position, while the destruction of a yard full of hardwood lumber of perhaps five times the value, is editorially considered of so little importance as to gain only a few lines on an inside page.

"The day will surely come in America, as it already has in Europe, when lumber will be looked upon as a commodity of such value, that

the public will evince a real feeling of condemnation for the wastefulness which characterizes present day methods of handling. This sentiment may become so strong as to put a ban upon the present universal idea of accumulating in one spot such great quantities of inflammable property, if better methods are not found and applied for, surely protecting any considerable quantity from destruction by a single fire.

"A very considerable number of the great lumber fires of the past year have been traced to gross carelessness of management. At this writing the embers have scarcely cooled at a fire where a half million dollars of cut lumber was burned as a direct result of failure to keep properly closed the hood of the refuse burner. Yet the incident is passed over as of little importance, and because each of the several owners whose stock was destroyed was 'fully insured.' While these individual owners were fully insured and reimbursed by the insurance companies for their individual losses, the country as a whole is half a million dollars poorer, and the bit of carelessness which made the loss possible is a crying shame which should receive the lumber trade's stamp of disapproval in emphatic terms. As piled lumber is peculiarly a substance which feeds the flames rapidly, and is subject to the large probability of being a total loss when a fire once gains headway, it is particularly to prevent the origin of fire that the owner's efforts should be directed."

British Columbia Shingles Overcome U. S. Tariff Wall

Even the framers of the new United States tariff, could not foresee what the exact effect of the proposed changes would be. The case of shingles, for instance, provides an interesting example of the reversal of the effect desired. It was hoped to keep British Columbia shingles out of United States markets by increasing the import duty. Some fundamental economic laws, however, were overlooked, and the result is peculiar. British Columbia shingles had a strong hold on U. S. markets, and after a short interruption the trade is again flowing into its old channels. The popularity of British Columbia shingles is a factor in this result, and the natural ambition of U. S. workmen and others to share in the benefits of increased protection has assisted in preserving the market for the Canadian product. Canadians expected that B. C. trade would not be affected materially as regards the markets on the United States side of the line, and that ultimately the consumers in the United States would be compelled to pay the advance price necessitated by the increase of the tariff for British Columbia shingles, for the reason that the manufacturer of shingles in Puget Sound would, on the strength of the new tariff, bring the price of the United States shingles again up to the level of the British Columbia shingles. This, in fact, is what has happened, for the United States tariff has acted as a boomerang, according to the opinion of more than one manufacturer of Canadian shingles. In the recent tariff increases an advance of 20 cents per thousand was made on shingles imported into the United States. This was intended to stop the entry of shingles from Canada, and it did for

a few weeks. As soon as the shingle manufacturers in the United States saw this, they increased their price 20 cents per thousand, and began to congratulate themselves upon their finesse in having the tariff adjusted to their advantage. They did not anticipate what was to follow.

The loggers in the United States since the manufacturers got more for their product, concluded that they themselves were also entitled to more, so they added \$2 per thousand to the cost of the logs. Then the shingle weavers wanted a slice of the melon, and they struck for higher wages, asking a straight day wage instead of piecework. As a result of the latter request, many shingle plants are now idle, the weavers being on strike.

With all this increase, a reaction has set in. Of late the shingle manufacturers of Vancouver, who ship to the United States, have again been receiving orders, and the trade is now about equal to what it was before the tariff was altered.

"If the Government here stands firm in its refusal to allow the export of cedar logs, the American shingle manufacturers may call peccavi," said a prominent shingle man. "They cannot make shingles nearly as good as ours, because they have not got the cedar. The high grade cedar is obtainable in British Columbia, so with matters as they now stand we have control and can keep it. The result of the tariff has been that the consumer in the United States pays 20 cents more a thousand, for we had to add the amount of duty to our selling price, and even at that the orders are coming in."

Importance of a Knowledge of Carpentry for the Retailer

"A little knowledge is a dangerous thing," as some one said a long time ago, yet there are instances innumerable where a little knowledge has carried a man a long way on the road to success. One of the commonest methods of securing the goodwill of a prospective customer in any line of business is to equip oneself with information regarding his particular need and a little knowledge of personal interest to him, which if judiciously used at the proper time clears the way for business.

A little knowledge of carpentry or of architecture is of inestimable benefit to retail lumber dealers. The dealer who interests himself solely in the buying and selling of lumber without studying the uses to which the wood is put, is of no assistance to his contractor customer, beyond being a cog in the general business wheel, and a poor class of cog at that. He cannot be expected to establish a large or successful business. A dealer who considers the uses to which the lumber is to be put and understands something of carpentry, on the other hand, is of the greatest assistance to the contractor and quickly finds that a little knowledge of his customers' needs is a business asset of much importance. Know-

ledge of this sort makes the contractor a dealer's personal friend and induces him to bring all his business to that dealer's yard.

With a little knowledge of architecture the yard man can assist the contractor in determining the most suitable class of lumber for use in the various parts of a building. By intelligent use of knowledge of this class considerable sums of money may be saved which will often result in the securing of a contract or in the prevention of a serious loss.

How to obtain knowledge of this nature is a problem. The man with natural business ability will perhaps pick it up from time to time. The logical conclusion of these statements, however, is that retail dealers, unless they have this knowledge, should look for it in the men whom they employ. The carpenter who has graduated from the bench to the lumber yard is the best class of employee a dealer can find. Someone in the retail establishment must have knowledge of carpentry and be intimate with architectural matters if the yard is to grow. A little knowledge of this sort is a business asset, only exceeded in value by more knowledge of the same sort.

Economy Among the Low Grades—Utilizing the Edgings

The attention devoted to economy in the production of lumber is one of the most encouraging signs of the times in connection with the lumbering industry. We read and hear a great deal regarding conservation as applied in the woods. Reducing the waste in the lumber camps is one of the most effective methods of saving the country's resources, yet there are other methods, though not so generally known to the public, which are assisting in the work of preserving the forests and are exercising important influences upon the lumbering industry. The working up of lumber into finished products has advanced with rapid strides of recent years, until to-day practically everything which is of value in a log is converted into a saleable product. There are degrees of economy, however, even in the grading of lumber as it comes from the saw, which may have an important bearing upon the profits of a sawmill. The tendency of the day is toward an ever increasing use of materials which formerly were considered of no value and found their way into the burner. Sawdust is successfully used as fuel and experiments are said to have reached the stage now which make it practical to consider sawdust a commercial source of supply for alcohol.

Among the most important employees in a sawmill are the men who sort the lumber as it comes from the saw carriage and decide in

what manner it shall be further cut up. A capable employee on this work is a source of much comfort to the mill owner, as the ripping and cutting up of the boards is a process in which economy can be exercised to great advantage. Realizing this, a new grade among low grades was recently introduced by Graves, Bigwood & Company, whose mill is at Byng Inlet, Ont., on the Georgian Bay. The innovation was made last spring and has worked out satisfactorily. The company operate an extensive box making plant at Buffalo, N.Y., and have use for a large quantity of box lumber. They have introduced a grade, therefore, which is called "Fitch" lumber, by means of which they effect a considerable saving. After the first strip has been taken off a log the next strip frequently comes with one end much wider than the other. The usual practice is to rip this strip up and the result is a very narrow piece of lumber, the width being governed by the narrow end of the strip. At the wide end a large amount of edgings have to be cut off. These strips are now piled as fitch without being ripped. They are shipped direct to the box factory, where the box making machinery can take out of them a much larger percentage of lumber than can be secured by the rip saw in the mill. The edgings are saved and the cost of box lumber to the box factory is considerably reduced.

Elements Which Lead to Trouble—Failure to Figure Exact Costs

In eastern Canada, particularly in the maritime provinces, the lumber manufacturing industry, and especially that part of it which is connected with the manufacturing of building material, has difficulties to meet which are peculiar to the east and are the result largely of the business being of many years standing. In the west these difficulties have not arisen to so great an extent, though other troubles somewhat similar in result take their place. Diversity of prices is a common evil in all parts of the country. In the West it has many causes, being affected by freight rates, cost of labor, cost of raw material, competition from the United States, money stringency, or cheapness, etc.

In the East, one of the most serious difficulties with which the lumber industries have to contend is that caused by failure to appreciate the precise cost of production. The conditions prevailing to-day have grown up during a long period of years, and many concerns give far too little attention to the increasing costs of the articles and labor which go into the manufacture of their products. Lumber is rapidly becoming scarcer and consequently much higher in price. Labor also is a great deal more expensive than it was a few years ago. Both of these enter into the manufacture of all kinds of finished building material and make the product much more expensive than it was a few years ago. Numerous planing mills and woodworking factories in the East have not figured upon these increased costs. Some, in fact, are virtually adhering, in part, to old price lists of ten or more years ago. Some manufacturers being only partly alive to the situation, have advanced prices on certain

lines and others on other lines, so that the prices of different manufacturers are conflicting and seldom uniform. Among the smaller concerns, not only is the increased cost of production not included, but far too little allowance is made for fixed costs, including interest, insurance and depreciation, consequently while they think they are making money, they are not, and in many cases they realize this only when it is too late, probably after a loss by fire or otherwise. Many of the larger concerns realize that the prices of the smaller ones are much too low, but they feel that they must also sell at or about the same price or lose their business.

This unsatisfactory situation is always most aggravating when business conditions are dull. In more prosperous times when everybody can obtain orders at fairly profitable prices it is apt to be overlooked. It is nevertheless very real and should be studied carefully by every one. It applies practically to all forms of manufacturing. The only remedy which seems available is in stirring up public opinion. Legislation or trade arrangements are not feasible where the difficulty is largely one of individual bookkeeping. Individual effort alone can be looked to. In the struggle for the survival of the fittest, the small firms who adopt these unbusinesslike principles will go to the wall, but in doing so they involve others in difficulties which they did not deserve. These views are not inspired by any western conception of eastern methods. They are the ideas of manufacturers in the maritime provinces, who, from time to time, voice them forcibly.

Correspondence From Our Readers

A Shingle Problem—Product of 1,000 feet of Logs—Diversion of St. John River Waters

Vancouver, B.C., Nov. 15th, 1909.

Editor "Canada Lumberman":—

In your issue of October 15th you ask how many shingles can be made from 1,000 feet of logs.

In order that we might answer this query intelligently, there are a number of things which one would naturally require to know, such, for instance, as the kind of shingles being considered; the kind and size of the timber out of which they are to be made; the scale used to designate what 1,000 feet of logs is, etc.

I may say, however, that the following figures, which represent seven different kind of shingles (these being only some of which we make) can be accepted as being as nearly correct as it is possible to get them under the varying conditions of so many things which have to do with the case: 6,820; 6,300; 6,245; 5,925; 4,910; 2,660; and 2,425. These figures, be it understood, are based on British Columbia shingles, made from B. C. cedar, scaled by the B. C. rule, and manufactured in some of the reputable B. C. mills. I have already named three things which have to be considered in making this calculation, and now I am going to name another one, and one which the buyer should memorize if he can. If he cannot, then he should paste this information in his hat: there are mills, and I do not think it would be necessary to go out of this province to find them, on whose shingles one-eighth, or even one-sixth, might be added to the above figures. There are mills in Washington making shingles, and, of course, selling them too, where it would be probably quite safe to add one-quarter, or even one-third to the above figures, for they pack in all their miscuts and edgings with the shingles, and if there happens to be too many clippings, as there sometimes are, they make up the thickness of the centre of the bunch with sawdust.

Take cedar logs, Mr. Editor, at from \$10 to \$13 per 1,000 feet, which is the price at which they are being sold here, and apply the above figures, and then tell me if you can, how any mutton-headed shingle manufacturer can claim to be able to make an honest shingle and sell them in even any one of the first four kinds above named, at \$1.50 per thousand? Yet we have men who claim they can do it. Would you want their shingles on your buildings, reader?

The above interesting letter was received from a prominent British Columbia manufacturer, who prefers to have his identity unpublished. The editor would be pleased to hear from others who are interested.

The St. John River Difficulties

St. Leonards, N.B., Nov. 15th, 1909.

Editor "Canada Lumberman":—

A copy of the "Canada Lumberman" of November 1st has been sent to me and I wish to thank you for the notice taken of my letter to the St. John "Telegraph." You are certainly right in saying that the difficulty between the operators of the upper and those of the lower St. John is due solely to the lack of the waters now diverted from their natural channel. That the difficulty lay just there was appreciated by the Cabinet Ministers when, in their speeches in the House concerning the appointment of the Commission, Hon. Dr. Pugsley, Minister of Public Works, and others, spoke of this and nothing else as the question to be considered by the Commission. Influences have been brought to bear on the Commission to cause them to take up valuable time with other things having no bearing whatever on the issue.

In view of the statement of the counsel for the United States commissioners that the question of the stolen waters cannot be considered by the Commission, being beyond the scope of their authority, Dr. Pugsley's words in Parliament, March 22, 1909, expressing our Government's view of the matter, have special significance. He said: "This diversion of the waters of the Allegash from the River St. John into the Penobscot, as my right honourable friend has said, has been the cause of a great deal of dissatisfaction on the part of the people living on the St. John river, and it has led to very serious difficulty on several occasions; and I think I am safe in saying that on more than one occasion it has almost led to bloodshed." He goes on to mention the diplomatic communications in which he had been a factor, and the difficulty caused by the State of Maine legalizing the theft by legislative act. Note these sentences which give the key-note to all the speeches in the House: "It is a very important fact that in the Waterways Treaty which has been submitted to Parliament it is expressly provided that there is reserved to each country the right to insist upon the necessity of navigation being preserved; and that neither country shall have the right to divert any waters flowing into boundary waters or boundary rivers which would in any way materially lower the level of the water or interfere with navigation. If this treaty should become law we shall have in it a recognition of that principle and that right, and the logical consequence which I hope will follow at no distant date will be that the United States Government

will take steps to do away with the provisions which have been made for the diverting of the waters of this very important river into a river in the State of Maine and allowing it to flow again in its natural channel."

That does not sound as if it was beyond the scope of the Commission's inquiry. It was the only issue mentioned on the floor of the House in connection with the appointment of the Commission.

The speech of Hon. James Connlee showed what the United States had done in other cases exactly similar, quoting decisions of Mr. Evarts, Secretary of State of the United States, bearing out in full the Canadian position.

But I am making my letter too long. I want to add that the development of our province through the new power at Grand Falls will be mightily hampered for lack of that water. It is not in the spring floods it is missed; it is in the season of drought and low water. Then the steady flow from the great reserve storage will increase the advantages, the utility and the value of that great power a hundred per cent. The province, through all its sections, cannot afford to lie supine while it is despoiled of its natural resources. Don't overlook the immense area of the drainage basin of whose benefits we are despoiled. In addition to its hundreds of square miles of lake surface, it extends over 1,500 square miles of land, all forest covered. If the whole State of Rhode Island were laid down in it there would still be a good sized border left around. Again thanking you, I am, yours truly,

D. O. Bourgoin.

Meeting of Supreme Nine and House of Ancients

A joint meeting of the Supreme Nine and the House of Ancients of the Concatenated Order of Hoo-Hoo was held at Chicago during Nov. 17, 18 and 19. The attendance numbered about 60, and many matters of much interest to the Order were discussed. Mr. B. A. Johnston, Seer of the House of Ancients, called the meeting to order, and it was presided over jointly by Mr. Johnson and Mr. W. A. Hadley, of Chatham, Ont., Supreme Snark of the Universe. This was the fourth joint session of the two bodies, and those present included delegates from the House of Ancients, the Supreme Nine and lay delegates.

Important addresses were delivered by the Supreme Snark of the Universe and the Seer of the House of Ancients, both of whom presented practical suggestions for the benefit of the Order.

A great number and variety of suggestions were received and discussed during the second day of the meeting. Among the proceedings were the following:

Voted a contribution of \$250 to the Cherry mine disaster relief fund.

Authorized the House of Ancients and Supreme Nine to employ a high class travelling representative, to be known as the "Supreme Representative."

Gifford Pinchot, Chief Forester of the United States, elected an honorary life member of the Order, exempt from initiation fees or dues, and he and his policies were endorsed in a strong resolution in part saying: "We endorse the stand Mr. Pinchot has taken in all these matters; and be it further resolved, that this especially has reference to the attitude he has taken for the benefit of the whole people as opposed to the policies of the Secretary of the Interior."

Instructed Scrivenoter to report to annual meeting relative to the work of securing positions for members.

Hoo-Hoo territory of United States, British North America and Mexico divided into nine jurisdictions, each jurisdiction to be represented on the Supreme Nine.

Recommended to the Vicegerents that a Hoo-Hoo banquet or "On-the Roof," is held to better advantage usually in the afternoon or evening between 6 and 8 o'clock than a smaller lunch, poorly attended, late in the night.

Changes were made in the constitution and by-laws relative to limitation of membership, eligibility and election of candidates.

Authorization of a plan to provide for a death benefit fund, the plan to be drafted in every detail by a committee already appointed, to be submitted for approval to the House of Ancients and Supreme Nine, and then put into effect.

Rescinded action at Hot Springs regarding changing the Hoo-Hoo button, and authorized the use of the old, or large, button.

Number of handbooks to be issued for 1910 to be restricted.

Method of nominating place of holding annual meeting changed.

Time and manner of holding concatenations changed. Programme to be prepared covering them.

Scrivenoter authorized to inaugurate a special campaign to get back desirable people who have resigned. Also to go after delinquents in a special way.

Vicegerents to be instructed by Scrivenoter to hold concatenations in accordance with the ritualistic ruling, referring especially to the regulation hall.

No member eligible to office in the Order whose dues are not paid in advance covering his period of office.

Vicegerents will be automatically suspended if they do not return ritual within specified time after expiration of term of office.

C.P.R. Increases Freight Rates on Pacific Coast Shipments

The C.P.R. will put into effect on December 6th a new tariff on Pacific coast products. There is a general advance to points in Ontario west of Toronto. Sarnia and Windsor are advanced 4 cents to 75 cents. Niagara Falls, St. Catharines, Hamilton, London, etc., are advanced 2½ cents to 75 cents. The Toronto rate on shingles remains the same but on lumber there is an advance of 2 cents to 67 cents. Information reaches us that the Mountain Lumbermen's Association and the British Columbia Lumbermen's Association have waived all objections to the advances. This is not understood very thoroughly by the dealers in Ontario, who usually put up a strenuous fight when advances on rates are proposed. Outside of the Toronto market for fir lumber there is very little of it sold throughout the rest of the province. The advance amounts to about 65 cents a thousand feet on British Columbia fir, and as it is sold somewhat cheaper than southern pine—mostly 32 feet and up in large dimensions—the railway company will probably be able to reap the full advantage of the advance without assisting southern pine competition.

Personal Items of Interest to Lumbermen

Mr. John Ostrom, lumber merchant of Pembroke, Ont., has opened some nickel mines near Fort Coulonge.

Mr. A. E. Kaiser has been recently appointed auditor and cashier of the Cleveland-Sarnia Saw Mills Company, Limited, with office at Sarnia, Ont.

John McEwan, of Dolson & McEwan, who have been operating a sawmill near Blind River, Ont., has bought a residence in Bay City, Michigan.

Mr. D. L. Davidson, of Chew Brothers, Midland, who for some time has occupied the position of bookkeeper, will sever his connection with the company this fall. He intends to take a course at a business college.

W. A. Hadley, of Chatham, Ont., and T. Patterson, of Hamilton, Ont., attended the joint meeting of the Supreme Nine and the House of Ancients of the Concatenated Order of Hoo-Hoo at Chicago on Nov. 17, 18, and 19.

Prof. E. J. Zavitz, of the Ontario Agricultural College, Guelph, Ont., has returned from Rondeau Park, Ont., where he was engaged in marking the trees which, owing to maturity or decay, should be removed in the interests of forestry.

Mr. Jas. H. Lavallee, of the Orillia Export Lumber Company, Orillia, Ont., is on a business trip to Slocan and Vancouver, B.C., in the interests of the Ontario Slocan Lumber Company, of which he is secretary-treasurer. He expects to return from the West about the beginning of December.

Mr. William Hunter, the Conservative member-elect in Slocan, B.C., is well known among the lumber fraternity. He has been a resident of British Columbia almost continuously for the past 25 years and of the Nelson and Slocan districts for 20 years. In 1891 he located the town of Silverton, where he at present lives. Mr. Hunter is interested in lumbering, mining and mercantile business.

Mr. E. N. Lewis, M.P. (West Huron), will again introduce in Parliament this session the question of an export duty on pulp and pulpwood. His resolution this year will provide for the imposition of an export duty on pulp and pulpwood, with the proviso, however, that if the United States will admit Canadian paper free, the export duty on the raw material will not apply.

Mr. Martin Burton, the well known lumberman of Barrie, Ont., sustained a serious loss during the fire which occurred on Nov. 17th at Barrie. The block which was destroyed included Mr. Burton's offices. He lost all his office furniture and fixtures, valued at about \$500 and fully insured. The most serious part of his loss, however, was the destruction of many of his business and personal papers, which were in his desk. Mr. Burton has taken new offices in the Bank of Commerce block and is already carrying on his business as usual.

Mr. J. S. Willison, editor of the Toronto "Evening News," in an address before the Wholesalers' and Manufacturers' Association of Detroit, delivered an address upon the subject of promoting better trade relations between Canada and the United States. In the course of his remarks Mr. Willison made the following reference to the lumber situation: "Canadian restrictions upon the export of pulpwood and sawlogs cannot be properly described as discriminatory (although they do chiefly affect the United States), because they apply alike to all countries. And I am bound to say that the provinces are unlikely to consider any reversal of policy, and there is no doubt that the movement for a Federal export duty will become more formidable."

E. Lacasse, Hemmingford, Que., sawmill proprietors, held a meeting of their creditors on Nov. 26th. The Beaudry Woodenware Manufacturing Company, of Montreal, Que., held a meeting of their creditors on November 27th.

Business Reports Indicate Expanding Trade

The Cleveland-Sarnia Sawmills Company, Limited, have built an addition to their mill No. 1, at Sarnia, Ont., and in the near future they will erect a planing mill. The addition to the mill enables them to increase their output, and when the planing mill is built they will be in a position to furnish mixed cars of all kinds of lumber to the trade.

The company have also enlarged the supply of their raw material, by the recent purchase of the south-east quarter of Foster township. They have erected a set of camps on the new limits, and expect to cut about 70,000 sawlogs thereon this winter. Their camps are well filled up with men of the old time class. The sawlogs are being skidded at a lively rate and the company expect to put in the largest crop they have ever lumbered in Canada.

Referring to trade conditions, the company report a strong demand for lumber. Their travellers find the demand increasing and report that trade in general is good. The demand for lumber, they say, is greater to-day than at the corresponding period in 1906. Prices are stiffening and the consensus of opinion is that by spring there will be no question of price, but one of whether the goods can be obtained. The box business all over the country, they find has improved greatly and buyers are plentiful for that class of lumber. In conclusion, they say, "the lumber business never looked better and the prospects were never brighter than to-day."

Mr. J. A. Letherby, wholesale lumber dealer, of Midland, Ont., reports that he finds business conditions materially improved. In the cities of western Ontario particularly. There is a noticeable stir among the retail yards, as a result of the great building activity. Hemlock and birch, he reports, are not so active as other lines, and hardwood dealers are not buying quite so much as they were a short time ago. The market for pine, however, is a great deal better. Contrary to reports from a number of the northern lumber manufacturers, Mr. Letherby states that he finds it difficult to buy low grade lumber in large quantities, although the price for these classes is a trifle lower than it recently was. Mill culls and mill cull sidings are not quite so firm as other low grades, but dead culls are quite firm and hemlock, he reports, is looking up. Mr. Letherby has recently branched out in the building line and is erecting quite a number of small frame houses, costing from \$550 to \$900, for which he states there is a growing demand in his district. In this way he finds a profitable use for a large quantity of stock.

The Dominion Wrought Iron Wheel Company, of Orillia, Ont., report that business is extremely good. They are in close touch with the conditions prevailing in the lumber markets and find a good demand for the various kinds of lumber conveyances which they manufacture. So large has the demand been during the latter half of the summer that they have been obliged to increase their capacity. They have made more room in their factory by means of erecting a storage house for the finished products on an adjoining lot. The new building is 100 by 32 feet. They have also nearly completed a building for the accommodation of their iron before it is worked up into various products. This building when completed will be 32 by 50 feet. By this means the company will be able to handle their business much more conveniently.

A Dominion Government report on slides and booms has been issued, showing a big decline in the number of logs that came down the Ottawa river in the summer of 1908, compared with the summer before. The number was 4,000,000, or a drop of 500,000. Low water in 1908, causing the logs to be stranded along the stream, is the official reason for the falling off. In the summer of 1908, 3,296 pieces of square timber came down, and 500,000 railway ties, as against no square timber the season before, and 386,000 railway ties. Cedars increased from 32,000 in 1907 to 90,000 in 1908. The number of pieces for the last summer, though not recorded officially, is understood to be more than in 1908, especially in sawlogs.

Throughout Ontario there is a universal report that good men for the camps are scarce. In some of the Georgian Bay and Ottawa valley camps wages are as high as \$35, and good men are scarce at that figure. Operators are figuring on an increased cut and the shortage of men will be somewhat of a handicap. The low wages of last year and the inducements of western Canada have drawn off large numbers of the old time camp hands.

A despatch from Hull, Que., states that with the approach of winter hundreds of men have left for the shanties. Most of the big concerns have already got their gangs up north. R. & T. Ritchie, lumber people of Aylmer, sent up 85 recently; Fraser & Deschenes sent up almost 200 men. J. R. Booth has stopped the night shift in the mills and the men thus disengaged have been sent up north.

Attention is directed to the card in this issue relating to timber maps. Mr. J. H. Patterson, formerly with the Ontario Survey Branch, is prepared to furnish to order timber and township maps in any section of New Ontario.

Conveyor Plant for a Pulpwood Mill

Sawn Pulpwood Delivered in the Yard without Manual Handling—
Interesting Labor Saving Installation at E. B. Eddy's Yard at Hull, Que.

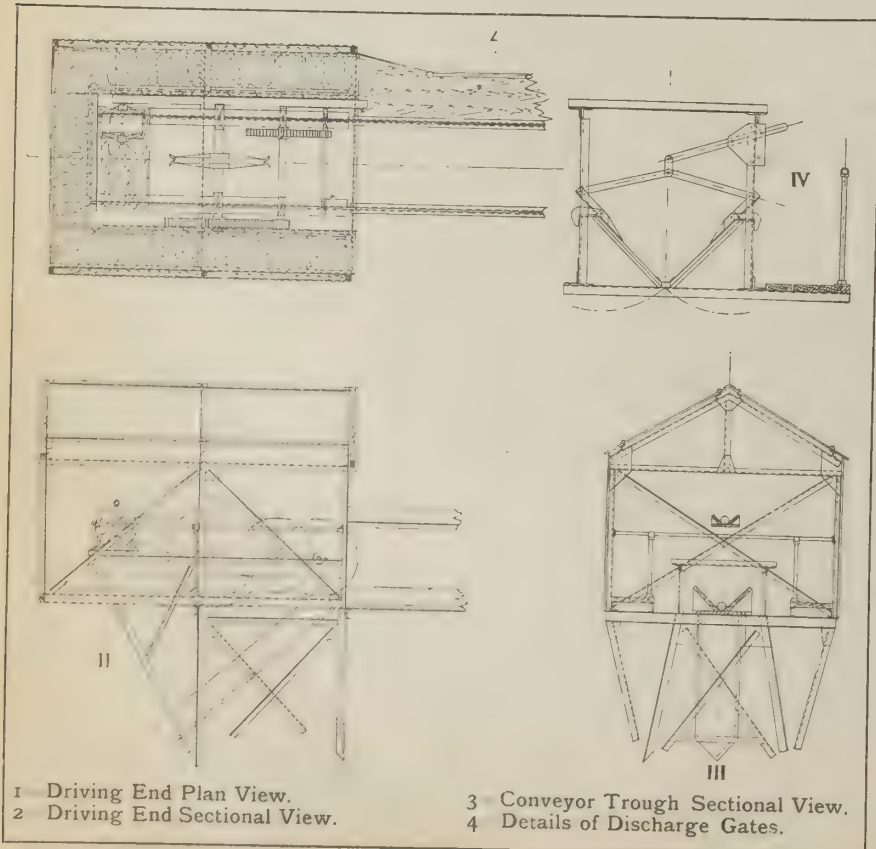

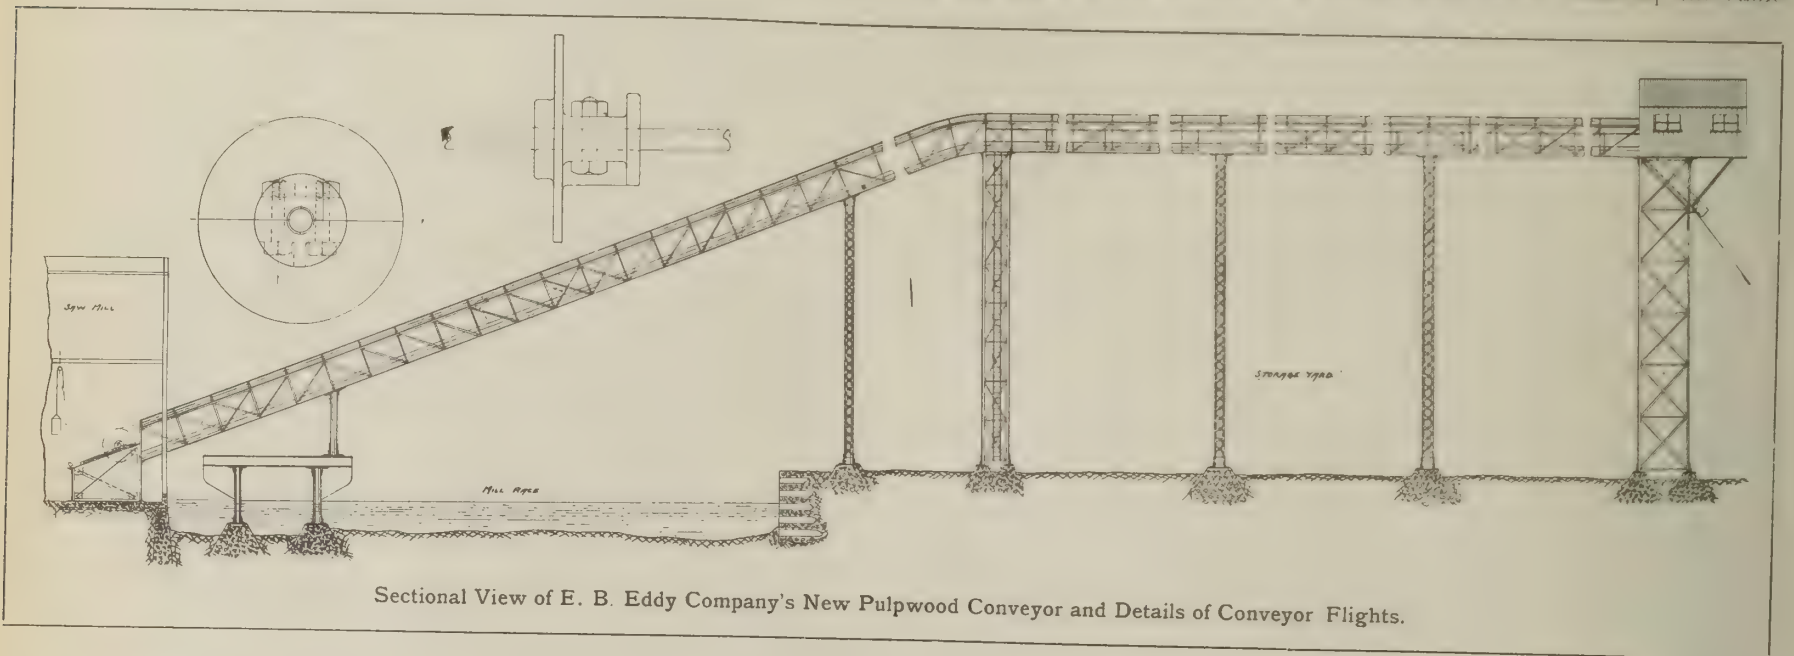

Among the most enterprising lumbering firms in Canada, the E. B. Eddy Company, of Hull, Que., hold a prominent place. They are always on the watch for modern methods of operation, and one of their latest moves was the installation of a wood conveyor, for carrying wood from the company's pulpwood sawmill to the end of the Aylmer road pulpwood yard, where storage is provided for. The accompanying illustrations give a good idea of the construction of the conveyor.

The conveyor is all steel, 500 feet long, and it will pile from seven to eight thousand cords of pulpwood for this winter's use. The conveyor, which is 65 feet high, is operated by a cable and clutches travelling about 125 feet per minute, as the capacity of the sawmill is seven or eight 16-foot lengths of from 6 to 24-inch in diameter per minute, and the conveyor has to keep the mill clear.

Before putting this conveyor in, the Eddy Company drew their wood by team and piled by hand, which was a hard, wet and expensive job; now the conveyor drops the wood in big piles at different points, thus saving all handling, hauling and piling. The conveyor was built and erected by the Jeffrey Manufacturing Company, of Columbus, Ohio, whose Canadian office and works are located at Montreal.

The general layout of the plant includes a Jeffrey cable flight conveyor of approximately 500 feet centres, receiving the material, which is 24-inch pulpwood, from the saw-house and delivering the same to the wood yard at an elevation of 65 feet above the wood yard level. The entire supporting framework of this installation is made of structural steel, involving about 60 tons in its construction. The conveyor has a capacity for handling about 500 cords of wood per day, and delivering the same to wood yard through valves spaced at intervals in the discharge or carrying side of the conveyor. These valves, fourteen in number, can be opened or closed by a toggle joint operated valve in order to distribute the pulpwood uniformly over the yard. The cable used is $\frac{3}{4}$ -inch "Dragon" brand, non-stretchable, upon which are mounted at intervals of three feet 6-inch conveying clamps. The conveyor is driven from the head, or delivery end, by a 3-phase, 25 h.p. motor, and it was proven by tests that less than 20 h.p. was required to operate this conveyor at full load.

The special feature of this conveyor consists of a Jeffrey flexible tooth expansion rim cable sheave, which has several features to recommend it, the first of which consists of a flexible tooth which backs up the cable

and prevents the same from snapping off the sheave as the cable and flights are delivered from the sheave. The expansible rim feature allows of an adjustment in the pitch to compensate for the wear of sheave and flights, and, furthermore, for replacements or sheave renewals, it is possible to replace portions of the expansible rim without going to the expense necessary to replace the entire sheave. This sheave has rendered it possible to make a successful cable conveyor of the scraper type.

The installation of this cable conveyor in connection with the conveyors used in the saw-house of the E. B. Eddy Company renders it possible to take the pulpwood from the river, pass it through the saws, and deliver to the wood yard without any manual handling whatever.

Mr. L. J. Labelle, of Lakefield, Ont., local manager of the Cavendish Lumber Company, has returned from a trip of inspection of the company's lumber camps in the Cavendish township. They have a large number of men at work, and expect, under favorable weather conditions, to make a big cut of logs.

The rafting operations at the Penobscot boom in the State of Maine have been completed and the work is about through for the season at the great distributing point for the logs which are cut on the east and west branches of the Penobscot river and its tributaries. The reports from the boom show that nearly 120,000,000 feet of logs have been rafted there and it is expected that work that has not been reported will bring the amount up to 131,000,000 feet when all the reports are in. There were more new logs handled at the booms this year than in the previous season by several million feet. In 1908 there were 113,500,000 feet handled, but there were about 9,000,000 feet wintered in the booms which were received in 1908 and not rafted till this season.

Close of Navigation at Montreal

Quieter Market Follows Cessation of Shipments—Lath Scarce—Shingles Firm

Office of the "Canada Lumberman."

Montreal, Nov. 27th, 1909.

A quieter market, the inevitable result of the close of navigation, is the outstanding feature of the Montreal lumber trade. Upper grades of lumber still continue in good demand and common stocks are showing signs of rallying in the near future. A feeling of optimism for the spring trade is generally prevalent and from the present outlook there is every reason to hope for a splendid season next year.

Upper grades of spruce and hemlock are quoted firmly. In the merchantable grades there is already considerable scarcity of certain sizes of scantlings, with prices gradually advancing, causing a naturally increased value for random stocks.

Spruce and hemlock culls are in better demand at the present time, and there is also considerable trading in "O" cull pine, in wholesale quantities. Dealers as a result are inclined to feel that prices for these lines have at last reached their lowest figure.

Lath continue to hold their value on the market, and are reported very scarce in some circles. Several of the local men, however, are inclined to view the advance in lath as rather speculative and state that middlemen are well supplied with stocks.

Upper grades of white pine are in good demand and prices continue to range firm. The European and American markets have been purchasing our white pine extensively, and these markets should still provide an outlet for any surplus stocks.

All upper grade hardwoods are quoted firmly, with an excellent demand. Quartered white oak is perhaps the feature and shows no tendency to fall off from the high figures quoted.

Shingles. Price quotations on shingles remain firm and the demand is quite brisk, with the mills realizing the prices that they have been holding out for. Better grades of shingles are moving more freely to the American market, while the Quebec trade in second clears is reported very active at the present time. The Ontario trade has assumed a quieter character.

Following are revised current wholesale lumber prices for Montreal:

1-in., 2-in. and 3-in. pine log run mill culls out	\$27.00 to \$30.00
1-in., 2-in. and 3-in. pine log run dead culls out	24.00 to 26.00
Pine "O" culls	13.00 to 14.00
Pine mill culls	17.00 to 19.00
Spruce flooring, sheeting, etc., No. 1	24.00 to 26.00
Spruce flooring, sheeting, etc., No. 2	19.00 to 21.00
Merchantable spruce boards	16.50 to 18.00
2-inch merchantable spruce	16.50 to 18.00
Cull spruce boards	14.00 to 15.00
2-inch spruce culls	14.00 to 15.00
1½-inch spruce mill culls	15.00 to 16.00
Spruce scantling, 3x 3, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 2x 3, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 3x 4, 12 and 13 feet	16.00 to 17.00
Spruce scantling, 2x10, 12 to 16 feet	19.50 to 21.50
2-inch (scant.) x 9, fifth quality, N. Y. "outs"	16.50 to 18.00
Oak, 1sts and 2nds, quarter white	87.00 to 90.00
Chestnut, 1sts and 2nds, 1 inch	50.00 to 52.00
Birch, 1-inch log run, mill culls out	18.00 to 20.00
Maple, 1-inch log run, mill culls out	18.00 to 20.00
Basswood log run, mill culls out, 1x4 and up, winter sawn	24.00 to 26.00
Basswood log run, dead culls out, 1x4 and up, winter sawn	20.00 to 24.00
Laths, mill run, spruce, 1½-inch x ¾-inch, 4 feet	3.00 to 3.25
Laths, pine, No. 1	4.00 to 4.25
Laths, pine, No. 2	3.25 to 3.50
Laths, pine, No. 3	2.50 to 2.75
Shingles, clear	2.90
Shingles, 2nd clear	2.25
Shingles, extras, 1's	1.50
Merchantable hemlock boards	14.50 to 16.50
2-inch merchantable hemlock	14.00 to 16.00
Cull hemlock boards	12.00 to 14.00
2-inch hemlock culls	12.00 to 13.50

The pulp and paper outlook in this district is decidedly better. The demand for all grades of paper is splendid and the good grain crop in the West this year has placed next season's trade in a very satisfactory position. Unbounded confidence is expressed throughout the West in what 1910 will do for business.

The demand for newspaper in the United States has helped Canadian mills wonderfully and they are all operating to full capacity at the present time, with their output practically sold up.

A peculiar feature of the past season's trade was the excellent water power conditions existing in Canada, while our neighbors to the south had such small rainfall, that water power streams there were lower than ever before. As a result the American production of ground wood, wood pulp and newspaper was very much diminished. Prices on the various pulp productions may, therefore, be expected to range higher from now until the spring freshets occur. A slight advantage may be gained through the January thaws, but this will be only a temporary help.

Some interest is being taken in the probable outcome of the tariff question. Whether a minimum or maximum tariff is to be enforced will not be known till March, but close inspection reveals no probability of the United States imposing maximum tariff rates on this country. Trade under the new tariff, between both countries, has increased largely and it is generally believed that the present rates will not be disturbed.

It is anticipated that the cut of pulpwood in the coming season will be the largest in years, since this is the last season that the United States market can receive pulpwood from the public lands in the Province of Quebec.

Personal and Business News from Montreal

Mr. Geo. C. Goodfellow has returned from a trip through western Ontario and reports satisfactorily on the trade conditions in that section.

Mr. C. A. Spencer reports the closing of a contract with an eastern mill, for the delivery of a very large line of kiln dried spruce, during the coming winter and spring.

Messrs. G. A. Grier & Sons report that they expect to cut in the neighborhood of six million feet of spruce and hemlock at their Lachute, Que., mills, while approximately two and a half million feet will be manufactured at the Mount Tremblant, Que., mills of the company.

It is encouraging to note that the outlook for the spring trade with the New York market is exceedingly bright. Mr. Arthur H. Campbell, of the Campbell, McLaurin Lumber Company, has just returned from a trip to New York, and from the extensive building operations under way and those planned for next season, Mr. Campbell predicts a good demand from that direction in the spring for our lumber.

The Western Lumber Company, of Montreal, are preparing for their spring trade in spruce, and by January expect to have closed contracts for a cut of several million feet with various mills. Mr. Leon Gagne, Jr., manager for this company, has just returned from a monthly trip to New York, and states that the market conditions there show a gradually improving tone.

Mr. W. K. Graftey, manager of the Montreal Lumber Company, Limited, is back from an extended business trip through the Georgian Bay districts. On the whole, Mr. Graftey found that the outlook in the different lumber centres is apparently satisfactory. The demand for better grade of good lumber is good, and would seem to warrant a good winter's cut unless a shortage in shipping culls and better grades is to be faced in the spring.

The J. & W. Duncan Lumber Company are shantying this season on the Canadian Northern in the vicinity of St. Jerome, and state that they are experiencing the best season in the woods that they have encountered in the past ten years. Their cut of spruce this year will be well over three million feet. The company have, during the past season, raised the water in Sixteen Island lake, where their mill is located, by three feet, and have thereby obtained a more efficient power.

The James MacLaren Company, of Buckingham, Que., have had an electric log piler in operation since the middle of November, and have found it to be a very serviceable method of handling logs. The installation is rather unique, in that the electric motor is located on a float in the eddy. The logs are hoisted to the rollways by means of an endless chain, and the outfit is driven by an electric motor.

The Hilder Daw Construction Company, of Montreal, have recently completed a store building at 74 St. Peter street, for the John W. Peck Company, in which birch flooring and sheeting was used entirely. The excellent effect that is obtained here by the use of the varnished birch furnishes a concrete example of the possibilities of this, at present little used, hardwood. In the opinion of many, birch could often be used to advantage in place of some of the higher valued woods. Chestnut, for instance, produces a particularly striking effect with its elaborate grain, but the lighter colored and quieter birch should, on its merits, rapidly find popularity in the eyes of the best architects, and it is most frequently with the men of this profession that the decision of the wood to be used rests.

The departure of the C.P.R. liner "Montreal," on Nov. 19th, well laden with lumber, practically brought navigation to a close in the port of Montreal. The last week around the harbor front everything was bustling activity, and lumber exporters in many instances were forced to work their men day and night in order to place their shipments of lumber safely on board the outgoing vessels.

The congestion on the docks and in the sheds, due to the heavy incoming cargoes, was the chief cause of the trouble, and the inadequacy of the Harbor Commissioners' sheds for handling the present traffic was never more realized. To determine how conditions could be remedied is a difficult matter, but in the opinion of a prominent lumber exporter, separate outgoing and incoming sheds will inevitably have to be adopted.

Methods of transshipping from dock to vessel and vice versa are comparatively slow here, when systems such as those in vogue in Liverpool are taken into consideration.

Lumber Matters in the Law Courts

Important Test Case on Insurance—Ontario Government Takes Control of Log Canal

Unlicensed Insurance Companies—A test case of much interest to lumbermen on account of its bearing upon the insurance of lumber plants and yards, in unlicensed companies has been decided in the case of the King v. Willis Faber & Company, Limited, at Montreal. Judge Leet held that the Lloyds, of England, and other similar concerns, might do business in this country without obtaining a Dominion license. Judge Leet declared that it was ultra vires of the Federal Government to force the Lloyds or any other unlicensed companies to take out Federal licenses or make annual returns to the Government, or to make the deposits which the law demands. Three grounds of defence were raised by Willis Faber & Company; first, that they represented the insured and not the insurer; second, that Lloyds is not a company within the meaning of the Insurance Act; and, thirdly, that the Federal Insurance Act was ultra vires. Judge Leet maintained the claims of the prosecution on the two first points, and decided as above stated on the constitutional question.

Diversion of Waters for Log Driving—The Ontario Government has decided to expropriate the log canal at Lake Metagamasing under the Public Works Act. The property is at present owned by Messrs. Patrick Shannon, Pembroke, and Louis Simpson, Valleyfield, Que., and notice of the impending action is given by Hon. Dr. Reaume, Minister of Public Works, in the Gazette. Some years ago, with the view of aiding the lumbermen of the Sturgeon river watershed, Mr. Charles Beck, of Penetang, made a small canal through the divide between Lake Metagamasing and Lake Wahnapiatae for the purpose of carrying logs from the Sturgeon river route to Lake Wahnapiatae. The divide between the waters at this point is very narrow (less than half a mile), with a considerable fall between the lakes. By making this cut, logs could be taken from Sturgeon river into Wahnapiatae and landed in Lake Huron the same season, whereas if they were floated round by Sturgeon river it would require two years.

The institution of court proceedings prevented Mr. Beck and his colleagues from continuing to divert the waters from one watershed to the other. Owing, however, to the fact that valuable timber limits are located in the upper valley of the Sturgeon and that a large amount of pine is yet to be taken out, and that a season in floating timber can be saved by the cut-off, the Government has taken steps to assume and operate the canal under prescribed restrictions as to the use of the water. The Government, it is understood, has taken this action as a result of an intimation by the courts that while private parties cannot divert a natural waterway, it is within the province of the Crown to do so in such a case as the present, when the commercial results warrant the action.

The preliminary examination into the charges against John Hintz, a Rosthern, Sask., farmer, has been completed and J. H. Young, J.P., has dismissed the case. The charges were laid by A. C. Fraser, representing the Edmonton Lumber Company, the D. R. Fraser Company, and the John Walter Company, all of Edmonton, and were to the effect that Hintz had appropriated to his own use a number of logs which had floated down the river from Edmonton.

In the case of Williams v. Michigan-Pacific Lumber Company, at Victoria, B.C., application has been made to Mr. Justice Irving to appoint an arbitrator, and Judge Lampman has been appointed for that purpose.

Mr. Justice Clement has given directions that the Great Northern Railway Company give adequate crossing facilities to the British Columbia Mills, Timber & Trading Company at White Rock, near Blaine, B. C.

Trade Report from West Indies

S. P. Musson, Son & Company, Barbados, report under date of Nov. 6th as follows: Lumberstuffs, W. pine—Arrivals during the fortnight consist of the trn. schr. "Inga" from Bridgewater, N.S., with 209,000 feet which had been sold to arrive at \$29.50 and \$21.50 for merchantable and second quality respectively; the schr. "Russell H. Pentz" also from Bridgewater, with 122,000 feet, for which consignees obtained \$30 and \$22.25; and 89,000 feet ex trn. schr. "Ponhook," which was sold at same price as the "Inga's" cargo. The inboard cargo of the trn. schr. "Evelyn" mentioned in our last consisting of 150,000 feet, has also been sold here at \$30.06 and \$22.25. These cargoes have about filled present requirements, and we know of another lot of 150,000 feet now on the way, which will keep the market supplied. Spruce—The only arrival in this class of lumber has been the trn. schr. "Ponhook," from Port Medway, N.S., with 190,000 feet, which consignees had previously sold at \$24.75, and \$20.75, but there is another cargo of 200,000 feet now due. Previous to the arrival of the "Ponhook" the market was quite bare and further shipments would probably realize good prices. Pitch pine—No arrivals, but as mentioned in our last, the "Mizpah" with 400,000 feet second quality is now about due. Shingles—There

have been no arrivals of either Gaspe or cedar laying; former in fairly good demand, but a large cargo of the latter is now on the way. Shooks—The four-masted schr. "Lewis H. Goward" arrived on the 26th ulto. with 19,000 bundles Portland, half cargo to selves, which had been contracted for some time ago, and another cargo is now about due. The "Korona" brought 661 bundles molasses hogshead shoos, which consignees have not yet offered. Wood hoops—No receipts, but supplies are expected.

Since the above was compiled the bgtne. "Mary Barry" has arrived from Portland, Me., with a cargo of 11,021 bundles shoos, which are also to fill previous contracts.

Obituary

Mr. James E. Defebaugh, editor and proprietor of the "American Lumberman," of Chicago, died in that city early on the morning of Nov. 21st. The news of Mr. Defebaugh's death will be received with sincere regret by the lumber world. He was well known to Canadians and was highly respected for his manliness and integrity. Mr. Defebaugh was a man of many parts. Although closely identified with the active editing and managing of the "American Lumberman," he found time to travel all over the country and abroad. He was a close student of business conditions. As an authority upon lumber matters, he undertook to direct the recent campaign in the United States against the reduction of the tariff on lumber entering the United States. While his work in this direction was not entirely successful, it was partially so, inasmuch as the campaign resulted in the proposed reduced duty being considerably increased. As an authority on lumber trade matters, Mr. Defebaugh's opinion was continually in demand. The great strain of the tariff campaign undermined his health and he was obliged to take a long rest. Death was due to a cancerous growth, which with an impaired constitution, he was unable to fight. Mr. Defebaugh was active in civil, religious and philanthropic movements. He was a frequent visitor to Canada, where he had made many warm friends. He was born in 1854 and leaves a widow and one son.

George A. Hunt, of Rutherglen, Ont., died in the Mattawa hospital on Nov. 1st, as a result of injuries received in a runaway accident. He was driving homeward, when the horse became unmanageable and Mr. Hunt was thrown out with great violence, receiving fatal injuries.

Mr. Hunt was a comparatively young man, having been born at Middleport, Ont., in 1861. He followed the lumbering business all his life, and entered business on his own account at Ruscomb, Ont., about ten years ago, having been employed previously as foreman by various lumber firms. About two years ago, Mr. Hunt moved to Rutherglen, and took a two-thirds interest in the Glenn Lumber Company, of which he was manager at the time of his death. Mr. Hunt was a man of powerful physique and an energetic worker, a member of the Methodist church and an Oddfellow. The remains were taken to South Woodslee, Ont., for interment in the family plot. His death came as a great shock to his family and friends, as he was widely known and a universal favorite. He is survived by his widow and four daughters.

It is said that misfortunes never come singly, and eleven days after Mr. Hunt's demise, his sawmill was burned to the ground, being a total loss. The mill was well equipped with saw, planing and shingle machinery. Fortunately, the stock of lumber, about 700,000 feet, as well as the shingles, was saved.

Mr. Herbert H. Gunter, of Fredericton, one of the best known lumbermen in New Brunswick, and president of William Richards & Company, Limited, was instantly killed by an I.C.R. shunting engine at Mowat's Crossing, near Campbellton, N.B., on Nov. 12. Mr. Gunter was 47 years of age and leaves a widow and two sons, William, in the employ of the William Richards Company at Campbellton, and Ralph, of Fredericton.

Mr. Gunter attempted to cross in front of the shunting engine, which was slowly pulling a train of passenger cars, when he slipped and fell directly under the wheels of the tender, which, with one of the driving wheels of the engine, passed over the body.

Mr. Gunter was a native of Nashwaak, being a son of the late Benjamin Gunter. He married a daughter of the late William Richards and was for years associated with his father-in-law in the management of the great lumbering industry which he carried on at Boiestown. Three years ago, after the property had been sold to the Miramichi Lumber Company, he removed to Fredericton, and had since made his home there.

Seattle, Wash., reports state that chartering in the lumber trade has not been brisk, but all rates are holding strong. It will take some time to work off the orders already under way, but with nearly 25 sailing craft loading at sound ports, in addition to three or four large steamers, a revival of chartering is expected before long. The inbound fleet of lumber carriers is a large one, but at the same time business is so good to Australia and the West Coast that there will be no shortage of cargoes. Coastwise the lumber trade is brisk and more steam tonnage is coming into sound ports to load.

Amendments Proposed to U.S. Pulpwood Tariff

A partial revision of the Aldrich-Payne Tariff Act is to be attempted in a series of resolutions to be introduced by Representative Mann, of Illinois, one of the chief lieutenants of Speaker Joseph G. Cannon in the United States House of Representatives. Mr. Mann's bill and resolutions are designed in part to avert a tariff war with Canada. In a statement issued to the press, Mr. Mann declares that "the country may well be alarmed at the danger of a tariff war with Canada growing out of the rates on wood pulp and print paper imposed by the terms of the Aldrich-Payne Act."

Included in the series of measures to be introduced by Representative Mann is a joint resolution postponing the application of the maximum tariff from April 1, 1910, to Jan. 1, 1911. Another resolution provides that the maximum tariff of the United States shall be held not to apply to wood pulp and printing paper imported from Canada.

"A bill to encourage and promote commerce between the United States and the Dominion of Canada," which will be introduced by Mr. Mann, provides that Canadian wood pulp and print paper shall be admitted free of duty "on the condition precedent that Canada or the provinces in which wood pulp or printing paper is manufactured shall not forbid or restrict or impose any import duty or export license fee on printing paper, mechanically ground wood pulp or wood used in the manufacture of wood pulp." The subject of the commercial relations of the United States with Canada is now under serious consideration by the Tariff Board, which is acting under the instructions of the President.

Robb Engineering Company's New Quebec Manager

Mr. R. W. Robb, of the Robb Engineering Company, of Amherst, N.S., has been appointed manager of the company's interests in the Province of Quebec, with headquarters in the Canadian Express Build-

Mr. R. W. Robb.

ing, Montreal. Mr. Robb will control the sale for this district of the well known Robb-Armstrong engines and Robb-Mumford boilers, including water tube, internally fired, and other standard types of boilers.

Hon. W. C. H. Grimmer, Surveyor-General of New Brunswick, has given out an official statement of the receipts of the Provincial Treasury from territorial revenue during the fiscal year which closed on October 31st. The statements show that the promise made for an increased revenue from this important source have been more than fulfilled. Mr. Grimmer said:

"The total receipts from territorial revenue for the last fiscal year will amount to about \$395,000, and of that amount \$245,000 is in stumpage receipts. The previous year the total receipts from territorial revenue were \$343,292.77, or more than \$50,000 less than the receipts for last year. The estimate for territorial revenue for the past year was \$380,000, and it will be seen that we have exceeded that amount by \$15,000." Continuing, the Surveyor-General drew attention to the increase of about \$55,000 in the stumpage collections, which were about \$245,000, as compared with \$191,414.63 for the previous year. In the payments for stumpage the Shives Lumber Company, or Restigouche, are credited with the largest amount, the collections from that firm alone amounting to upwards of \$20,000.

Keenan Bros., Owen Sound, Ont., report that hardwood is strong in price and the supply is small. Hemlock they find is quiet.

Miscellaneous News from the West

A number of lumbermen waited on Premier McBride when at Revelstoke recently, with reference to perpetuity of timber licenses, and he advised them that he would accede to their request.

Statistics of the lumber industry in British Columbia show that the total number of sawmills is 204; capacity, approximate average, 8,080,000 feet a day; shingle mills, 45, with a capacity of 2,250,000,000 yearly; logging camps, 265; donkey engines and logging locomotives, 267; horses employed, 1,500; men employed, 17,000; number of mills closed, 17.

The B. C. Gazette gives notice of the incorporation of the following companies: Christie & Company, Limited, capital \$40,000, incorporated to construct, build and operate sawmills, shingle mills, sash, door and box factories and operate the same; J. A. Dewar Company, Limited, capital \$250,000, incorporated to carry on the business of timber merchants, sawmill proprietors, shingle mill proprietors, lumbermen, manufacturers of woodenware in all or any of its branches, pulp or paper manufacturers, etc.; Sechelt Logging Company, Limited, capital, \$5,000.

A Seattle, Wash., despatch says that since the new tariff law went into effect there have developed no evidences, according to the monthly reports of imports and exports, that the reduction of duty on lumber has any tendency to induce imports from British Columbia or other parts of Canada to the Puget Sound Customs district. On the other hand, the export of lumber has increased, the August report showing a total of 17,710,000 feet, and that for September 19,048,000 feet. Lumber manufacturers all say that not enough time has elapsed since the passage of the new tariff law to prove with any certainty what effect the reduction of the duty on lumber will have in this Customs district. C. E. Patten, manager of the Atlas Lumber Company, in an interview said: "The first effects of the new law will most probably be felt, if felt at all, in the middle west and Mississippi valley. Then, too, dealers in the United States may discover an advantage in dealing with Canadian manufacturers and have hardly had sufficient time to readjust their business relations. In the matter of shingles, it seems to be the general opinion that the increase of duty from 30 to 50 cts. per thousand will result in the entire exclusion of British Columbia shingles."

Another Large Newfoundland Company

The Labrador Pulp & Lumber Company, a British-American concern of which Messrs. R. H. Reid and D. Ford are vice-president and secretary-treasurer respectively, have taken over large tracts of land on the Labrador, where they will engage in the manufacture of pulp and lumber on a large scale. The areas concerned are situated at Sandwich Bay and Hamilton Inlet, the latter taking in some of the Alfred Dickie property and comprise some 2,000 square miles of well timbered lands, which have been purchased from their Newfoundland and Canadian owners, Messrs. W. C. and R. B. Job and J. W. Grant being amongst the former.

It is the intention of the company to have two manufacturing plants at Sandwich Bay and Hamilton Inlet, which will have a combined output of 140,000 tons of pulp and 30,000,000 feet of lumber. The mills will be of the most up-to-date kind and their construction is already contracted for. The contract calls for the completion of the work within two years from the spring of 1910, and operations will be commenced as soon as navigation opens next year. A number of engineers have been over the property during the summer and 5,000 logs have been cut and a quantity of stores of various kinds are now on the grounds in preparation for any work which may be done this winter.

Contracts for the disposal of the pulp to be manufactured are already made, and one with an Italian concern provides for the sale of 50,000 tons of pulp annually for seven years. The balance of the output will be disposed of in England. The lumber will be sold all over the world. The supply of timber is said to be inexhaustible and the water power is unsurpassed. At the completion of construction work it is expected to give employment to 2,000 men. The president of the company is Mr. John McMartin.

A St. John, N.B., report says that William E. Burton, manager of the American Dye Works, is at present engaged in the development of a scheme to make out of birch wood a sulphite equal to that which is obtained from spruce. The difficulty attached to the successful manufacture of birch wood into paper pulp lies in its color, which is a dark yellow not suited to the demands of commerce.

Early in the new year the British Columbia Railway Commission will hold a special sitting in Vancouver to take up the question of freight rates. The Railway Commission at its special sitting will also hear further complaints against railways not having proper guards to prevent the escape of sparks from locomotives, thereby causing fires in timber.

The Retail Dealer and His Problems

Questions of Interest to the Trade—A Well Known Ontario Company

A Successful Ontario Retailer

A business man who has "made good" solely upon his own merits and by persistent application is Mr. R. E. Butler, of the R. E. Butler Lumber Company, Woodstock, Ont. A comparatively young man as yet, Mr. Butler has accomplished much both in business and in public life and with the vigorous mind and body which are his, many further successes are likely to come his way. R. E. Butler was born in 1863 in Brighton, Ont. His education was obtained at the Brighton Public School and at the Forest City Business College, London, Ont.

Mr. Butler's business experience was commenced in the office of the Leishman Maundrell Lumber Company, of Woodstock, Ont., where he applied himself with such diligence to the work that one year later, when the firm opened a new branch yard in Stratford, he was appointed to the position of manager. Mr. Butler took to the lumber business so naturally that he quickly became acquainted with its details. After a year in the position of manager of the Stratford yard, the firm was made a joint stock company, and Mr. Butler became a shareholder and was appointed to the board of directors.

In 1896, Mr. Butler retired from the Leishman Maundrell Lumber company and started a wholesale and retail coal and lumber business in Woodstock in partnership with his brother, John Butler, under the name of Butler Brothers. The new business was successful from its inception. The business of Butler Brothers grew to such proportions that in 1902 they disposed of the coal business and devoted all their attention to wholesale and retail lumber. In 1906 Mr. John Butler retired from the firm, and from that date the business has been carried on by Mr. R. E. Butler alone, under the name of the R. E. Butler Lumber Company. Under Mr. Butler's care the operations of the firm have expanded continually until to-day they occupy an exceedingly enviable place among the industries of the city of Woodstock and vicinity. The company has a branch yard in Mitchell, Ont., where Mr. Graydon H. Butler is in charge.

Mr. Butler has now been in the lumber business for twenty years, fifteen of which have been spent in Woodstock. He has, during this time, become thoroughly in touch with all the details of the trade and the success he has had is due to this experience and to his determination to extend fair and honest treatment to every customer.

Mr. Butler's activities have not been confined to his business alone. He has always taken an active interest in the welfare of the city of Woodstock. His abilities have been recognized by his fellow citizens, whom he has served in the capacity of alderman. In connection with other public spirited citizens he has been instrumental and has assisted financially in bringing several industries to the city. Mr. Butler's services are sought after by various interests. He is president of the Altadore Club, Woodstock, and president of the Woodstock Agricultural Society. He has taken an active part also in the public life of the province, having contested the riding of North Oxford for the Ontario Legislature in the interest of the Conservative party.

It will be seen from the above that Mr. Butler is one of that excellent type of citizens which the lumber industry in its various branches has produced in such liberal numbers. His success he makes a stepping stone to further progress and to enlarging his usefulness as a citizen.

A writer on a retailer's equipment says: "If I ever build another large lumber shed, I will construct the foundation not only of lasting material, but in a way that will be strong enough to hold up all that can be piled on it without any settling. If there is anything I dislike to see about a lumber yard it is foundations that have settled, caused by their not being strong enough to bear the load that is put on them. If any other part of the shed or building gives way it can be repaired without any trouble.

R. E. Butler, Woodstock, Ont.—A Successful Retailer.

Questionable Retail Methods

By J. C. FRANK

Much has been said and written in regard to the ideals of retail lumbermen, but nothing more concise and at the same time comprehensive has been set forth, than that we become "merchants." How much this term includes and how much it excludes would certainly define its real meaning, but if we approach the task thoughtlessly and with narrow minds, it will mean simply a tradesman. If, with as much smallness of soul—as of mind—it will not exclude all manner of craftiness and trickery; in short, you at once emphasize the ugly character passing as a "retail lumberman," who has called forth the discussion for higher ideals and better standards among retailers. First of all, then, let us learn that the world has lost patience with the selfish idiot. It will not tolerate dishonest business methods any more than it will the daring of the highwayman, so if we are not actuated by higher motives in life, business policy suggests that we use intelligence enough to win trade upon an enduring basis. True, among retailers, there is often "a tempest in the teapot" that tempts us to do most anything to hold our own, but amid such trials we should bid Satan to get behind us. A great and good man has well said, "See a merchant in a storm at sea, and what he values most he will be sure to throw overboard last," so when our business craft is tempest tossed, even as a last resort, never throw overboard principle—rather let the old ship go to the bottom with colors flying. Then when we choose the term merchant to dignify our calling, whatever the term lacks in strict meaning, we must associate with it such principles and customs as will imply respectability and usefulness, and we will purchase to ourselves the confidence of our customers and of the commercial world. I do not plead for assumed dignity, but for real dignity.

Study to constantly improve the neatness, convenience and economy of your yard plant. This at once suggests how handy a little architectural ability is with us for personal use, and as further light breaks in on our stupid brains, we see how essential that we be able at least in minor construction to be, at least minor architects. Such knowledge will also enable us to understand somewhat the dialect of the professional architect, when we have business with him, as well as to enable us often to substitute other material than that called for both to our customer's pleasure and real advantage. Build up your stocks with such material as can be most reasonably secured and best adapted to your territory. We cannot afford to become specialists along any definite line, but we ought to be ambitious to know more about any and all articles and materials we offer for sale than our average customer does, and freely give him the benefit of our knowledge for his good, and our good will take care of itself. Establish your prices, terms and manner of treatment upon a reasonable basis. Be content with your calling, or get out of it—yes, more, take both an interest and pleasure in your business. Thus equipped you may be excused for having much pardonable pride in your business and yourself—in fact, you may safely swell up and congratulate yourself that you are running your business upon a high, intelligent plane, from which no manner of competition, either foul or fair, can dislodge you—in brief, you are now a "merchant."

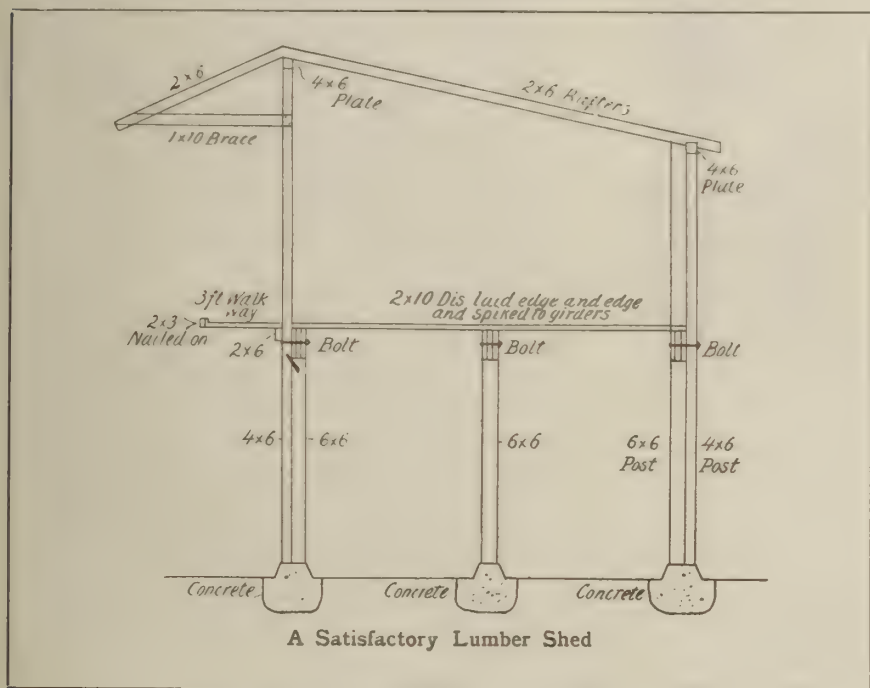

How childish it seems, and is, for a retail dealer to never trim his sails until he either sees or else imagines, the policy some supposed competitor pursues, and then resort to some questionable methods, either to harass, even up with, or overcome his self-established enemy, who if he be a merchant, may receive his first intimation that his would-be assailant was an inhabitant of this earth. What a contrast to a manly, self-defined business policy, which courts investigation, and has only time, usually scant time, to attend to his only business. The dealer in "questionable methods" has but little use for the pleasure and benefits of associating with his fellow dealers in an organized effort to protect common interests, to acquire helpful information and to accomplish general legitimate purposes. His blinded vision sees no good in an organization unless it helps him to accomplish a selfish end or to punish a personal enemy. Patriotism is sometimes wanting from other sources and all business associations are looked upon with more or less distrust, so it behooves us to avoid questionable methods and aims as a losing proposition, anywhere and everywhere they may be found.

General allusions to, and denunciation of evils, ought to be sufficient to cause each thoughtful dealer to reflect upon his methods and make whatever adjustments may be needed, but others might profit more by a more definite, plain English shop talk, so I want to mention a few methods which, depending upon the uses made of them, may become intolerable as dishonest, questionable as suspicious, or useless as unprofitable. Brother, do you or have you been seeking a co-partnership with contractors, carpenters and other workmen, paying them commissions to "leg for you?" Have these partners of yours, who have their skill and

labor for sale, sold to you their influence only, or does the method you employ require them to treat lightly their sense of honor in helping you "to do" your common customer, who buys of them their skill and labor? I hope not. The dealer who resorts to such a method, either must have booty at the end of the conspiracy or else he must acknowledge he is no equal of his competitor as a salesman. He who re-grades his lumber, making two grades of one grade, either puts in his time to keep out of mischief or else his custom will most likely end in deception. He who drives into territory not tributary to his place of business to make a sale lacks dignity and in his over-anxious method is apt to forget and misrepresent near-by fellow dealers, and is most sure, if he makes his sale, to sell to him, a stranger, cheaper than he does his home trade, among whom he numbers his friends. It is not necessary to multiply queer practices. Any and all of them are mischief makers—undignified, and usually more or less dishonest. Let the time consumed in scheming be spent in an intelligent effort to become a respectable merchant, with an established reputation for fair and square dealing upon a reasonable basis. Any other course is folly. You may be cute and play your game for a time, but all you need to do is to persist. You will finally find another equally as cute and who plays his game equally as well. You will both be actuated by selfish and vicious motives. You will both imagine all things fair in war, so you will both stoop to all manner of dishonest practices and methods. It will be a long, severe struggle. Your youth will have been tinged with the silver of age and when you should be recognized as a respectable retired merchant you will be a bankrupt at the bottom of the ladder. Such folly!

Building a Satisfactory Yard Shed

In building a lumber shed there are several things to be taken into consideration, says a correspondent of the "Wood-worker." A yard shed may be constructed quickly and cheaply by digging holes in the ground in

which to set the posts, but after some years the posts will rot off at the surface of the ground. Brick foundations are expensive. Again, it is often desirable to not pile the lumber on the foundation of the shed, but to lay sills for the purpose, entirely independent of the shed itself, so that the weight of the lumber will not rest on the shed foundation and possibly sag down the shed.

The accompanying sketch will give a pretty good idea of the construction of a very satisfactory shed. Of course, the size may be altered to suit the case. In the first place, we dug some holes in the ground down to clay, and about 20 inches square. Then some wooden box forms were nailed together, to set over these holes, so as to bring the concrete up about 8 inches above the ground. Concrete was made up of about one-third Portland cement and two-thirds sand, and the holes and boxes filled to the top. These cement pillars were about 8-foot centres, and after the cement was set we knocked away the wooden forms. The front and rear posts of the shed, 4x6 inches, are carried all the way up to the top plate, and against them we set a 6x6 to carry the weight of the second floor. On top of each 6x6 rests a girder built up of three pieces of 2x12, well spiked together, and to further keep it from possibly wringing apart, a bolt was put through over each post.

For a second floor, instead of the conventional joists and bridging, with floor on top, we laid down 1x10's, surfaced to thickness and well spiked to the girders, three nails in each bearing. This 2x10-inch floor also projects out 3 feet on the front, to form a walkway, and pieces of 2x3 are nailed along the ends to keep them from springing up or down, and

also to act as a guard for one's feet, to brace the foot against when taking up or running down lumber.

The upper floor is entirely free from posts from front to rear, and no obstructions for piling. The concrete pillars will never rot, and in piling on the ground floor, sills can be laid in between the pillars, or, better still, a concrete sill can be laid at small additional cost. This shed is boarded up and down with 1x12-inch box boards and the front left open, but sliding doors or canvas doors could be added if wanted.

A Retail Lumber Yard

By L. S. HEYWOOD

In this paper I shall speak in relation to a yard in a country town. One having a yearly sale of from \$40,000 to \$75,000 and carrying a stock of \$10,000 to \$25,000 or \$30,000. We first must consider before locating a yard: Is there a demand for a yard that deals wholly in lumber and other kinds of building materials? In determining this we must take into consideration several things. First, Is the surrounding country tributary to the proposed location growing in the matter of new buildings? Are the large farms being cut up into smaller tracts, sold to new settlers who must have homes, barns, sheds, fences and the thousand and one things that consume lumber? Are the wealthy class building better houses and stables, and do the people as a whole take on the thrifty, neat appearance of prosperity? If so, the indications point to a demand that only a regular lumber dealer can supply. If, however, the farming district is limited and the small village or town in which you propose to locate is composed of retired farmers, who are living on the interest of money loaned to the surrounding community and who are satisfied to live in the same old comfortable house from year to year and to bring their water from the spring under the hill in a tin water bucket, instead of pumping it into a tank with a gasoline engine or electric motor, and who fear their hair and scold every time an automobile sends their hens and geese cackling over their front fences, then think several times before investing your money in that place.

The location being favorable and prospects good, the next thing is, where does the lumber supply come from? Is there another yard at the place, or does the general store take orders for prospective sheds, barns and houses and order the lumber as soon as the larger part of the car yard as stock? If it is another yard perhaps you can buy it. If not, perhaps enough trade will develop to make two yards pay. Only the condition and size of the surrounding country can decide this. However, the interests of your competitor are the same as yours, and if you are friendly with him you can both get a profit on what you sell. And I say "I find that it pays to be friendly with a competitor in business. Always call on him when you pass, never mind if he is rather cross with you. Perhaps he thinks you cut the price on that bill you sold to Jones yesterday, and perhaps you did. So if that is the case you owe him a cigar and can put in thirty minutes of your time to cheer him up a bit, and when you go away he will think better of you for your friendly call."

If, after all, two yards don't pay you can sell or buy and get rid of one yard. On the other hand, if it is a store handling lumber you are up against it. A bad condition. Ten to one they are using their lumber line to sweeten their general trade, and are not trying to make that part of their business pay any profit. You can't buy them out, for they won't sell to you. You can't meet their price on the little lumber they have on hand, for they are selling at about the cost point. So you have got to keep a better stock than they do, give better service to your customers, hustle for business and wait patiently for an act of Providence to relieve your troubles.

Never ask a customer for pay, or rather don't dun him at your place of business. If he is behind in his payments go and see him at his home or write him. Give him fits, if necessary, but when he comes in your yard greet him with your best smile. But collect! This word should be printed in capital letters and pasted in your hat. I never lost a customer that I forced to pay me. Use judgment; give him a chance to pay and then push him until he does pay. He will think more of you than he will if you allow the old account to stay on your books year after year. And as long as it stays there he is afraid to do business with you and you have lost his trade. Just who to give credit to I cannot say, that part is up to you. You must use your own individual judgment, and upon the correctness of your estimate of human nature depends your success. All men pay some one. If you can win their favor, all well and good. They will pay you. If you take no chances and only sell to gilt edge customers, you won't do much business. Always try to look at the matter as if you were loaning money. Don't leave any uncertainty as to the agreement for payment, and inquire into the purchaser's prospects and how he expects to get the money to pay you. If you find that his expectations will probably be realized you will likely get your pay about as he thinks he can pay. If, however, you find too much doubt regarding his expectations you had better not take the chance.

Give as much personal attention to the selling as possible. Every one who buys wants to get as close to the owner or "boss" of the yard as he can, and the more cranky the purchaser is the more necessary for the boss to get hold of him. Twenty-five per cent. of the purchasers don't know what they want when they come for lumber. They only know

what they are going to build, and much depends upon the salesman in getting them supplied with proper material. I never quote a customer on grades. I show him the lumber and when he has seen the different grades and gets the prices of each, he then can tell what is suitable for his purpose, and the price is usually satisfactory. If, however, as sometimes happens, the customer is a chronic fault-finder, don't lose your temper. Tell him the knots were in the tree when it was cut. That no one is to blame, as trees always grow that way, and, if after all you can say, he still is sour and continues to wish he had "gone to the other yard," why smile and let him go. Pray that he may never come back again, as I have some occasional customers like this, that I always am sorry to see coming into my yard and glad to see going to my friend's yard across the way.

I believe that it pays to deliver lumber. You are able to work off lumber that the customer would refuse to take if he hauls it himself. Now, I don't propose to deliver anything that is not fully up to grade, but in a bill of say 50 pieces 2x6:16, several pieces can go that are rather poor, as they will do to cut up for braces or trimmers, and as you get quite a per cent. of such lumber in every car you have got to get rid of it some how, and you will have quite a time convincing most men who haul their own lumber that they should take anything not strictly first-class.

I don't see how a small yard can keep house without a rip saw, using electric motor where you can and gasoline engine if electricity is not to be had. I have even used one with a horse power, until my temper was spoiled and my language addressed to the horse somewhat shocking. We use the saw for ripping anything we may be out of, also for making batten, cutting bridging, etc., and if you run a carpenter shop with your yard the rip saw will be of much use to your carpenter who works in the shop.

Every small yard must have connection with a jobbing yard to buy sash, doors and many such things, that the small yard does not and is not able to buy direct from the manufacturers, as it would not pay to load up with a carload at one time. I have bought from several yards during the sixteen years I have been running a retail yard. Most of them, after you had phoned your order to them at an expense of 25 cents, would say, "We are just out." I am pleased to say now that when I send to the yard to buy the most of my special material from, I know that I will get it if it is to be found in that city. If they have not got it in stock they go after it and hunt it up. In so doing they serve me well and are enlarging their trade with many other small yards where I am acquainted.—Wood and Iron.

West African Mahogany Camps

The working of a West African mahogany concession is generally attended with great expense and many difficulties. In addition to the expense of operation, a heavy royalty has to be paid to the Government for every tree cut. Much depends upon the physical features of the timber area to be worked and the initial expense of the venture. In some cases swamps have to be bridged over and channels cut to float the logs to some waterway, and some areas are located at considerable distances from a shipping port. Native laborers are paid from \$4 to \$5 per month and about six cents per day for food. While the cost of labor is small from a money standpoint, as compared with a like cost in logging operations in the United States, the results derived from a system of hand labor alone are much less than are secured from the modern methods employed in this country.

The difficult process of preparing the timber for shipment is also an important factor. After the tree has been felled it is squared and cut into logs (usually two to three in each tree), and then hauled to the shallow streams. From 150 to 200 "boys" (natives) are required for each haul, according to the size of the log and the physical condition of the area worked. If the road be through a hilly country, a greater number of "boys" are necessary, with a corresponding increase in cost and length of time consumed. Special "boys" are hired to work the logs from the small creeks to the deep water, which often entails much pioneer work, even to constructing small canals. After reaching deep water the logs are rafted down the rivers to a shipping point, where they may be loaded on ships, Koko Beach being the port for the Benin district. During the rainy season, which lasts from June to November in the Benin country, a raft may be taken to the shipping port in a week or ten days, while in the dry season it often requires three to four weeks. It is only possible to float the logs from the shallow creeks to the deep water during the short rainy period, and frequently it is necessary to build dams in order to float the logs from point to point in the shallower streams. Very often logs have to be redressed when they arrive at the sea coast, as they damage and weather considerably in being transported from the concessions. Large numbers of natives are employed in rafting these logs from deep water to the shipping points, and they usually erect small huts on the rafts, for shelter during the journey. The cross-cutting of logs is accomplished in the same way as in America, while expert native workmen dress and square the logs by hand.

The mahogany tree grows with a trunk often fifty feet in length and up to twelve or fifteen feet in diameter. The exact period required for its growth is not accurately known, but as a large tree changes little in the ordinary lifetime of a man, it is assumed that the tree does not at-

tain maturity under 200 years. The prices obtained for mahogany vary greatly according to the quality of the wood shipped. In a number of instances nine or ten large logs of high grade mahogany have brought the shippers \$2,000 after all expenses were paid.

More care has been taken of late in the cutting and shipping of West African mahogany, as the merchants have found where the cutting was left in the hands of native contractors, trees of all sizes and quality were cut, and as the expense attached to the preparing and shipping of logs obtained from inferior trees were fully as high as for high grade logs, the net market value of a shipment would be materially lowered.

An Interesting Automobile Spoke Lathe

The accompanying illustration represents one of the excellent productions of the Defiance Machine Works, of Defiance, Ohio, U.S.A. It is their 24-inch patent automobile spoke turning lathe, which is especially designed for rapidly producing automobile spokes. It receives the rough stock, either split or square, after it has been equalized to length, and performs the turning of the barrel, squaring of the head, and throating the spoke complete, performing the three operations at one and the same time, at the rate of about 2,500 spokes in ten hours.

By this process of turning, throating and squaring the spoke at one operation the work is uniform, and the squaring and throating are true with the barrel of the spoke, consequently the tenoning can be performed with the same degree of accuracy, and the spokes always register alike when placed into the hub, which is an exceedingly important feature in good wheel making.

This automatic machine, the company claim, can be handled by an inexpensive operator and absolutely correct work secured. It performs the turning smooth and true, and free from knife marks, so that only a small amount of finishing is necessary on a fine polishing belt. It will produce spokes from the very smallest sizes up to 5-inch diameter and in the different lengths up to 24-inch long. The frame of this machine is a massive casting with cored centre and a broad floor base to stand firm.

Defiance 24" Patent Automobile Spoke Lathe

The cutter heads each contain three cutters, and a sufficient number are used to cover the entire length of the longest spoke turned. All cutters have straight cutting edges excepting those which have curved faces for doing the throating, and turning the lug. They can all be easily removed from the heads, reground and replaced when sharpening is necessary by simply placing a wooden templet, furnished for that purpose, between the centres of the machine, and each cutter accurately set to it. By using so many cutters, regrinding is seldom necessary.

The swinging cutter head for squaring the head of the spoke is automatic in its movement, and, by the adjustment of a single screw, it will make the square of the spoke large or small, parallel or tapering. A shield surrounds the cutters and thoroughly protects the operator.

The spoke blank is placed between the centres in the usual way, and, when the table is moved up to where the turning begins, the blank slowly rotates against the cutters and turns its full length at one time. At the same time, the swinging cutter head goes down and squares the head of the spoke. When the table is moved back to remove the finished spoke, the swinging head is automatically lifted out of the way, and the rotation of the spoke is also automatically arrested.

The counter is furnished as follows: shaft, 2 3/16-inch x 72-inch; two No. 2 ball and socket adjustable drop hangers fitted with improved belt shipping apparatus; one driving pulley, 30-inch x 6-inch; tight and loose pulleys, 14-inch x 6-inch, with the loose pulley fitted with bronze bearings; speed, 600 turns per minute. Three and a half horse power is used to drive the machine, and the floor space occupied is 36-inch x 48-inch.

The Shepard & Morse Lumber Company, of Boston, Mass., report under date of Nov. 22nd as follows: High grade lumber here in white pine seems to be rather stiff and advancing, although there is not a large market for it about Boston. There is undoubtedly quite a shortage of high grade pine. Cedar shingles seem to be very weak and there is not very much encouragement, at present, at any rate.

Spruce timber for the present is scarce and frames have decidedly advanced. Of course, this is just the time of year when many of the winter mills have not started up, so it may not show a very strong market trend, simply because it has advanced. Just now spruce boards seem to be about stationary and are so much affected by North Carolina and southern pine, which are selling far below the price of spruce, that it is not very easy to sell spruce boards in any quantity at the present time. Unless the price of southern pine advances we do not see how either spruce boards or white pine boards of the lower grades can show any material improvement. In fact, it would take a good deal of advance in southern lumber to help these items out very much, as it is now selling so far below both spruce and white pine box.

Burns

A Lumberman from Ottawa Valley writes us as follows:

DEAR SIRs:

The Solid Tooth Saws I purchased from you last spring have been doing first class work ever since. I have never had any trouble with them. The Burns Saws are the best, as they are evenly tempered and will keep an edge longer than any other make of saw used here. Yours truly,

Saws

Timber for Sale

98 ACRES LARGE VIRGIN TIMBER Hemlock and Hardwoods, on C. P. R. near smart mill, land level. Particulars by addressing Box 838, CANADA LUMBERMAN, Toronto.

Small Timber Limit for Sale

FORTY-TWO ACRES VIRGIN FOREST: fifty miles from Toronto; 1 1/2 miles from railroad station; comprising maple, elm, beech, hemlock, basswood, cedar. Apply Box 834, CANADA LUMBERMAN, Toronto.

Partnership Dissolved

THE PARTNERSHIP OF THE FIRM OF Craig & Austin of the village of Kinnmount, Lumbermen, has been dissolved by mutual consent. The business will be carried on as usual by J. AUSTIN & SONS.

Timber for Sale

FOR SALE, 2600 ACRES, HEAVILY TIMBERED with spruce, fir, birch easily lumbered driving stream runs through limit, five miles from railway and shore, situated at St. Godfroi, Township of Hope, County of Bonaventure, P. Que. Price reasonable. Apply, P. NADEAU & SONS, Grand Casapedia, P. Que.

Investment Opportunity

INTEREST IN SECURING GOOD HOLDINGS of timber tributary to Lake Temiskaming is growing. Of course the reason is obvious—transportation facilities are good and the mines and towns of Temiskaming are growing apace, producing a market on the ground. We can show you why you will make money buying timber tributary to Haileybury and manufacturing it there. Write us. CYRIL T. YOUNG, Chairman Publicity Department, Haileybury, Board of Trade.

Timber Lands and Saw Mills for Sale

The UNDERSIGNED Offers:—

Parcel 1. Ste. Anne des Monts property situated on the South Shore of the St. Lawrence River, Gaspé County, Quebec, about 1000 acres of Seignior or Fee Simple lands—at the mouth of the Ste. Anne des Monts upon which is located a well equipped lumber and shingle Mill with ample steam power, electric lighting, with a capacity of 25,000 feet of Lumber and 125,000 to 150,000 pieces of Shingles each ten hours—also Dwellings for workmen, Stable, Store houses, Repair Shops and Mill Pond and storage facilities for logs.

About 300 square miles of licensed timber lands upon which disinterested Explorers make a minimum estimate of over 350 Million feet of saw logs, principally spruce, fir and cedar, and 595,000 cords of Spoolwood, and Pulpwood.

All on drivable streams an average of not over 30 miles to Mill Pond.

And all shanty plant tools and equipment on the property.

Parcel 2. What logs are now in the river estimated 3 Million feet board measure.

Parcel 3. Grande Vallée property situated about sixty miles east of Ste. Anne des Monts on the South Shore of the St. Lawrence River in the County of Gaspé, Quebec.

About 54 square miles of Seignior or Fee Simple lands and 100 square miles of Licensed lands.

A new Mill consisting of a steam feed Circular saws—1 Merston Horizontal resaw—with all subsidiary Machinery and ample steam power and electric lighting.

Capacity 30,000 to 75,000 feet of Lumber each ten hours—A practically new Mill for sawing shingles and railway ties.

With ample steam power and electric lighting to produce 125,000 to 150,000 shingles each ten hours.

All the shanty plants, tools and equipment on the property.

On the timber lands, disinterested Explorers minimum reports are 100 Million feet saw logs, principally spruce, fir and cedar and two hundred and forty five thousand cords Pulp and Spool Wood.

For further particulars, address,

C. A. MILLINER,

Deseronto, Ont.

Redwood's Reproductive Power.

Experience with redwood shows that it will reproduce in 25 years large enough for piling. This is encouraging news to those who have believed that only one crop of redwood was possible. Some of the owners of denuded redwood lands are taking up the question of grow-

ing eucalyptus. Some experiments along this line have shown that the eucalyptus is an ideal tree for reforestation purposes in that climate. Already its planting has become quite a commercial industry, although yet in its incipiency. While the planters of eucalyptus may never realize the handsome financial fortunes outlined in the prospectuses of promotion companies, still the covering of the virgin land, as well as that which has been denuded of its forest covering, will have a very salutary effect upon climatic conditions, at the same time furnishing a supply of timber for wood. The Santa Fe has already undertaken the planting of quite a large tract of eucalyptus for the purpose of growing timber for ties. An effort will be made to introduce the use of redwood paving blocks in street construction. These blocks will be 4x4 and 4x6, and, when laid on a concrete base, it is expected, will give efficient service. Redwood is practically impervious to rot and for this reason, for light traffic, especially in residential sections, should be of considerable value.

Sawmills of Dutch Guiana.

There are five sawmills in Dutch Guiana, South America, the capital of which is Paramibo. These mills are managed by the Dutch, and the trade is limited to small local demands. Only one firm has a timber grant of importance, Messrs. Ter Lang & Company, and this firm ship all of their timber to Europe, squared. The timber is similar to that of British Guiana, with the addition of brown-heart. This timber is similar to greenheart, but of course brown in color. There is only one sawmill owned in French Guiana, the capital of which is Cayenne, and it is operated by Mr. Chebance. The timbers are similar to those of British Guiana. The forest owners or those owning concessions or grants are Mr. Chebance, Mr. Brothier and Mr. Castex.

Find Imperishable Wood

A curious source of wealth vested in wood mines is reported by the French consul at Mongtze, in Upper Tonkin, China. The wood was originally a pine forest which the earth swallowed up. The trees lie in a slanting direction, covered by 24 or 30 feet of sandy soil, and some of them are three feet in diameter. The perfect preservation of the tops indicates that the trees were buried at a comparatively recent period. The timber seems to be imperishable and is especially prized by the Chinese as coffin making material.

Review of Current Trade Conditions

Ontario.

The lumber trade throughout Ontario is at present rather quiet and no increase in activity is looked for before the beginning of the new year. The most active market so far as Ontario is concerned is in the United States. At Buffalo there is a splendid demand for all good grades of white pine. Uppers and selects and 4-4 white pine are selling at an advance of \$2 per thousand, as follows: Uppers, 4-4 to 8-4, \$90; 10-4 to 12-4, \$97; Selects, 4-4 to 8-4, \$80; 10-4 to 12-4, \$92; Pine Com., 4-4, \$58. White pine prices are unchanged but the movement is good, particularly among the upper grades. Some dealers are anticipating a much improved market early in the new year, and, accordingly, middlemen are buying quite a large amount of stock in anticipation of higher prices. 1 x 10 common hemlock stock boards are selling well, but 1 x 12 are a little slow. The building trade in Ontario seems to be picking up, and during the past fortnight inquiries have been very numerous originating from this source. British Columbia cedar shingles have declined 20 cents for the 3X, 4X, and 5X grades.

In the Ottawa valley there is a very marked strength in the demand for the upper grades of white pine, but for box and mill culls the demand has declined during the past fortnight. Pine good sidings, 1x8 and up, are selling in Ottawa at \$43 to \$46, an advance of about \$1 during the last two weeks, and 2x7 and up are selling at \$52 to \$58, which is also \$1 higher. Pine box boards are bringing \$15 to \$19, a drop of about \$1, and mill culls are selling at \$15 to \$18, also a drop of \$1. Pine O. culls are bringing \$10 to \$12, which is a decline of \$1. The weakness in box lumber and mill culls is rather curious in view of the high price of the good grades. The prices of high grade pine are higher now than even during the best period in 1906. The English deal market is also strong as compared with a year ago. The preparations which have been made for the winter's cut of logs in the Ottawa valley show that manufacturers are confident of a good season in 1910. Most of the operators will take out a large cut. Several new mills are reported to be in course of erection, so that the total output of the Ottawa valley next season will probably be materially increased. In western Ontario prices generally are steady. The demand for lumber is very strong and there is an upward tendency to prices. No advance in prices, however, is expected before February.

Eastern Canada

The closing of the manufacturing season at St. John will leave only two mills running, so that the output will be comparatively small. Stocks on the wharves are fairly heavy for long and short lumber and "English" deals are more numerous than at the same time in 1908, being estimated at from five and one-half to six and one-half million feet. Prices are stationary at about \$14.25 to \$14.75 per thousand feet, f.o.b. steamer for specifications containing about 50 per cent. sevens and eights, 35 per cent. nine, and 15 per cent. wides. Spruce lath are extremely firm. The closing of the mills will find about four and one-half to five millions at the local wharves and yards, about three-quarters of which will be dutiable. Inquiries are reported for dutiable lath at figures as high as \$3.25 per thousand, f.o.b. schooner St. John. Cedar shingles are in rather an uncertain condition. No extensive shipments are expected until early in the spring. The demand from New England markets is dull. Prices are ranging from \$2.70 to \$2.80 on dutiable "extras" and \$2.20 to \$2.30 on dutiable clears, f.o.b. schooner St. John. St. John stocks amount to five or five and one-half millions of high grade cedar shingles. Of this quantity about three and one-half millions are "extras" and the balance "clears."

A firmer tone and higher prices are noticeable at Boston in the spruce market as a result partly of the conclusion of the summer season of production. With the opening of the winter mills it is expected, however, that prices will be easier again. Manufacturers, on the other hand, are of the opinion that the better prices are permanent. The general price for frames is about 50 cents higher than it was a fortnight ago. Manufacturers, as a rule, are asking \$24, although some business is being done at \$23.50.

Lath at Boston are higher, at \$4.35 to \$4.50 for 1½-inch spruce, and \$3.75 to \$3.80 for 1½-inch spruce. New Brunswick cedar shingles are a shade easier, selling at \$3.60 to \$3.85 for extras and \$3.10 to \$3.25 for clears. Second clears are bringing \$2.50 to \$2.60.

Great Britain

Latest advices from Liverpool are to the effect that the two or three cargoes of spruce remaining to be sold were offered at £8 5s. With liner service about to commence it was expected that these prices would be obtained. It was expected, however, that a slight concession would be obtained on these prices for liner lots. Everything would depend upon the quantities shipped by liners. Parcels of the usual average of 60 to 65 per cent., 7 and 8-inch, which were sent over on consignment, have sold at 5s. below the cargo price. These, however, were Halifax deals of more or less inferior quality.

Spruce stocks at Liverpool are slightly lower than at this time last year. The demand for Quebec spruce is in a very satisfactory condition. Scantlings are exceptionally scarce at Liverpool, especially 3x6, and at Manchester there is a shortage of 2½x7. At the channel ports 12-inch and up deals are not too plentiful and the same applies to 2½-inch scantlings, especially those 6 inches in width.

The market for Quebec pine and red pine at Liverpool has improved greatly, partly as a result of the demand for yellow pine in the United States. In many cases Quebec red pine is being used where formerly yellow pine only was used. Further advances are expected before the opening of next season. Those who are in close touch with English conditions state that dealers who buy now will get better prices than those who hold out.

The London market is in a very sensitive condition at present. Prices at recent auction sales have been irregular. In some cases deals have shown a declining tendency. Churchill & Sim at their recent auction sale disposed of prime unsorted Oregon at from 1s. 5½d. to 1s. 7d. At Manchester, trade is quite steady and is expected to remain so for a few weeks.

United States

Something of a lull in business activity is reported by many of the Chicago lumbermen. A good business on the whole, however, is being carried on by the wholesale yards, although the country trade is quiet. White pine prices are still firm as the result of a strong and widespread demand. Manufacturers are able to obtain their prices for anything in the upper grades. Box lumber and box shooks are reported to be in better demand at Chicago. No. 3 is even too high in price for general box making, and Nos. 4 and 5 are coming into more general use.

Hemlock piece stuff is also in better demand at Chicago and prices are fairly good. The improvement since the early fall is quite marked. The small price concessions which were made have induced a good demand, and since this occurred prices have been stiffening a bit without any serious effect upon the demand. So soon as yellow pine prices improve it is expected that hemlock prices will show further advance. At

Cleveland-Sarnia Saw Mills Co., Limited

SARNIA, ONTARIO

Buffalo the demand for white pine is fair, especially for the high grades, while the low grades are improving. There is also a noticeable betterment in the box market. The continued fine weather helped hemlock to maintain its position and it is still selling quite well. Prices are good without any tendency to decline. Long lengths are scarce and 2x4's of any length are also hard to find. Fir prices at Chicago are improving slowly and higher quotations are expected. There is a good demand for timbers but tank stock is not much sought after. Spruce at Chicago is steady with a shortage in the supply.

The red cedar market at Chicago is steady. Clears are bringing from \$3.17 to \$3.22 and stars \$2.69. White cedars are a little dull but prices are steady. There is a good trade in lath and prices are firm. At Buffalo, prices for shingle and lath have not changed of late. The incoming supplies are large, but a steady market is looked for during the winter. Cooperaage conditions at Chicago have improved somewhat owing to the demand for provision stuff.

Market Correspondence

Ottawa Valley News—White Pine Continues Strong

Ottawa, Nov. 23.—The buoyant market for upper grades of white pine continues to be the characteristic feature of the Ottawa lumber trade. Box lumber and mill culls are scarcely in so great demand as they were a fortnight ago. Dealers regard the unremitting demand for the better classes of pine as very striking in view of the comparative quietness in lower grades. In fact, the highest priced pine is selling this month in Ottawa far above what it commanded at the best time in 1906, giving it a record position in the lumber trade. The advance on deal contracts for the British market compared with last year is stated by a large buyer to amount to 3 per cent. This is a conservative estimate, some of the manufacturers assert, but the actual figures are not obtainable.

The brisk demand for upper grades of white pine is especially felt in the town of Pembroke. The good stock is practically all sold up and the prices for box lumber and mill culls are firmer even than in Ottawa. A representative of the Pembroke Lumber Company told the "Canada Lumberman" that this season he sold good sidings and strips at a \$10 advance over last year. This company take so optimistic a view of the lumber trade that they are planning to cut 25,000,000 logs the coming winter. When the company's mill closes at the end of November the season's production of lumber will amount to 15,000,000 feet. This is a drop of 2,000,000 from last year owing to the fact that the season was spent with a view to "cleaning up" more than anything else. The mill ran only in daytime and had a splendid supply of logs and other conditions were favorable, else there would have been a far greater drop than the year before.

The Colonial Lumber Company, of Pembroke, stopped operations on Nov. 16th, having cut 20,000,000 feet. This is the same as last year. The company will carry on operations in the woods similar to last winter. A new mill, with a capacity of 10,000,000 feet per season, will be erected this winter near the site of the Colonial Company plant. A. & F. Fraser, relatives of the well known Fraser Company, of Ottawa, are the builders. The Pembroke Lumber Company has supplied the material for this structure. The mill will produce lumber for the market next summer. McFadden & Loyer, owners of considerable limits on the Jocko river, are also building a new mill at Pembroke which will cut about 10 or 15 million feet per year, and will probably start operations next summer.

McLachlin Bros., of Arnprior, ceased operations on Nov. 5th, and Fraser & Company, at Deschenes, closed down on Nov. 12th. Both firms sent away large gangs to the shanties as soon as they were available from the mills. J. R. Booth has stopped night operations and the men thus employed have been sent to the shanties. Navigation closed in the Rideau canal Nov. 20th. The Ottawa lock master reports that the lumber traffic for the season was heavier than in 1908.

Lumbermen are beginning to feel the bad results of the extremely low water of 1908. Logs which were stranded then are blocking the streams, and it is difficult for mill owners to get down supplies. The E. B. Eddy Company's spruce mill has been thrown idle for want of logs and its wood carriers have nothing to do. If an improvement does not come soon the company will be obliged to bring in pulpwood by train, which is a very expensive operation. The Eddy Company's consumption of spruce lumber is on the increase, as indicated by the opening this month of a new distributing centre for paper products at the twin cities of Port Arthur and Fort William. Congestion is on the upper reaches of the rivers, and all the lumbermen are affected more or less. One man's timber is blocking the other. The rapid progress being made on conservation dams on the upper Ottawa is assurance enough to lumbermen that a repetition of this occurrence will not trouble them again.

The resolution introduced in the House of Commons by E. N. Lewis, M. P. for West Huron, on Nov. 19th, relating to pulpwood, has a feature of much interest to J. R. Booth, the lumber and paper manufac-

turer. Mr. Lewis' resolution differs from those which he introduced at two former sessions. These declared absolutely against export of unmanufactured pulpwood. The new one provides that whenever a foreign nation admits free of duty paper manufactured in Canada, then in such cases no export duty shall be charged on pulpwood exported to such foreign country from Canada. Otherwise the duty sufficient to prohibit the export of pulp and pulpwood is called for. Mr. Lewis told the "Canada Lumberman" that his aim was to bring the American paper mills across the border. He wants to keep in Canada the millions of dollars which are spent in the making of paper. If this resolution is well received by Canadian legislators, the Americans will have an opportunity to decide between doing without Canadian spruce or opening the way to the product of Canadian paper mills. J. R. Booth at present sells to the United States the bulk of his large paper mill output, with a capacity of 100 tons per day. At present the duty is less than \$6 per ton, as he is not obliged to pay the extra levy against paper originating on Crown lands. But if the maximum tariff clause in the Payne Bill is levied next April the tax against Canadian paper would be \$14 per ton. This would practically exclude all Mr. Booth's paper from the American market.

New Brunswick News—A Small Winter Output

St. John, N.B., Nov. 28th.—As the manufacturing season at the local mills draws near its end it is possible to make a fairly definite forecast of the winter's business in long and short lumber in the way of shipments from this port, sales and actual manufacture.

The actual output of the mills at this port will be, comparatively speaking, unimportant. There will be not more than two mills running and the weekly output after the closing of navigation in the river will be, compared with that, say of the present week, small and unimportant. The total would be something very like 600,000 feet of long lumber, 500,000 spruce lath and perhaps 200,000 cedar shingles.

The mills are closing with fairly heavy stocks on the wharves, both in long and short lumber. "English" deals are more plentiful than at the same time in 1908. Of this line there are in sight quantities which are variously estimated at from five and one-half to six and one-half millions of superficial feet. An important quantity of these are already in the hands of the dealers. All of it will be shipped in parcels by the winter liners and probably the greater part will have gone forward by the end of January.

Of such quantities as are still in the hands of the manufacturers it might be said that they will bring prices uniform with those which have ruled the local market during the past month on purchases of "English" spruce deals for delivery to the liners during the winter. It is now apparent that those who held their deals in the hope of better prices made no material gains by that proceeding, although indications throughout the season pointed continually to a higher level in values in this line of goods. At present writing an enquirer for "English" deals would be quoted from \$14.25 to \$14.75 per thousand superficial feet, f.o.b. steamer St. John, in a specification containing say, 50 per cent. sevens and eights, 35 per cent. nines, and balance wides.

The short lumber trade continues to provide the chief feature of interest. Especially is this true of spruce lath. Values in this line have been stiffening steadily for some weeks past and have now reached a point where they might well be described as remarkable, considering the fact that this line of goods stands alone so far as any boosting of price is concerned.

While there is considerable talk of a lath famine, and of a high-water mark in lath prices, it is scarcely probable that any phenomenal figures or prices will develop, although there is at the present more indication of a further advance than of any weakening.

After the first week in December the local offerings of spruce lath will be limited to the output of two mills (as described above) and the quantities then in stock at the local wharves and yards. These latter quantities would make a total of from four and one-half to five millions, of which 75 per cent. are dutiable goods.

The local feeling in regard to lath is of a decidedly optimistic nature. It is stated that enquiries have been received by local firms which named prices for dutiable lath as high as \$3.25 per thousand, f.o.b. schooner St. John. This figure would correctly indicate the ideas of local interested parties and an enquirer would, no doubt, be quoted something very similar.

The local market for cedar shingles is somewhat problematical at present writing. There is little business moving and from all indications it is safe to say that there will be few, if any, shipments of importance from this port until early spring, local people having, apparently, little confidence in the markets of the New England States. While the shrinkage in values of cedar shingles is perhaps too much emphasized, there is no doubt that the demand is light and that the volume of shingles offering are being marketed, in some cases, at the cost of a concession in prices. The present local value of cedar shingles ranges from \$2.70 to \$2.80 on dutiable "extras," and \$2.20 to \$2.30 on dutiable "clears," f.o.b. schooner St. John.

Local stocks of the high grades of cedar shingles would total to from five millions to five and one-half millions. Of this quantity three and one-half millions are "extras," the balance "clears."

The Lombard Steam Log Hauler

Canadian Patent No. 108676

When roads are well graded and iced these engines will handle from 7 to 15 heavy logging sleighs with 5,000 ft. to 7,000 ft. of logs to the sled.

Several Engines are now making 50 miles per day and doing the work of anywhere from 12 to 18 four-horse teams.

Engines will run night and day by changing crews. Only three men to the crew, engineer, fireman and pilot.

The Gordon Hollow Blast Grate

**Makes TWO Boilers do
the Work of THREE**

SAMPLE TESTIMONIAL:

I had THREE 300 H.P. boilers in use in my saw mill, burning mostly wet fuel, and WAS NOT ABLE TO RAISE STEAM ENOUGH TO KEEP RUNNING. Since installing your hollow blast grate I have been using only TWO of the boilers, and have STEAM TO SPARE. Theo. Kundtz, Cleveland, Ohio.

The Gordon Hollow Blast Grate not only greatly increases the efficiency of a boiler and burns wet, green or frozen sawdust, slabs, etc., readily, either separately or together, but

**IT MAKES FIRING EASY and is PRACTICALLY
INDESTRUCTIBLE**

Let us ship you an outfit ON APPROVAL. We will give you thirty days in which to test it, and will pay the freight BOTH WAYS if it proves unsatisfactory.

EDGINGS

Ontario

The Irvine Lumber & Fuel Company, of Brampton, Ont., are stated to have assigned.

The Golden Lake Lumber Company, Limited, Eganville, Ont., are making additions to their mill.

Keenan Brothers, Limited, Owen Sound, Ont., are building a sawmill at Miller Lake, Ont., in the Bruce peninsula.

The Globe Furniture Company, Limited, of Walkerville, Ont., have sold their plant and are planning to continue elsewhere.

Ex-Reeve Frank Rankin has completed his new sawmill at Dover Centre, Ont., and has commenced operations. The new mill is one of the most modern of its kind.

R. E. Heggie, assignee, Brampton, Ont., is receiving tenders until Dec. 2nd for the purchase of the planing mill and stock of the Irvine Lumber & Fuel Company, at Brampton.

The Rat Portage Lumber Company, of Rainy River, are putting in a store at Grassy River. A stock of goods to the value of \$7,000 has already been towed around the lake to that place.

The Canadian Lumber Company, Limited, Hamilton, Ont., has been incorporated, capital \$50,000. Incorporators: H. S. Brennen, A. S. Brennen and C. H. Taylor, all of Hamilton, and others.

The sawmill of the Glen Lumber Company, at Rutherglen, Ont., has been burned to the ground, together with a small quantity of timber. The mill was insured for \$5,000, which will about cover the loss. The lumber was fully insured.

Messrs. Grigg Brothers are operating in MacMahon township, Ont., this winter, taking out logs for the Bruce Mines Sawmill Company. They report that men are scarce for the camps, the best class being hard to secure, even at \$35 a month.

The dry kiln and heading mill at the Wallaceburg Cooperage Company's plant, Wallaceburg, Ont., have been destroyed by fire. The adjoining mills were saved through the efforts of the fire department. The heading mill is a complete loss, but will be rebuilt.

The Bruce Mines Sawmills Company, Limited, Bruce Mines, Ont., have just completed a new plant which includes band and gang mills. The company expect to take out about four million feet of spruce from their own limits this winter. They have four small camps in operation at present.

Norman Playfair, of Midland, will not operate any camps during the coming winter. Mr. Playfair recently installed a new Corliss engine of the automatic cut-off type in the place of the sliding valve engine which he formerly had in his mill. He reports that this type of engine gives splendid service.

Mr. S. Dymont, of Mickle, Dymont & Sons, Barrie, Ont., is president of a company which has just been formed in Barrie for the purpose of manufacturing in Canada the gas producer engine known in the United States as the Weber engine. The company have obtained the Canadian rights for the manufacture of this engine.

The Lumber Vulcanizing Corporation of Canada, Limited, Toronto, Ont., with capital of \$1,000,000, has been incorporated to vulcanize, marbleize, creosote and fireproof all kinds of timber, and to do a general foundry and machine business. The incorporators are: F. W. Griffiths, H. M. Sinclair and F. F. Wood, all of Niagara Falls, Ont.

Roger Stewart, jr., of the firm of Robert Stewart Company, of Guelph, Ont., makers of sash doors, has, together with a number of men from the United States, formed a new company to locate at Welland, Ont. A site of five acres has been purchased. Eighty hands will be employed. The Welland factory hopes to supply the Northwest markets.

Railway construction work along the route of the Canadian Northern Ontario Railway to Gowganda Junction has already attracted the attention of several lumber concerns, and it is understood that a prominent company is now busily engaged upon a scheme calling for the erection of a large sawmill at Sellwood to saw the logs now being cut in the woods.

J. R. Eaton & Sons, wholesale dealers in lumber, lath and shingles, etc., at Orillia, Ont., have removed their office from the factory building to an adjoining building. They found it necessary to take this step in order to obtain increased accommodation in the factory. They state that business is extremely brisk, being limited only by the capacity of the company to fill orders.

Chew Brothers, lumber manufacturers, of Midland, Ont., have purchased berths number 3 and 5 in the Dokis Indian reserve from P. Shannon & Company, of Renfrew, who secured these berths in the recent sale by the Government. Mr. E. Letherby recently visited these limits, attending to the establishment of camps for the winter's operations. There are about 100 men in these camps and the logs which they take out this winter will be sawn at the company's mill at Midland. The berths are stated to contain a large quantity of excellent white pine. The company expect to take out 16,000,000 feet of pine. There is also a small percentage of red pine and only a very inconsiderable quantity of spruce.

The Siemon Company, Limited, with a capital of \$1,000,000, which has recently been formed, will take over the business of three lumber manufacturers, and acquire a number of timber limits. The businesses and plants referred to are the Lillierap-Tate Lumber Company, with mills at Lakefield; the Geo. E. Niebergall mills at Wiarton, the Geo. E. Niebergall & Son mill and veneer plant at Parry Sound, a timber limit of 3,538 acres in British Columbia, and a block of \$100,000 preference shares of Siemon Bros., Limited, manufacturers of hardwood flooring, at Wiarton. The new company propose to erect a large factory at Lakefield, Ont., in connection with the Lillierap-Tate Company's sawmill for the purpose of manufacturing hardwood flooring, furniture, etc., for the eastern market. Large tracts of hardwood timber have been secured. J. C. Siemon, of Toronto, is president, and W. R. Tudhope, of Toronto, is vice-president of the new company.

Eastern Provinces

Levi H. Minard, lumber merchant, of Milton, Que., is stated to have assigned.

The News Pulp & Paper Company, Limited, of Montreal, Que., has been incorporated with a capital of \$1,000,000. The incorporators are: G. C. Foster, J. T. Hackett, T. F. Coonan, all of Montreal.

The shingle mill owned by Herbert Blair, located at Dalhousie Junction, N.B., has been totally destroyed by fire. The loss is about \$4,000; insurance, \$2,000. This mill worked all summer sawing shingles for the Chaleur Bay mills.

Mr. Michael Welch, the well known Miramichi lumber operator, when in Fredericton recently predicted a smaller cut of logs on the Miramichi this winter. He will probably confine his own operations mostly to getting out railway ties for the G. T. P.

One of the largest cargoes of lumber ever taken across the Atlantic will be shipped by the Norwegian steamer "Ocland" shortly. The "Ocland," which is one of the cantilever steamers running in the St. Lawrence coal trade, will take over three million feet of deal.

The public school commission of Hull, Que., have refused to renew the exemption of the E. B. Eddy Company, Limitel, from paying school taxes. As a result the school board will be a gainer by about \$11,999 annually. For 20 years back the E. B. Eddy Company has only paid \$1,300 a year school tax.

The Canada Woodenware Company, whose plant at Ossekeag, N.B., was burned in June, 1907, is being reorganized, and sufficient capital is being secured to build an up-to-date plant at South Bay, N.B. George C. Weldon, president of the S. Hayward Company, is president of the company, and William Brown, of Hampton, will be in charge of the business.

Martin Freres & Cie., Montreal, Que., have been incorporated with a capital of \$100,000, to carry on business as manufacturers and dealers in timber, lumber, logs, sashes, blinds, boxes and woodwork generally; to own and operate timber limits, sawmills, sash and door factories and planing mills. Incorporators: T. B. Martin, F. Martin and others, all of Montreal.

The Silsby Lumber Company, at St. George, Beauce, Que., have lost their mills and plant by fire. Only a small amount of lumber was destroyed. The loss is estimated at from \$50,000 to \$60,000, covered by an insurance of \$20,000. The Silsby Company is comprised largely of St. Johnsbury, Vt., capitalists. They purchased limits from B. C. Howard & Company, and erected a modern plant.

Another large deal in Newfoundland lumber has been closed by American capitalists. Canadians are also interested. The National Vulcanization Corporation, of the United States, and the Lumber Securities Corporation, are associated with the purchasing interests, and pulp and saw mills and vulcanizing plants will be put into operation as soon as possible. Some of the principals of these companies were in Toronto recently to consider the establishing of Canadian plants controlled by a Canadian company, which is now in process of formation. The Newfoundland operations would have in view only the market of the Atlantic seaboard. Other plants may be erected in Ontario and British Columbia. The Newfoundland undertaking is capitalized at \$5,000,000, and the Canadian company, with head offices in Toronto, at \$1,000,000.

Western Canada

Partridge & Gilroy, lumber merchants, Govan, Sask., have sold their stock to the Beaver Lumber Company, Limited.

The Thomas Nelson Lumber Company, of Killarney, Man., have given notice of application to change their name to the Piper Lumber Company.

Duncan McGregor and Francis Williamson, of Strathelair, Man., recently purchased a lumber interest west of Foam Lake, Sask., paying \$10,000 for it.

The Royal City Shingle Mills, New Westminster, B.C., have been temporarily closed down while the machinery is receiving its annual overhauling. New boilers and smokestacks are being installed.

The Matthews & Smith Lumber Company, of Twin Island, Lake Winnipegosis, have moved their plant to Oak Point. Operations will commence next spring at the opening of navigation on the lake.

The B. C. Gazette gives notice of the incorporation of the following companies: Powell River Paper Company, Limited, capital, \$1,000,000; New Columbia River Lumber Company, Limited, capital \$5,000,000; the Crown Shingle Mill Company, Limited, capital \$25,000.

The Canadian Northern Railway have opened a new townsite at Kindersley, 126 miles southwest of Saskatoon, on the new Calgary line. The place is a divisional point and will be the centre of the C.N.R. immigration activity next year. Although the townsite has only been opened two weeks, four lumber yards and three elevators have secured sites.

It is stated that a creosoting plant will be erected on Burrard Inlet at a cost of several hundred thousand dollars. In association with several Vancouver capitalists, Mr. H. R. Rood, head of the Pacific Creosoting Company, of Seattle, will be in charge of the undertaking. The site secured will permit the company's tank steamer to pump creosote direct to tankage. This tankage will have a capacity of half a million gallons.

Upon the reopening of traffic in the North Arm, which is now blocked by the construction of the new bridge, the Westminster shingle mill on Lulu island will commence operations. The mill will have a daily capacity of 150,000 shingles. Six shingle machines are included in the plant. It is the intention of the company to erect a large lumber mill shortly, to which the shingle mill will be an auxiliary. Construction will probably be started in the spring.

The North Pacific Lumber Company, of Barnet, B.C., who were burned out recently, are rebuilding their plant and are expected to use electric drive. They have placed their order with the Vancouver office of the Allis-Chalmers-Bullock, Limited, for one 600 k.w., 3-phase, 60-cycle, 2,200-volt standard engine type alternating current generator, one engine type direct current exciter generator, and a three-panel switchboard for the control of generator, exciter and power circuits.

Several large steamers have been chartered by the Fraser River sawmills, of New Westminster, B.C., to carry heavy cargoes of lumber to Australian and other foreign markets during December, one of which will carry the largest cargo ever taken from the mills. The steamer which will take this exceptional shipment is the "Sandow," which is chartered to take nearly 3,000,000 feet of lumber. She will arrive during the early part of the month, and owing to the great capacity of the big mills it is expected that she will be loaded and leave port before the end of the month. The steamer "Camphill," which has loaded a cargo of nearly 2,000,000 feet of lumber at the mills recently, left for Sidney, Australia.

Ask us about our Long run

Bass

We have 4 cars each 4/4 and 8/4—mill culls out—running from 50% to 60% No. 1 Common and Better.

You can get a good price on this Common and Better

Ash

2 cars each, 4/4, 5/4 6/4 8/4, 10/4, 12/4 and 16/4, also 1 car 5/4 No. 1 and No. 2 white, containing about 20% or more 12" and over wide—good tough stock.

How are you fixed on

Red Oak

We have about 6 cars each 6/4 and 8/4 No. 1 Common and Better and 100 M feet 8/4 No. 2 Common and better—all dry and good lengths and widths.

Not the Price, but the Service of a Tool Determines its Value

Especially is this true about Cutter Heads. They are little things compared with the size of a machine on which they are used, *but are a very important part thereof*, if your mill is to be a paying one.

The Shimer Cutter Heads are built for hard service. They are made honest and true from start to finish. The billets of steel are forged under a powerful steam hammer refining the grain which is very dense and capable of standing the hardest strains. They are then bored out and turned into shape. This process gives the purchaser a

Cutter Head which will stand up to the work on the hardest of woods and fast feeds. Even if the belts to the Cutter Heads break while the lumber is being fed into the machine (which sometimes happens) the extra strength of the steel forged head prevents the bit seats from being forced out of line.

These tools will bear the strictest investigation. They have the "make-ready" built into them to save time, save lumber, save annoyance, and turn out a finished product equal, if not superior, to any on the market.

SEE THAT YOU GET THE GENUINE

Look for the NAME and TRADE MARK "The Shimer Cutter Head" stamped on every Head we turn out. A dealer who would sell you an imitation means to deceive you—send them back and demand the genuine article with our guarantee for your protection.

Operating with Horses is Expensive!

Patented in Canada and U.S.A.

Dunbar Logging Engine.

Dunbar Logging Engines will haul upwards of 150,000 feet of lumber, depending on the condition of the road which only requires to be made as for horses' operations except that they should be nine feet wide.

In every case there is a large saving over the use of horses. The results to be obtained are not based on theory but have been actually obtained and in some cases the saving has been 75%.

Our descriptive circulars and photos will be gladly sent upon request. They will certainly interest every lumberman who recognizes the importance of economical log hauling.

We also manufacture Shingle Machines, Rotarys, Stock Gangs, Planers and all Saw Mill Machinery.

Don't you think it is a good plan for Canadians to help one another? If we want to buy anything in your line, we do not peddle our orders all over the Continent, but find out Canadian Firms that can supply us with the right kind of goods, and we always give them the preference. We make

Fans, Blowers, Heaters, Shaving Exhaust Systems, Dry Kilns, all kinds of Lumber Trucks . . .

in fact everything required for drying and handling lumber and we have filled some of the largest and best contracts in the Dominion of Canada. We should be glad to have an opportunity of figuring on your wants and can assure you prompt attention, reasonable prices and good goods. We shall appreciate your inquiries.

Dominion Heating & Ventilating Co.

HESPELER, ONTARIO

The cheapest way to skid and load logs is by steam power. The

Universal Logger

is a combined two line skidder and loader with separate engine for loading with steel skidding boom and steel swinging loading boom. It is self-propelling, spots its own cars and moves rapidly from point to point, saving time and the usual switching expense.

Ample water tank capacity is located between the trucks, and the frame is constructed to permit empty cars to pass through the machine for loading by means of its own power.

This machine is especially adapted for light steel or wooden rails.

It isn't what you pay for a Disston Saw

(The Saw you See from Sea to Sea)

but the service it gives which counts

DISSTON Saws are in use to-day which were bought ten, twenty, thirty — even forty and fifty years ago.

If you wish to look at it from the matter of price, the number of years the saw lasts makes the price of a DISSTON per year lower than a saw not DISSTON made.

The length of time a saw gives first-class service —“The Test of Time—The Test of Wear”—there you have the real way of finding out a first-class saw.

DISSTON Saws have withstood such tests for almost seventy years, for very good reasons.

DISSTON investigation of methods and processes never ceases. There is a constant effort to make DISSTON Saws even better. This policy has kept them the **Standard** Saws of the world.

DISSTON STEEL, DISSTON TREATMENTS, and DISSTON Inspection to make sure that every product of the DISSTON WORKS is flawless and strictly up to the DISSTON Standard—all these are responsible for the DISSTON Saw.

FREE—There are important details about the making and using of saws found in the DISSTON handbook. This book of some 200 pages will be sent for your name on a postcard.

We Make All Kinds of Machinery and Tools for the Care of Saws

The sectional view of our swage shows our new spring bracket which permits the swage to tip forward during the operation of swaging. In this bracket we have preserved our compact construction features. It is practically as strong as a solid bracket, is impossible to get out of order, and is easily adjusted to give any amount of spring desired, or to be rigid and allow no spring.

This new feature of Hanchett Swages still further increases the efficiency of a swage which without this improvement has for a number of years been quite generally conceded to have the lead over any other swage manufactured. The spring bracket, in conjunction with the action of Hanchett dies, proves unusually effective in bending the tooth forward so that it may be faced perfectly with little grinding.

Sectional View of Hanchett Band Saw Swage.
(Patented January 5, 1909.)

With this spring bracket with its perfect adjustments, added to the unusually wide range of adjustment of Hanchett swages, the filer can swage his saws to a nicety, and adjust his swage to place the points just where he wants them, and get any amount of hook wanted.

These brackets will fit all the old Hanchett Swages, so that our old customers can avail themselves of this improvement by purchasing from us the new spring bracket.

We absolutely guarantee our swages and all swage parts, and any part furnished by us which fails to be perfect in every respect, both in workmanship and material, will be promptly replaced by us without charge.

Let us send you our New 1909 Catalog No. 18. It is the most comprehensive and up-to-date Filing Room Catalog in existence. It will interest you. : : : : :

This Saw Stands Without a Rival

AND IS THE

FASTEST CUTTING SAW IN THE WORLD!

Its Superiority consists in its Excellent Temper. It is made of "Razor Steel," which is the finest ever used in the manufacture of Saws. We have the sole control of this steel. It is tempered by our secret process, which process gives a keener cutting edge and a toughness to the steel which no other process can approach.

Maple Leaf Saw Set

MANUFACTURED BY

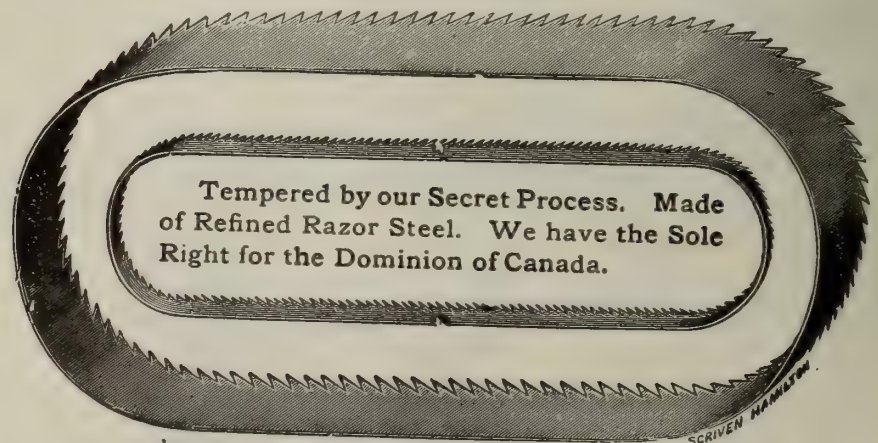

SHURLY & DIETRICH, Galt, Ont.

Directions.—Place the set on the point of tooth, as shown in the accompanying cut, and strike a very light blow with a tack hammer. If you require more set, file the tooth with more bevel.

If you follow directions you cannot make a mistake. Be sure and not strike too hard a blow, and it will set the hardest saw. On receipt of 40 cents we will send one by mail.

We are the only manufacturers in the world who export Saws in large quantities to the United States.

We Manufacture

HIGH GRADE BAND SAWS

Of All Widths and Lengths.

These Saws are made of Refined Razor Steel, and tempered by our Secret Process; for Fine Finish and Temper are not excelled.

Steam Actuated

Single and Double

Our Stationary Niggers are built single and double cylinder, in sizes to fill the requirements of any mill.

The Cylinders are provided with steam ports instead of outside pipes, thereby avoiding leaky joints and loss of steam. They are made 8 in. and 10 in. in diameter, cast especially strong where necessary.

Valve Gearing and Valves of
a newer and stronger design. Steam is admitted through a check valve, which regulates the exhaust to provide a steam cushion to the piston at both ends of the cylinder. This eliminates any danger of the cylinder heads being forced out by the piston. The valves operate easily and quickly by one lever only. Valve travel is short and the same distance in each cylinder.

Guide Rods of forged steel shafting, same diameter as piston rods, are carried with one end attached to the upper cylinder head to make the machine more rigid and self contained.

Cross Heads, extra, heavy, bored to fit piston rods and guide bars, and provided with patent improved oiling arrangement,

Nigger Bars of cast and wrought steel, wider and stronger than the old style bars, fitted with forged steel teeth, hinged to drop back out of the way as the bar recedes.

New Spring Cushion Floor Plate, extra heavy, constructed to take up shock of the bar on the spring cushioned end pieces. All Cylinders and Valves are **thoroughly tested** before shipment.

NOTE: The accompanying cut has been used merely to show the general arrangement of our Stationary Nigger, as the cuts for our new Nigger, described above, are still at the Engravers.

FOR LUMBERMEN

BY LUMBERMEN

WE BELIEVE

YOU WILL READ THIS ADVERTISEMENT.

It has then served its purpose. We want to ask you a question and will confidently leave the answer to you.

DO YOU THINK YOUR INSURANCE RATES TOO HIGH?

We have a plan that will reduce your rates and invite you to correspond with us, we will be glad to explain.

ASK FOR OUR ADDITIONAL LINE PROPOSITION.

Would you not feel safer with from \$1,000 to \$10,000 additional protection? Suppose you have a fire to-night, would your present insurance put you on a sound business basis again? Write us to-day, now that you have read this advertisement before you forget.

PETERBORO SAW MILLS

A Slabbing Machine of Real Merit

Our No. 1 Twin Circular

Slabs both sides of the log at once

It is the very best machine now made for slabbing for a stock gang or a machine such as our "Kendall" Patent Circular Gang.

It can be driven by a steam feed as shown or with a rope feed, and it is also made with a continuous chain feed.

Extremely simple and economical to operate.

It will add greatly to the capacity of a mill where such a machine can be used—and the repair bills are practically nothing at all.

Built in two sizes to slab logs of any length into cants from 24 in. to 6 in. and from 16 in. to 4 in.

We can send you a lot of interesting information if you would like to have it.

If you want any machinery for your mill this winter, don't forget that we build it. You will be interested in our prices.

Snow Plows The Famous Brazel Patent

Known in every Camp from the Atlantic to the Pacific, as the most satisfactory Snow Plow made.

COMBINATION MODEL, LUMBERMAN'S SNOW PLOW, CAN BE USED
EITHER WITH OR WITHOUT RUT CUTTER.

One man to operate. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9' wider than sleigh track or narrower if desired. Height of Mouldboards prevent snow falling back on track. **Brazel Plows** cut 6" wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level road. Cut off dirt and manure from an ice road leaving a clean roadbed. Roll up and push entirely away from the road, 12' of loose snow each time the plough passes over.

Sold on their merits. Strongly built and of first class material. Well finished and fully guaranteed.

Illustrated Catalogue and Prices on application.

The Wilkinson Plough Company

Toronto Limited - Canada

Operating with Horses is Expensive!

Patented in Canada and U.S.A.

Dunbar Logging Engine.

Dunbar Logging Engines will haul upwards of 150,000 feet of lumber, depending on the condition of the road which only requires to be made as for horses' operations except that they should be nine feet wide.

In every case there is a large saving over the use of horses. The results to be obtained are not based on theory but have been actually obtained and in some cases the saving has been 75%.

Our descriptive circulars and photos will be gladly sent upon request. They will certainly interest every lumberman who recognizes the importance of economical log hauling.

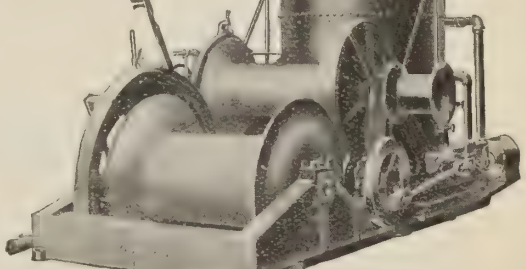

We also manufacture Shingle Machines, Rotarys, Stock Gangs, Planers and all Saw Mill Machinery.

SIMONDS

**Inserted
Point
Saws**

**Made
in
Montreal**

Are you buying a new saw this winter? Then listen to what some other mill men say about the Simonds Saw. We quote from their letters. "As near perfection as one could be made for our mill." "Miles ahead of any other—would not take \$100 in gold for it." "Our favorite saw in the mill." "First class, works fine." "Runs equally well winter or summer." "Your saws have proved the best I ever used." "It's the only saw I can get to stand up in frozen timber."

Some of our friends may be over enthusiastic, but there you have their own words. Isn't it enough to cause you to hesitate and learn more about the Simonds before buying any other make? Really he who uses this saw profits much more by it than do we in selling it. You have more to gain than we.

An attractive little booklet fully describing these saws can be obtained by addressing our nearest office.

THE CANADA LUMBERMAN AND WOODWORKER is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Special care is taken to secure for publication the latest and most trustworthy market quotations throughout the world, so as to afford to the trade at home and abroad information on which it can rely in its operations.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., THE CANADA LUMBERMAN AND WOODWORKER is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Vol. 29

Toronto, December 15, 1909

No. 24

The annual meeting and banquet of the Canadian Lumbermen's Association will be held in Ottawa on Tuesday, February 1st.

A MERRY CHRISTMAS

The arrival of Christmas finds the lumber trade of Canada in an enviable condition and the lumbermen themselves in harmony with the spirit of the season. After weathering the commercial gales of 1907 and 1908, they reached fair weather in the summer of 1909, and are sailing away now before a fair wind with the harbor of profit straight ahead of them. The "Canada Lumberman" wishes a Merry Christmas and a Happy New Year to all its friends, and hopes that 1910 will be an even more prosperous and enjoyable year for them than was the year which has just passed.

Lumber Trade Improving Steadily

"The situation, practically speaking, is stronger than we have had at any time in the past two years." These are the words of one of the most prominent manufacturers of the Georgian Bay district of Ontario who recently discussed the situation with the "Canada Lumberman." During the course of the conversation this manufacturer expressed himself freely upon the situation in general and the following, which is a summary of his views, will probably be accepted as a conservative outline of business conditions in Ontario to-day.

We are now entering the usual quiet period before the holiday season after having had a very good fall trade. White pine in particular has sold very well. The prices and demand for Norway and spruce have advanced appreciably over what they were last summer. When the fall stocktaking is over there should be a manifest scarcity in certain grades of white pine, everything, for instance, in the way of dressing

and better. Travellers report that while trade is quiet in the country there is a general expectation of good business during the coming season and that most of the dealers are feeling very complacent regarding the prospects. Hemlock occupies a better position, but the course of the hemlock market is not so clear as that of the other woods. It has not taken on a specific demand nor does it show the same evidence of strength as the other woods. We do find, however, that there is not the amount of good cheap hemlock offered that there was a while ago and that hemlock stocks are rather broken. Some items in hemlock are difficult to secure, 18-foot lengths, for instance, and some of the more desirable of the short lengths. There is no doubt that we will see hemlock stiffen up quite perceptibly between now and the beginning of the sawing season.

The recovery in red pine has been more pronounced than in any other wood. This wood was in the doldrums last spring and summer. It goes into structural work and also finds a large outlet in car building. The increased activities of the car shops in the United States have introduced quite a demand for this wood.

The southern pine market is still very unsatisfactory, but some of the very low prices which existed in the summer are not in effect to-day. Practically speaking, the southern pine situation is the most unsatisfactory that exists to-day in the general lumber situation. Unquestionably, however, it partakes of the improved tone that exists everywhere in the lumber market and is not by any means in the depressed condition which it was in last spring. But the improvement is due to the demand, not to any reduction in the supply.

The box lumber situation is also improved along with that of the other grades of white pine. Box stocks are much smaller than they were a while ago. Prices of all white pine are largely influenced by the conditions existing in the United States. All through the summer the large purchasers of box lumber on the other side refrained from making purchases, but in September they began to buy, and the result has been that stocks of box and No. 2 culls have been very much lowered by the removal of this lumber to the other side. Dealers, of course, want to get in stocks during the fall so as to be prepared for the winter business. The demand for boxes in Ontario has been quite active this fall, and it is probably a fact to-day that desirable blocks of box lumber are more difficult to secure than they have been at any time during the past year, so that there is, and probably will be, good competition to purchase desirable box lumber.

There is no necessity to-day for a psychological treatment of the subject. People are too busily engaged in the very interesting and difficult problems of filling their orders and preparing for next year's stock, to have any resort to lifting themselves up by their boot straps. Conditions are entirely different from any time in the past and the only thing that is not as it should be, is that the small yard man in the country does not quite appreciate the fundamentally improved conditions which exist. He has been harassed by salesmen for the past eighteen months until he has got into the attitude of feeling that the market is his and that he does not have to buy until he wants to. He is a wise man to-day who prepares for his future necessities. This is not by way of prophesying any unusual advance, but simply stating that the business-like view to take of affairs to-day should lead a dealer to secure adequate supplies at the reasonable prices which exist, which in the very nature of things will stiffen as time goes on.

Statistics of U. S. Lumber Output

A recent Government report gives the total valuation of the lumber, lath, and shingle production in the United States for the past year at \$541,545,640. This amount represents a decrease of 23 per cent. under the previous year's output. The number of mills reporting was 31,231, and these manufactured 33,224,369,000 board feet of lumber, valued at \$510,575,822, and 2,986,684,000 lath, valued at \$6,791,328; while the shingle makers turned out 12,106,483,000 shingles, valued at \$24,178,490. The average value of lumber at the point of manufacture was \$15.37 a thousand feet, \$2.27 a thousand for lath, and \$2 a thousand for shingles.

Yellow pine of the south, which has been far in the lead in the lumber production for more than a decade, more than maintained its supremacy last year, contributing slightly more than 33 per cent. of the

total cut from all kinds. Douglas fir of the northwest ranked second, and white pine third. Practically all kinds showed a marked decreased cut, and for the first three kinds of timber there was a falling off of 15, 22, and 20 per cent., respectively. Oak and hemlock maintained their relative ranks, but showed decreases of 25 per cent. each in amount produced, and spruce dropped 18 per cent.

Louisiana was the heaviest producer of yellow pine lumber, supplying nearly one-fifth of the total production. Texas, Mississippi, Arkansas and Alabama followed in the order named. The State of Washington alone supplied more than three-fifths of the Douglas fir cut, while the bulk of the remainder came from Oregon. Minnesota produced about a third of the white pine, followed by Wisconsin, with about 15 per cent., and New Hampshire, with 10 per cent. An interesting feature of the

report is that two New England States, Maine and Massachusetts, produced more white pine than Michigan, which for many years led the country in producing this valuable timber.

Oak lumber manufacture now centres in Kentucky, West Virginia and Tennessee. Wisconsin comes first in the production of hemlock, taking the position held by Pennsylvania for so many years.

Washington, Louisiana, Mississippi, Arkansas, and Wisconsin, in the order named, constitute the big five in producing the country's lumber supply whose valuation for last year runs far above the half billion dollar mark. Texas, Michigan, Oregon, Minnesota, and Pennsylvania came after the first five States, and others followed in decreasing amounts down to Utah, the lowest on the list, with Nevada and North Dakota, having little timbered area, not rated at all.

Tariff War Bugbear Settled by President Taft

Not since the inauguration of the tariff campaign in the United States over a year ago has so reassuring a public utterance been made by any politician as that contained in President Taft's message to Congress, in which he sets at rest much of the doubt regarding the tariff situation. The framers of the United States Tariff Act of August 5th, 1909, succeeded in couching it in such language that ever since its passage grave doubt has existed whether the last state of the country would not be worse than the first. The press found a fruitful source of profit in the conflicting views of prominent men as to the possibility of the maximum tariff being placed in force against foreign countries, particularly against Canada. From the wording of the Act, it seemed as though those who prophesied a maximum tariff had a strong case, and serious fears arose among business men regarding the results if Canada reciprocated by protecting her raw materials against foreign exploitation. As the maximum tariff could not be put into effect until March 31st, 1910, the issue would have been left in doubt during the long interval. President Taft has been feeling the pulse of the country ever since his election and has come to the conclusion that the course of wisdom is to allay all doubt on this point as soon as possible. He did so in the first message to Congress, which was presented on December 7th.

Regarding the application of the maximum and minimum clauses in the Tariff Act, which has been causing some anxiety to Canada, the President made this statement:

"Two features of the new Tariff Act call for special reference. By virtue of the clause known as the 'maximum and minimum' clause, it is the duty of the Executive to consider the laws and practices of other countries with reference to the importation into those countries of the

products and merchandise of the United States, and if the Executive finds such laws and practices not to be unduly discriminatory against the United States, the minimum duties provided in the bill are to go into force. Unless the President makes such a finding, then the maximum duties provided in the bill, that is, an increase of 25 per cent. ad valorem over the minimum duties, are to be in force. Fear has been expressed that this power conferred and duty imposed on the Executive is likely to lead to a tariff war. I beg to express the hope and belief that no such result need be anticipated.

"The discretion granted to the Executive by the terms 'unduly discriminator' is wide. In order that the maximum duty shall be charged against the imports from a country, it is necessary that he shall find on the part of that country not only discriminations in its laws or the practice under them against the trade of the United States, but that the discriminations found shall be undue; that is, without good and fair reason. I conceive that this power was reposed in the President with the hope that the maximum duties might never be applied in any case, but that the power to apply them would enable the President and the State Department through friendly negotiations to secure the elimination from the laws and the practice under them of any foreign country of that which is unduly discriminatory. No one is seeking a tariff war or a condition in which the spirit of retaliation shall be aroused."

This assurance should set at rest much of the talk about tariff war which has prevailed of late. In the face of such a declaration of peaceful intentions, combined with an almost similar public utterance by Sir Wilfrid Laurier in the House of Commons, none but confirmed belligerents are justified in continuing to talk of fight.

Proposed Insurance Bill Unjust to Canadian Industries

The insurance bill which passed the House of Commons last session has been brought up in the Senate this session and will be taken up by that body shortly after re-assembling on January 12th. The objections from a policyholder's point of view, are very serious, and the matter is worthy of the consideration of every lumberman in Canada. The bill permits a policyholder to insure with companies or Lloyds not registering in Canada, providing he gives notice in writing to the superintendent of his having effected the insurance and briefly describes the property, naming the insurer. In addition to this, the policyholder is required to make returns to the Superintendent of Insurance of all transactions of this nature during the year. He must further pay to the Minister a sum equal to 15 per cent. of the total cost, but in any case not to exceed 15 cents per \$100 of insurance. Failure to comply with these conditions renders the policyholder liable to fine and imprisonment.

The "All Canada Fire Insurance Federation," which consists of companies connected with the Canadian Fire Underwriters' Association, seek to incorporate in the law conditions which would practically mean the absolute exclusion of all non-registered companies or underwriters. If the Insurance Act is amended in accordance with the proposals of the "All Canada Fire Insurance Federation" it will remove entirely the competition in rates of premium which policyholders now enjoy. The proposed law confers privileges and exemptions on the fire insurance

companies, many of which are alien companies, which it denies to the Canadian citizen.

It would have a most detrimental effect upon the interests of Canadian business men seeking to insure their properties to the best advantage if the bill, as now before the Senate, should be allowed to become law. The measure is one of the most daring efforts to advance the interests of a favored few to the disadvantage of the many, that has yet come before the Parliament of Canada. Its ostensible aim has a patriotic appearance, but its actual effect is the reverse. Instead of fostering Canadian insurance companies, it will render all the more secure in their present lucrative monopoly those companies now in the field, many of which are of foreign origin, whose profits go to fatten foreign purses.

Aside altogether from the patriotic side of the question, there is a practical business side to it which is sufficient to determine the issue and to persuade the Government to alter the bill. Canada to-day is not a large enough country to support large specializing companies such as the lumber mutual companies which exist in the United States. These companies perform an indispensable service to Canadians who wish to secure the advantages of insurance at the cheapest possible rate consistent with safety. By a long continued campaign in the direction of educating their policyholders, these companies have succeeded in introducing a new era in insurance. They have proved that the great losses of former

days are not only unnecessary, but are wasteful. By a study of the problems of fire prevention they have reduced the annual loss to a wonderful extent and the benefits resulting have come back to policyholders in the form of reduced premiums. In no line of insurance has greater success been accomplished than in this particular direction. Lumber, a few years ago, was one of the most dangerous risks. The cost of lumber insurance was prohibitive. To-day lumber risks are among the safest in the land, and lumber owners have learned to take care of their properties better than almost any other class of business men. It is due to the efforts of the mutual companies that this has come about. Their rates have become so much lower than the rates formerly existing that the general insurance companies have had to reduce their rates in proportion and the lumber business has felt the benefit all around.

If the bill now before the Senate is enacted into law, it will handicap insurers who use the mutual companies and will make it extremely irksome for them to hold this class of policy. The general companies would benefit by this and gather in whatever business was prevented from going to the mutuals. When freed from the competition of the mutual companies there would be a strong temptation for them to increase their rates.

At present Canadian lumbermen use these mutual companies extensively and save many thousands of dollars annually. With a 15 per cent. tax upon premiums the case would be altered. Take, for instance, a company with policies on Canadian property on which the premiums amount to \$15,000 a year, which is by no means rare, the tax upon such a company would amount to \$2,250, enough to make one think more than twice before taking out a policy. Other disabilities are also so irksome that, taken altogether, they constitute a serious drawback to such business.

Is it just that such a drawback should be imposed? The question resolves itself largely into one of the bona fides of the "All Canadian

Fire Insurance Federation" which is promoting the legislation. If this federation is seeking only to foster the interests to the policyholders of Canada it is taking a peculiar manner to do so. Policyholders will be convinced rather that the federation wishes to increase its protection and render its monopoly all the more valuable. If there were specialising companies in Canada similar to those in the United States and offering similarly advantageous rates, the situation would be different. The United States is a large country with many times the population of Canada, and specialising companies, such as the lumber mutuals, can secure enough business to make their operations profitable. In Canada the population is too small at present, or at least has been so until the present, to permit of such companies being established. The day may come soon when this will be no longer the case. But when specialising companies seek to establish themselves in Canada, it will be time enough to consider preventing Canadians from securing the benefits of this class of insurance in foreign companies.

The question arises, why do not the foreign companies secure licenses to operate in Canada and so eliminate all trouble. They do not, for the same reason that Canadians do not seek to organize such companies themselves—because the field so far has not been considered worth cultivating in such an expensive manner. Foreign companies have to pay a deposit of \$100,000 to the Government when they become licensed and are obliged to comply with other troublesome regulations, which deter them from taking out the licenses, as the amount of special business to be obtained is not considered enough to warrant such an outlay. Those of our readers who maintain that they should be permitted to buy their insurance wherever they can obtain it cheapest, would do well to communicate their views to the secretary of the Canadian Lumbermen's Association, 5 and 6 Carleton Chambers, Ottawa, who is gathering all the information available on the subject for presentation to Parliament.

Campaign for Odd Lengths Gaining Headway in the West

The movement in favor of the manufacture of odd lengths of lumber in addition to even lengths, has gained sufficient headway in the Pacific coast States to justify those who have remained aloof from the movement in considering it an established influence in the future conduct of the business of lumbering. There is no gainsaying the fundamental advantage and economy of manufacturing both odd and even lengths. The wonder is that it was not commenced many years ago. Yet there are two sides to the situation, and it may be many years before odd lengths of lumber are to be seen in the retail yards in quantities sufficient to share the general retail trade, with the even lengths. Long established custom is not to be destroyed in a day. Retailers would willingly purchase odd lengths if they could sell them readily, but the consumer has been in the habit of using even lengths and will have to be educated to the odd. The burden of education will fall pretty heavily upon the retailer, who will, first of all, have to persuade his contractor customers that odd lengths can be used with greater economy than even lengths. The education will have to be passed on by the contractor to the architect. The actual owner of a building to be constructed will need little or no education, as the drag on his purse will be all in the direction of greater diversity in the lengths of lumber. Many an owner has looked on with chagrin while street urchins carted away loads of kindling from his building, and has wondered why he should be called upon to foot the bill for all this material. In this interest of the consumer there might be found a hopeful factor in favor of the new movement, were it not that there is no co-operation among consumers, and they will have to be educated individually, a task which may occupy many years.

Practically all of the large manufacturers of lumber in the States of Oregon and Washington have now entered into an agreement to manufacture odd, as well as even lengths in flooring, finish, and similar planing mill products. Heretofore, it has been customary to manufacture these products in even lengths only. Now, it is proposed to trim the manufactured lumber to lengths of odd numbers as well as even numbers of feet. Under the old system, a considerable portion of the lumber which came to the shaping machine was wasted, and this action has been taken in order to save the waste. In a recent bulletin issued by the United States Forest Service, the subject is discussed in a practical

fashion. Considerable opposition, the bulletin says, has arisen to this innovation among retailers and consumers. The retailer contends that it is impossible for him to dispose of odd length material because of the common practice in the construction of wooden buildings, claiming that the initial saving of the manufacturer is transferred to the consumer. This is denied, however, because of the proportionately small amount of odd length material which will occur under the new system, and because of the latter day practice of laying sub-floors of rough lumber and sheathing on the sides of the house before putting the finishing material in place.

The Portland, Ore., office of the service has recently made an investigation of the actual amount of unnecessary waste incident to the manufacture of even lengths only, and these figures show that under the old system the refuse burner consumed about two per cent. of the total amount of the important forms of planing mill products which are manufactured from Douglas fir and other important forest species, in the States of Oregon and Washington. When it is considered that about 750,000,000 feet of planing mill products are manufactured annually in the two States mentioned above, this two per cent. assumes important proportions. Fifteen million board feet of high priced lumber, it is claimed, can be saved annually in Oregon and Washington by the manufacture of planing mill products into lengths of odd feet as well as even. It would require the yearly growth of timber on approximately 30,000 acres of average timber land to produce the amount of lumber which this annual waste represents.

The energetic manner in which this question has been taken up by the manufacturers of the Pacific coast States leads to a conviction that the movement will surely spread to the east and into Canada. Canadian lumber manufacturers are not, as yet, in the serious condition of those in the United States, through depletion of the forests, but scarcity of timber resources is already an important factor in Canada and the odd lengths movement would probably be received by manufacturers here with approval. The Canadian Lumberman's Association is the logical body to discuss the question, and although it is a young institution with a great deal of organization work still to undertake, the Association could take the subject up probably at its annual meeting, which is to be held on Feb. 1.

Wild Bill of the Restigouche

BY WARD FISHER

AT a turn in the river, where it entered a narrow channel cut by the freshets, the old settlers had built a dam to harness the waters for the operation of a small saw and grist mill. As the market price of lumber increased, capitalists took up the vast tracts of Government timber limits and built a large mill. About the site of the dam, company houses had been erected for the workmen, and a large cookhouse, with its two upper floors arranged with long rows of narrow beds for the accommodation of themill-gang, river-drivers, lumber-jacks, pilers, teamsters, and the odds and ends of help of a great lumber company.

By a natural local vernacular, the "natives" gave the settlement the name of Damsite, and Damsite it continued to be for years.

The men were a motley crowd, rough, brawny men from the country roundabout; small, wiry Frenchmen, demons of the "peavies"; heavy-bearded Germans, the "steadies" of river-driving. And then there were the "natives" who made up the mill-gang. Quick-witted and nimble-handed, they turned out 100,000 feet a day to a shift.

At first sight, every man seemed like his neighbor. And his neighbor was a tough customer. The song, the curse, the roar, the laugh, the bang and rush, made all seem alike. Acquaintance showed a clearly-defined difference. The mill-gang were the aristocrats of the camp, and took readily to store clothes. Hard drinking and fighting was banned, as it would endanger the perfect adjustment of men and machinery. The mill-men chummed about the company store. For amusement they took to quoits and penny-pitching.

The others, freed from the steady-ing effect of machine routine, were known as "The Devil's Own." The cook-house and the river-bank were their stamping grounds, and many a wild evening was spent in reckless daredevilism.

"The Devil's Own" were a godless lot, and were led in their godlessness by giant Dan McCormack, the crack fighter and drinker of the river, and a little wiry Frenchman, Dominic Leger, whom the river failed a hundred times to kill as he faced it with defiant yell in the mad rush of river-driving.

Big Dan was the river-boss—cool and steady, except when in drink or getting over a bout with the bottle. Then he was a fearsome creature, hurling himself with curses against the platoons of logs, as they jumped, dashed, and jammed down the waters.

Always at his heels was Dominic, like an imp from the pit trailing his master, the point of danger and recklessness, either in fight or work, could always be told by his shout and laugh, which grew to a shriek of insanity as the excitement possessed him.

"Dan and Diminic." They were always together. Named as one by the whole river, they were the pride and fear of both camp and settlement.

Six hundred men left to their own devices, with a free rein to their passions, made a community of hard reputation. Sundays and holidays were times of high carnival.

The settlers round about, on their little clearings, gave them a wide berth. There were grave shakings of the head by the older men as some new-born piece of devilry became known. They remembered the days of the little meeting-house, when prayer and praise ascended to heaven. They talked of the "seasons of refreshing" which accompanied the meetings held by the peripatetic preacher.

The meeting-house was closed. The last service had been held two years before—rather, an attempt had been made to hold service. But like many another before it, the beginning-and-end was deplorable. Something, apparently an accident, oftentimes ludicrous, frequently dangerous, would happen. The wild laughter and cheer of the crowd gave cause for suspicion that the "accident" was carefully planned.

Two years had passed by. Big Dan and Dominic reigned supreme. No more was a "long-coat" seen about the place.

Death came in due course. Deacon Jones held religious services over the dead. Funeral services were always unusually quiet. The dead were respected. None were more grave nor reverent in the presence of death than "The Devil's Own."

At the close of an early summer day the whistle sounded for day's work done. The men came flocking from the mill. The teamsters were coming with their horses from all directions towards the barn, and the crews from the near-by camps came singing down the road.

From out the cook-house came a "long-coat." In one hand he carried a large sheet of wrapping paper, and in the other a hammer. With long strides he crossed the road to the bulletin board on the corner of the company store, and taking some tacks out of his mouth, he fastened the paper to the board.

Big Dan and Dominic turned the bend in the road. Suddenly Dominic shouted: "By tam, a 'long-coat'!" And running to the corner he excitedly watched the tacking of the paper. He was quickly followed by all in sight, and "long-coat" soon was surrounded by a curious and surprised crowd.

The placing of the notice being done, the stranger turned his tall form with a "How do, men?" only to be greeted with uproarious laughter. He seemed astonished and apparently somewhat embarrassed.

The crowd looked from him to the board, and again and again changed the object of their attention. Both were apparently well worth looking at.

The stranger was tall, lean, and angular. It could easily be seen he was taller than Big Dan, who measured six feet, two inches. He was dark, with prominent features, and of most ungainly appearance. His straight hair was crowned by a slouch hat. The coat was evidently not made for him, nor in his day. It was unbuttoned, for the good reason that the buttons were gone. The sleeves were short, and showed the wrist-bands of a rough blue shirt. The waistcoat was of the old-fashioned, open-front style, and

around the neck was a white collar and a black string tie. The trousers were black and a good match for the coat. The suit looked as if it had come from the wardrobe of a superannuated minister.

The notice, roughly drawn in black ink with a small brush, read:

Preaching Notice

PUBLIC PREACHING SERVICE

Conducted by William Alden, Licentiate, will be held in

The Meeting House

ON SUNDAY — MORNING, AFTERNOON AND EVENING

Come One Damsite Men Specially Invited Come All

The crowd looked for Big Dan, to see how he was taking it. He had Dominic in his arms, and was kissing him in unholy glee. When he saw

Big Dan McCormack.

all eyes were turned on him, he dropped Dominic and strode forward, accosting the stranger:

"Say! Are you the preacher?"

"Yes, my friend," the stranger said, very cordially, in slow and drawling tone, "I am proud to be sent to preach the Gospel in this place."

"What in hell kind of preacher are you? William Alden, Lickennty-ate? What are you givin' us?"

"I am William Alden, licentiate, my friend. That means, I'm only a student for the ministry."

"You don't say so! You are a student, are you. Well, I reckon you'll be full-fledged before you are here long. Who sent you here?"

"Our superintendent. He told me I could come and try it, if I really wanted to. Guess it's supper time," and turning toward the cook-house, he slowly walked away, followed by the crowd.

"Say!" shouted Big Dan, "I want you to know we don't allow any preaching here!"

"Oh! But the preaching will be done in the meeting-house over yonder," was the reply, made very innocently, while the men laughed.

"You'll come, wont you, my friend?" he said, as Big Dan stood glowering at the crowd.

"You bet! I'll be there good and early!"

The crowd made their way to supper, nudging each other, and shouting sarcastically: "You bet! We'll be there, preacher!"

After a hasty wash-up, they piled in noisily around the long supper tables, and proceeded to pour the tea from the granite pitchers, and to reach for food, when the preacher quietly took his seat at one of the ends reserved for strangers and visitors. With his iron knife handle he rapped sharply on the table. All movement was stopped, and in open-eyed wonderment, and with pitchers suspended, and food half-way to mouth, they heard:

"Let us pray. O Lord, thou God of all the earth, bless this food, and cause us to give thee glory for thy bounty. Amen."

The first blessing ever offered at the place was invoked, and amid consternation, amazement and snickering, the meal proceeded, with only two audible exclamations. One was from Dominic, who put down the big tea pitcher with a bang and a "By tam!" The other came from Big Dan, and was a volcanic "Hell!"

After supper the preacher took a tin of bait from beneath the platform at the back of the house, and one of the poles lying on the grass, and going to the bank of the river he gingerly made his way to the clear water at the end of one of the logs. Carefully placing a cracker box on the log he sat down, and, drawing in his lap the long tails of his coat, he cast his line.

A crowd had gathered, for the curious stranger was a strong attraction. Several, with poles and bait, also made their way to points of vantage.

Dominic, watching the awkward figure, slyly moved the log until a space of clear water separated it from the other logs, and with all eyes watching in delightful expectation, suddenly jumped down on it, and with a burl started the log revolving so as to throw the preacher into the water.

The tall figure arose, and wildly clutching in one hand the box, and with the other hand swinging the pole, he sharply brought the log to a contrary burl, and Dominic went into the water. As the Frenchman came up sputtering, the preacher gave his line a cast, and hooked Dominic in the neck of his sweater. With a drawling "You seem to have fallen in, my friend," he pulled till his catch was able to scramble on the logs, where he stood, dripping and crestfallen, and greeted with jeering laughter.

Soon the laughter was turned to questionings.

"How the devil did he do it?"

Dominic was known as one of the best log-rollers on the river. The preacher was taken at a disadvantage, and yet held his place. No movement of his feet had been seen. How did he do it?

The preacher turned to his fishing, and, again carefully pulling his coat-tails about him, was taking his seat on the box, when he was hailed by Big Dan, who had not opened his mouth until moved at the discomfiture of Dominic:

"Say! See who'll go down this time, damn you!"

With several leaps, he sprang over the intervening logs, and came down with great force on the other end of the log upon which the preacher sat, throwing him several feet in the air. But instead of falling with a splash into the water, the preacher came down with his feet fair on the log and still grasping the box and pole.

Then began the most exciting combat ever witnessed in Damsite. Big Dan was a most experienced river-man, and was never known to be beaten in a contest of the kind. Though heavy of body, he was amazingly quick on his feet. The preacher was awkward in every part of his make-up, and seemed utterly inexperienced. Yet, somehow, he kept his balance.

Big Dan began to burl, and, getting the log revolving rapidly, with a powerful twist of his foot, caused it to buck, but the preacher still held his place. Again and again Big Dan tried, but without effect. The ungainly figure of the preacher, with arms swinging frantically, and coat-tails flying, seemed glued to the log.

The crowd on the bank became motionless. Dripping Dominic, with open mouth and eyes popping out of his head, watched for the outcome.

Big Dan settled down to work. With set teeth gripping his moustache, he tried all the tricks of the experienced river-man. Setting the log revolving rapidly, he would suddenly buck, and, with a jump, come down with great force. That anyone could hold his place seemed impossible, and yet there was the preacher, without any apparent effort, holding on.

Faster and faster Big Dan kept at it. The leaping and churning of the log made the water white. The preacher was continually about to be thrown into the water, but he didn't fall. It was plainly seen that Big Dan was losing his temper and working himself into a great rage.

At last, stung by his failure, with an oath he made a leap for the preacher. As quick as the first motion was made, the flying form of the preacher changed. He stiffened up, and with an almost imperceptible movement of his feet he brought the whirling log to a sudden stop. The motion was so unexpected that Big Dan was unable to balance, and fell with a great splash full length into the water.

Turning, with the remark, "'Tain't a good evening for fish, too much splashing," the victor carefully made his way over the logs to the bank, and quietly went to the cook-house, leaving Big Dan and the crowd to follow.

Long and loud was the argument over the downfall of Big Dan and Dominic. Many theories were stoutly held, but none any more satisfactory than Dominic's:

"By tam, he's the devil!"

The next day, Saturday, the preacher visited around the mill in the morning, and in the afternoon called on Deacon Jones for the key of the meeting-house. With the assistance of several of the children he gave the house a cleaning up.

Long before the hour set for service Sunday morning, there was an unusual stir. Notice of the meetings and all kinds of rumors had penetrated to the farthest camp, and Jersey-shirted, lannigan-shod men came

"Say! are you the Preacher?"

from all directions. Joining with those in store clothes, and with the more venturesome women, they made their way to the meeting-house.

The house was soon filled, leaving about two hundred outside, among them being the more timid ones, who were filled with uneasy expectations as they remembered past experiences. This, with the exaggerated accounts of the preacher, and the singular events which marked his unheralded arrival, gave a more than worshipful interest to the whole gathering.

The preacher's arrival was greeted with great quietness. Going to the door, and looking over the crowded house, and the numbers unable to gain admittance, he made his way to the desk and announced:

"The service will be held outdoors. Leave the house and take the side benches across the way."

Quickly the change was made. Across from the house was a clearing surrounded on three sides by a heavy spruce growth, and used for the piling of logs sledged from the woods during the winter. These logs were piled about twelve feet deep, making quite comfortable seats for the accommodation of a large number. On the grass were placed the benches, and in the centre, near the road, by the use of boards placed across a few logs, a platform was hastily made. On this was placed a chair and a small table. On this table the old deacon put a large accordeon and the meeting-house Bible.

Without any announcement, the preacher took the accordeon, and with a swinging motion he played through the first verse, and then in a strong, pure, musical voice sang "Our God Our Help in Ages Past."

"Now, let us all join in singing 'Jesus, Lover of My Soul'." Great stillness had come over the people while the preacher had been singing. Only a few joined with him at first in singing Wesley's grand old hymn. But before the first verse was sung, tier after tier had taken up the song. Many of the men were expert singers in their own uncultivated way, and it was an inspiring volume of song that filled the air of that Sabbath morning.

Seeing the crowd was in the spirit of song, a number of familiar hymns were sung, and then the old story of the Prodigal Son was read, and prayer offered.

While singing another hymn an uneasy restlessness was observed, and many voices were hushed, as the eyes of those seated at places of vantage were turned down the road.

Coming into view, with long strides, was Big Dan, followed at almost a dog-trot by Dominic.

Looking straight ahead, the two made their way to the vacant circle in front of the platform. The preacher seemed not to have noticed the confusion during the singing, nor the appearance of the two men. Quietly taking up the Bible, he said:

"My friends, I will speak to you this morning from the words found in the fifteenth chapter of Luke's Gospel, at the thirteenth verse—'And he took his journey into a far country, and there wasted his substance in riotous living.'"

By this time Big Dan was facing the preacher. With clenched fists, he broke in:

"Say, didn't I tell you we wasn't goin' to have any preachin' here?"

Slowly the book was shut, and, walking to the edge of the platform, looking Big Dan in the face, the preacher said in steady, even voice: "My friend, we are going to have the Word preached this morning, this afternoon, and this evening, and three times every Sunday, and Tuesdays and Thursdays through the week, without fail."

Opening the book, and looking around at the crowd, he continued:

"To again call your attention to the text, my friends—"

"Damn your text! Get to hell out of here!" Big Dan shouted, amazed at the coolness of the preacher, and the apparent contempt with which he was treated.

By this time many in the crowd were shouting. Some, exulting in hope of a free scrimmage, began to crowd down from the seats on the logs, crying, "Down him, Dan!" "Close up the show!" Others, evidently in sympathy with the preacher, among them being many of the "store-clothes" men, cried, "Sit down, Dan!" "Give the preacher a chance!"

Seeing the crowd was getting into confusion, the preacher held up his hand for quietness, and turning to Big Dan, he said:

"Will you allow this service to go on in peace?"

"I won't allow it to go on at all. The quicker you get out of here the better for your health. See!"

"My friend, this service is going to proceed. Be seated, or leave us in peace."

"If there is any service going to be held to-day, it will be a funeral service, and you won't be the preacher," said Big Dan, evidently in good humor. Turning to the crowd, he shouted: "Get out of here. This meeting is adjourned!"

Many rose to their feet, thinking that any further service was impossible, when the preacher in a loud voice cried:

"Keep your seats."

Then turning to Big Dan, he said in dangerously even tones: "This is going to be settled right now. My friend, will you make a bargain with me?"

"What are you drivin' at?"

"If you give me a whipping here and now, I will promise to leave. If I whip you, will you promise to listen to the sermon?"

With a laugh, Big Dan answered, "Sure, preacher, sure!" Then with a curse, "Why, you damn scarecrow, I'll break every bone in your body."

The crowd listened in astonished bewilderment at the proposals of the preacher. With a strong voice he spoke: "Men, I have come here to preach the Gospel, and the Gospel is going to be preached. Keep your seats. Big Dan and I will settle this matter ourselves. It will be on the square. We will keep our bargain!"

The crowd sank back in their seats with flushed cheeks and eyes ablaze with excitement, while Dominic, standing by the side of Big Dan, gazed blankly around, uttering in a helpless sort of way: "By tam, he's the devil!"

Slowly taking off his coat, the preacher laid it carefully on the table, and unbuttoning the wrist-bands of his shirt, he turned with: "Now, Big Dan, are you ready?"

Big Dan watched the preparations unmoved, with only the lifting of his eyes as the preacher took off his coat.

Then they faced each other. With a gasp, the crowd suddenly realized how evenly matched were the two men.

Big Dan seemed much the heavier, and of splendid physical proportions. He showed to great advantage, with his close-fitting Jersey and trousers caught in light "lannigans." As a wrestler, he was without his match. When aroused, he was a terror, and the equal of any three men in the camp.

The preacher was taller by two inches, and of unusual length in the arm. While thinner in the chest, now that his badly fitting coat was removed, he was fully as broad as Big Dan. His awkward build and heavy shoes would be against him.

Big Dan wanted to have the contest over as quickly as possible, as it would not add to his reputation to fight a mere preacher. Going up close, he suddenly lifted his left foot to trip his opponent, who stood awkwardly with hands by his side; and, raising his mighty right hand to strike as the preacher would fall, he made the stroke, only to find that by a sudden movement his own right foot left the ground, and to be met by a resounding slap on the cheek with the open palm of the preacher.

Jumping from the ground, with a roar of rage he leaped at his foe. Quickly side-stepping, the preacher warded off the heavy strokes, and, without any apparent effort, he caught Big Dan's foot in one of his own and again down Dan went, accompanied by a slap first on one cheek and then on the other.

Getting up, considerably sobered, Dan approached more cautiously, and, feinting, he tried by lightning blows to land, but was warded off without doing any damage.

Suddenly changing his tactics, which had been, seemingly, only on the defensive, the preacher straightened up, and, wading in, he played sad havoc all over Big Dan. Breaking down his guard, with open hands he slapped him over and over again until Big Dan, unable to keep his feet, fell to the earth.

By this time Dominic was fearfully excited, and with a screech he jumped for the back of the preacher, only to be met by a sudden turn that lifted him clean over the benches. Rising with a curse, he made for the enemy, with an ugly looking knife in his hands. With a roar Big Dan shouted: "Drop that, you damned mosquito, or I'll step on you!" Dominic dropped to the grass, weeping from sheer rage.

Big Dan, realizing that he was outclassed at boxing, sought by a series of rushes, to close on the preacher.

With cries of "Don't let him clinch!" a number sought to warn the preacher. Never heeding the blows that were rained on him as he tried for a body hold, Big Dan made rush after rush.

All at once the preacher jumped back, and with arms widespread, he openly invited the clinch. Quick as a flash, Big Dan dashed for the unguarded body. The preacher threw himself forward, and before Big Dan could prepare for the unexpected move he was struck with the whole force of the preacher's body, which sent him flying to the earth with his feet in the air.

Slowly rising, and manœuvring till he got his breath, he accepted the open invitation for another body hold. Soon they were gripped in a tight embrace. Now began the greatest and fairest contest any in the crowd had witnessed.

Locked tightly, they swayed, each trying for the advantage. Sometimes almost on the ground, they strained with crackling joints. The crowd, unable to sit still, were standing on the logs and benches, watching intently the battle of the giants.

At times, cheek to cheek, with ever twisting feet, they struggled over the open space. Again, almost back to back, lifting each other clear from the ground, but unable to loose the hold, they exhibited amazing power.

Suddenly with a cry of satisfaction, Big Dan slipped the long arm of the preacher from about his waist, and with a quick turn he brought him face to face. Then forcing his head under his arm, and gripping

him about the small of the back, he held the preacher at the mercy of his most famous trick.

Many in the crowd gave a sigh of pity. Big Dan could not be hindered from giving that terrible throw overhead—a throw which often ended with serious results.

With every eye glued on him, he set his feet, and tightening his hold, he raised the helpless preacher, and with a giant throw he tossed him over his head.

But with a gasp, the crowd saw the preacher as he was raised from the ground, shift his hold to Big Dan's arm pits, and as he went over his head the weight of his body pressed Dan downward. Holding his grip, the preacher's feet touched the ground, and then with a throw of marvellous power and quickness, Big Dan's body rose in the air, and fell heavily some ten feet away, where it lay bruised and stunned.

"By tam, he is the devil," came from the dry lips of Dominic, as the crowd moved pell-mell to the front.

"Keep your seats," the preacher thundered, "the service will be continued." Slowly they sank into their seats, as Big Dan rose, half-dazed, from the ground.

"Remember your bargain! Take a seat," was the command to Big Dan, who, with exhausted body, dropped on the nearest bench.

Then going to the platform the preacher was putting on his coat as a carriage drove up, and the mill-owner, accompanied by a visiting lumber magnate, got out and came toward the centre.

As the preacher turned to face his audience, the visitor, with an exclamation of surprise, made for the platform, and, grasping him by the hand, said: "William, when did you come here?"

With face lighted by the pleasure of the greeting, the preacher returned the grip, and replied: "I got here Friday. We are about to hold service."

"Do the men know you?"

"No, I guess not. But we are getting acquainted."

Facing the congregation the visitor said:

"Men, I am rejoiced to again meet the best man who ever worked on the Restigouche. Let me introduce Wild Bill as the preacher of the day."

"Wild Bill of the Restigouche!" was echoed by the crowd. Agape with astonished interest, they looked one to the other, and with growing admiration and wonder they followed every move of the preacher.

"Wild Bill of the Restigouche" a preacher of the Gospel! They had heard that name many a time. It was the most famous in the recent annals of river history. Tales of his reckless daring and great strength had electrified many a lumber camp. Wild Bill a preacher!

"By tam," said Dominic, slapping Big Dan on the knee. The cloud of chagrin was clean gone from his face. "By gar, Dan, what you tink!"

What Big Dan thought was known to no one but himself, as he sat, impassive, apparently paying no attention to what was going on.—Canadian Magazine.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing us, enclosing stamped envelope and stating number of enquiry:

1499. Birch boards and scantlings—A Manchester firm asks for prices and dimensions of birch boards and scantlings from Canadian exporters.

1500. Mica—A Manchester firm wishes to correspond with Canadian exporters of mica.

1501. Ash logs and squares—A Manchester firm asks for prices and dimensions of ash logs and squares from Canadian exporters.

1519. Wagon wood stock—A London firm is desirous of securing for clients in South Africa, Canadian carriage and wagon wood stock for coach builders (principally hickory and elm hubs, spokes, rims, shafts, etc.)

1537. Timber—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of timber. Quotations to be c.i.f. Delagoa Bay.

1538. Flooring and shelving—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of flooring and shelving. Quotations to be c.i.f. Delagoa Bay.

1539. Doors and windows—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of doors and windows. Quotations to be c.i.f. Delagoa Bay.

1559. Flooring and ceiling boards—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of flooring and ceiling boards. Quotations to be c.i.f. East London.

1560. Doors and windows—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of doors and windows. The doors must have four panels instead of two long ones, and the panels must have play, to allow for the movement produced by a very dry atmosphere. Pins must not be driven into the panels. Quotations to be c.i.f. East London.

1563. Spruce lumber—A large South African firm of general merchants desires to be placed in touch with Canadian shippers of spruce lumber. Quotations to be c.i.f. East London.

1579. Mining timber—A South African firm of furniture dealers desires to be placed in touch with Canadian shippers of mining timber. Quotations to be c.i.f. East London.

1789. Maple blocks—A London firm would like quotations and samples of maple blocks for wood flooring.

1821. Agency abroad—A Liverpool correspondent wishes to get into touch with Canadian exporters of lumber (pine, spruce, birch, hemlock, in logs, deals, planks, etc.), who may require an agent in Great Britain.

1827. Agency abroad—A correspondent at Paris, France, wishes to obtain the agency for that country of Canadian wood-pulp manufacturers.

1844. Machinery—A Queensland firm desires to be put in communication with Canadian manufacturers of saw-milling and wood-working machinery, also machinery for pulp paper making, etc.

1845. Broom handles—A South African firm of wholesale merchants desires to be put in touch with manufacturers and exporters of broom handles, quoting prices f.o.b. at port of shipment.

1846. Wooden boxes—A South Wales firm is open to buy certain classes of wooden boxes, and asks to be placed in touch with Canadian exporters.

1847. Wooden boxes, box shooks, etc.—A Liverpool firm wishes to get into touch with Canadian shippers of wooden boxes, box shooks, etc.

Personal News of Interest to Lumbermen

Mr. Hugh A. Rose, Toronto, representative of the Fraser River Lumber Company, Fraser Mills, B.C., is in British Columbia on a visit to the head office.

B. L. Tucker, of Parrsboro, who has large lumber interests in Nova Scotia; and E. R. Reid, contractor, of St. John, N.B., are on a trip to Ottawa and Winnipeg.

Mr. W. J. Williams, manager of the Woodstock Lumber Company, has returned from a five weeks' trip to the Pacific coast and through the West, in the interests of the company.

Mr. W. J. Pulling, the well known lumberman of Windsor, Ont., bought a tract of pine in southern Carolina last January for \$45,000, and on Dec. 4th resold it to the original holders for \$100,000.

Mr. G. F. Upham, a well known lumberman of Vancouver, has been appointed manager of the mill of the Red Cedar Lumber Company, Vancouver, which has been sold to the Canadian Cedar Lumber Company.

Mr. W. J. McBeth, of the Parry Sound Lumber Company, Toronto, will attend the annual meeting of the Retail Lumbermen's Association of the State of New York, to be held at Rochester on Jan. 16, 17 and 18.

James White, who has occupied the position of Dominion Geographer since 1884, has been appointed secretary of the commission on the conservation of natural resources, recently organized by the Dominion Government.

Mr. James Lawler, secretary of the Canadian Forestry Association, recently made a successful tour in eastern Ontario delivering illustrated lectures on the protection of Canadian forests. He visited Peterborough, Belleville, Kingston, Trenton, Ottawa and a number of other places.

Mr. T. W. Paterson, of Victoria, B.C., has been appointed Lieutenant-Governor of British Columbia to succeed Hon. James Dunsmuir. Mr. Paterson is a well known contractor and has also been considerably interested in lumber. He was a shareholder in the Canadian Pacific Lumber Company until a few years ago, when he sold his interests.

G. D. Jackson, of the Little Current Lumber Company, has returned to Bay City, Mich., from Little Current, Ont. Mr. Jackson and W. H. Sharp, of Bay City, bought the plant of the W. & A. McArthur Company a year ago and have operated the mill steadily. It has manufactured about 30,000,000 feet of lumber this season.

Mr. T. J. McClennan, formerly of the Charlton Sawmill Company, Collingwood, Ont., is severing his connection with the company to join the Hope Lumber Company, of Bay City, Mich., which will have its plant at Thessalon, Ont. Mr. McClennan will be manager of the mill, and has already entered upon his new position. He has had a long experience in the lumber business and is recognized as one of the most practical of sawmill managers.

Hon. F. J. Fulton and Mr. A. S. Goodeve, representing the British Columbia Forestry Commission, visited Toronto recently in order to secure information regarding Ontario's timber regulations and forestry plans. They conferred with Mr. Aubrey White, Deputy Minister of Lands and Forests; Dr. B. E. Fernow, Dean of the Faculty of Forestry in the University of Toronto, and Mr. James Lawler, secretary of the Canadian Forestry Association. They also visited Ottawa on a similar mission, and were joined there by Mr. A. C. Flummerfelt, the third member of the commission. The commissioners also intended to visit Washington, D.C., and confer with Mr. Gifford Pinchot, chief forester of the United States.

Cooperage Markets Unsatisfactory

Light Demand for Stocks—Manufacturers at Loggerheads—Stocks Heavy

The Sutherland-Innes Company, Limited, Chatham, Ont., report upon the condition of the cooperage market as follows:

The demand for cooperage stock at the present time is comparatively light in some lines, the fall rush being over, and as stocktaking of most concerns takes place at the end of the year, consumers are not laying in any more stock than they have to, at the present time.

The demand for flour barrel stock still continues good, and is likely to continue fairly good throughout the winter, as the barrel is again taking its rightful place with the consumer, in a great many places, displacing the sacks.

The apple crop this fall was disappointing, and not half the barrels were used which was anticipated earlier in the season. This was caused by the hot, dry weather, causing the apples to fall to a great extent, and even reducing the size of the apples which matured, to such an extent that more apples went in a barrel, and consequently reduced the number of barrels used.

The general demand for cooperage stock throughout Canada has not been as brisk this fall as usual, partly owing to the poor apple crop, and also owing to a great extent to business not yet having revived to the extent that the newspapers would have us believe. There is no doubt there has been a considerable improvement in the general business, but it has not yet reached the cooperage stock manufacturers.

The stocks at the mills are a little heavier than usual at this season of the year; it would not, however, take very much of a revival of trade to clean everything up, and the manufacturers feel that the stocks on hand will be required for consumption before the new stocks come in.

Prices have not been satisfactory to the manufacturer this year. This has partly been caused by some of the manufacturers getting at loggerheads and cutting prices, and partly by new parties who know nothing of the cooperage business, and who made a failure of their former business, making prices at which stock could not be manufactured, and show a reasonable return to the manufacturer. There is no doubt, however, this will right itself at some time. As soon as these manufacturers drop what money they have to waste, the legitimate manufacturers will get a chance to market their goods at remunerative prices.

This cutting of prices has been very injurious to the cooper, as coopers buy in good faith at one time, but find their competitors very shortly afterwards buying stock much cheaper, and consequently cutting the price of barrels. In addition to this, some of the manufacturers actually compete with the coopers, selling barrels in the same towns in which they sold cooperage stock to the coopers, and at a less price than the coopers could possibly make the barrels and make a living. In fact, the trade has been demoralized to a great extent this year, but it is not likely that the coopers will again be caught by the same people, but will stand by the manufacturers who have protected their interests in the past and refused to sell barrels, except through them.

So far the winter has been an open one, and no timber has been put in at the mills, so that unless there is a change in the weather very shortly, stocks will be very light this winter, and the production for next season will be limited.

some, and, in addition to this, they have the barrel, which is a valuable empty package and can be used for a great many purposes.

On account of the use of spring wheat to a greater extent than ever by the millers, a higher class barrel is now used, and the millers who buy high grade material and kiln dry their staves, find that their packages arrive in good condition without loss of flour or the expense of re-coopering. Unfortunately, all of the millers do not use good elm stock for their barrels, and others do not kiln dry their staves, even when they buy good stock.

Some of the millers who want a cheap package, use gum, which the Minneapolis millers will not use, nor other material, instead of elm.

Commenting on the condition of flour packages arriving in Newfoundland, J. E. Ray, Esq., Canadian Government agent, St. John's, under date of Nov. 30th, says:

Flour barrels have greatly improved during the last year or two. They ought always to have double bilge hoops; if single hoops are used and they break, there is nothing to support the staves in holding the weight of freight necessarily stowed on them. Wire hoops are unsatisfactory; they make the barrels hard to cooper, and if they are exposed to the rain in transit, the staves swell, and as the wire cannot stretch, one or more of the staves are split down the middle and forced inwards by the pressure. Flour shipped from inland points in barrels made of unseasoned wood, arrive sifting badly, the heads do not contract in proportion to the staves, consequently if the hoops are tightened up the staves come together at the bilge, but are held apart at the ends by the heads, causing a large waste of flour."

I interviewed four of the largest millers in Canada recently, to ascertain if they had any complaints of their packages, and while four years ago their loss used to run from \$600 to \$1,000 per year for leaking packages and re-coopering, they assured me that for three years they had no loss or claim on this account. These millers are all using choice elm staves, No. 1 kiln dried heading, and No. 1 coiled elm hoops, and are all kiln drying their staves when they make their barrels.

Another miller with whom we do business, and who is probably the largest miller in Canada, told me they had decided to discard the wire hoops and use the wooden hoops exclusively. They are doing so this year.

In talking the matter over with the manufacturers, they assure me their customers now prefer barrels to sacks, for the reasons above stated. The salt trade throughout the year has been good, and nearly all of the salt manufactured in Canada goes into barrels, only very little of it being put into cartons, and then packed in boxes. The lime trade is also using a considerable quantity of barrels, while the apple trade have almost entirely discarded boxes, as far as Ontario is concerned, and are packing their apples almost entirely in barrels.

After interviewing the millers, the cereal manufacturers, salt manufacturers and others manufacturing foodstuffs, it seems to be the general consensus of opinion that, provided the barrel does not go too high in price, the consumption of barrels will increase, and they will be the standard package for food products for some time to come.

The sugar refiners are divided on this, to some extent. They all acknowledge that there is no better package than the barrel, but some of them contend that it is too expensive a package, while one prominent refiner is doing everything he can to induce his customers to take their sugar in barrels on account of it arriving at destination in such excellent condition.

Yours truly,
J. INNES.

Consumption of Barrels Likely to Increase

Chatham, Ont., Dec. 6th, 1909.

Editor, "Canada Lumberman":—

Dear Sir,—The question has come up as to whether the use of barrels was increasing or decreasing, more especially for foodstuffs.

There is no doubt that at the present time there are more barrels used in Canada than were ever used before, but the question is, has the growth in the use of barrels kept pace with the increase in the production of foodstuffs, and other articles for which barrels are used?

The sugar trade, which formerly used to put almost all of their production in barrels, now put the bulk of their goods into sacks. This was caused principally by the saving which could be effected by the refiners in sacks as against barrels, and not because the sack was a more desirable package. The sack is not a desirable package for sugar, it is unsanitary, and no matter how carefully the transportation companies handle the sugar in sacks, it is bound to be more or less contaminated by adjacent goods, canines and dirty cars. Some of the refiners and a great many of the consumers realize this, and to a considerable extent are going back to the barrel.

The flour and oatmeal millers are using more barrels than they have recently done, in proportion to their output, as the consumers find that their flour when delivered to them in barrels is clean, sweet and whole-

The Norwegian managers of cellulose mills, knowing the cost of pulp, have done their utmost, since the lockout commenced in Swedish cellulose trade, to get an advance, but only with indifferent results. There was a loss on the Swedish production between July 7 and September 21 of no less than 93,000 tons, and the United States demand is considerably stronger. Nothing could better demonstrate the great over-production prior to this Swedish labor war. Mechanical is quiet. Partially misled by one or two sales at unnecessarily low prices, buyers are attempting to force prices down to a new and somewhat reduced level, which sellers resist. Business is, therefore, very hard to negotiate.—Canadian Trade and Commerce Report.

Viceroy Chan Jen Chun, a progressive Chinaman, recently visited at Hong Kong the Taikoo dock and shipbuilding yard, where a modern woodworking plant is operated. In China, he said, there is widespread and general prejudice against the circular saw. There are few in the entire empire, the bulk of timber being cut by manual labor. The viceroy said it is proposed to hold an exposition next year in the province over which he has control and he hopes to be able to see there various types of labor saving devices from America and elsewhere.

Mr. John Kernaghan who recently lost his sawmill at Salmon Arm, B.C., through fire, has purchased a complete sawmill outfit from the E. Long Manufacturing Company, of Orillia, Ont. The machinery has just been shipped.

The Retail Dealer and His Problems

The Value of a Good Foreman—Handling the Contractor

An Enterprising Bridgeburg Dealer

John T. James—Enterprising Lumber Dealer of Bridgeburg, Ont.

Mr. John T. James, of Bridgeburg, Ont., is the type of man who succeeds in whatever he undertakes. Perhaps it is a natural gift that enables him to prosper, but if so, the gift is that of ability to make the most of every circumstance which arises. Mr. James was born and educated in Cheltenham, Gloucestershire, Eng., and came with his parents to Canada in 1871. Like so many of his fellow countrymen, he immediately commenced to prove that Canada was a land of great opportunity for the persevering business man. He made his first venture in the general store business, opening a store at Bridgeburg, Ont., in 1881. In 1900 he built the store which he still occupies. Since 1886 Mr. James has interested himself considerably and with gratifying success in real estate and building. His interests, in addition to those connected with the lumber business, have indeed been widespread. From

1897 to 1900 he owned, published and edited the "Bridgeburg Review." In 1904 he launched into the lumber business by purchasing, in company with Mr. Byron Disher and Mr. E. W. Near, the Crystal Beach planing mill and lumber business at Ridgeway, Ont. A year later he enlarged his lumber interests by taking over the interests of both his partners. He continued the business in conjunction with his store business. He maintains a lumber yard also at Bridgeburg and has been successful as a building contractor.

Mr. James has been active as a public man, having been first reeve of the village after its incorporation in 1895. From 1898 to 1906 he was police magistrate of the village.

From this outline of his career it will be seen that Mr. James is one of those excellent citizens for the production of which the lumber business is noted. He is a factor in his country's growth, a man of wide interests and of successful application to business detail. He is widely known in the trade and respected by all with whom he has dealings.

The Foreman of the Yard

Who can estimate the value of a good yard foreman to his employer? Certainly no one is likely to overestimate it, yet if any divergence from the facts is necessary, overestimation is safer than the reverse. The proprietor of a retail yard ought to be something more than his own foreman, and the real foreman ought to be only a little less than the proprietor. Every proprietor's ideal should be a business which enables him whenever necessary to leave the office entirely and devote his time to outside problems or business matters which turn up. Without a capable foreman this is only possible at a loss or a risk.

A yard proprietor who has made his business a success, recently estimated that he was away from his office and yard 60 per cent. of the actual business time. Taking an average, it is probable that proprietors have to leave their yards in charge of employees for about 25 per cent. of the time. The importance of having a good foreman is therefore clear. The best equipment and stock may not produce a profit under poor management, yet how many apparently one-horse yards have been developed into splendid business concerns by a capable foreman.

The routine duties of a foreman are well understood by everyone. The other duties are the ones which call for qualifications none too common. After learning all about the business, he should learn all he can about business manners. In intercourse with customers, every variety of tact and foresight is called into play. Good judgment, pleasant manners and undoubted honesty are first aid to the salesman. Without them he will be a drag upon business. The foreman must know how to deal with customers and with the rest of the staff. In short, he must be two persons in one, viz., himself and his employer, and the more he can bury himself and his own interests in those of his employer the more will he prosper and promote the business of the yard.

The Retailer and the Contractor

"Co-operation with the Contractor," is the subject of an article by F. W. Bagan, secretary-treasurer of the Vigars-Shear Lumber Company, Limited, which won third honors in a competition recently held by the "American Lumberman." Mr. Bagan's article, which is both brief and businesslike, is as follows:

The aim of every retailer, whether it be in lumber, dry goods or what not, is to sell the highest possible amount of merchandise with the lowest possible margin of loss. And, in the manner in which you handle the contractor and jobber problem, depends whether you succeed in either one or both of these desirable ends.

We find in our business that this class naturally divides itself under three headings: Those of unquestioned reliability, who secure the larger contracts, and who you would as soon sell as the railroads. Those whom you consider good as long as they are making money, but whom you take no chances with, insisting that they clean up their account on each building as the architect's estimates are given. Those of no moral or financial account whatever, but who still manage to secure a job now and then.

These three classes, especially in a manufacturing or rapidly growing centre, are responsible, directly or indirectly, for perhaps 50 to 75 per cent. of your business, and considering this percentage it is indeed a highly important question and very often a ticklish one.

The first thing to know in dealing with these, is to know, and know thoroughly, your position, just where you come off at in case certain things that may happen do happen. That is, to post yourself so fully on the mechanics' lien law of your respective province or state that you may occasionally be able to give your solicitor a pointer on that law. On how far that law gives you protection (which law differs materially in different provinces or states), depends the business you take, the chances you pass up. In this connection it may be well to add that it is necessary that you have some system which automatically brings to your attention expiring lien dates a week or so before they run out, and of each and every account on your books.

Concerning the first class. You sell these more as an ordinary commercial account, generally waiving your lien privileges if they might take a little more than the thirty days' time occasionally. And if you take ordinary precautions with this class, observe their manner of life, associations, etc., so that the few times they ask for favors you shall not get caught. The second class is more difficult, more numerous and bear everlasting watching. You must follow each building in course of erection closely. As the architect's estimates are given you insist on the value you have thus far in the building being paid; if you let it go until the wind-up you may get caught in the peculiarity of the lien law of that province. If an expiring lien time stares you in the face, you do some good, hard thinking before you allow the security to expire. If you do, it is then a question, "Was my judgment in this instance right?" You advance, you retreat, you are firm, you are courteous, you are everything; you want their business, but, not less important, their money. But never for an instant should you lose your patience or appear suspicious, for that might lose you business, sometimes the money, too.

As to the third class: You do not allow their names on your books; any business they bring is in the name of the owner of the property. They understand that—it has been intimated or told them in a nice way. No hard feelings, just a matter of business. They know they would "do" you if they got a chance; so do you. Still, there is no reason why you can not be friendly, as undoubtedly it will pay both of you.

In the general way, you endeavor to give all of them the highest possible value for their dollars. You give them the grades they buy, you give them prompt delivery. Prompt delivery, say, to a contractor with a dozen men working for him, will be appreciated by him. If he can phone for 50 lineal feet of quarter round and feel sure as pop it will be delivered in a hour, he will say, "Them there people's alright" And be sure to get it there, supposing it does cost 25 cents to do it.

Notwithstanding all your efforts and all your resolutions, you do not always say the right thing at the right time. Maybe you say "No" and it should have been "Yes" or maybe you did not say "Yes" quick enough. You lose a little business or you lose a little money, and then you feel like kicking yourself. Still, if you do not make mistakes, you will never learn.

It is understood that the computations now being made by the St. John River Log Driving Corporation as to the cost of operation will not show any reduction in the rate. In fact, an increase is expected, as the size of logs is growing less, the number required to make a thousand is greater, and the cost of operation consequently greater.

Export of Lumber from Montreal

An Increase of Almost Seven Million Feet—Market Quicker

Montreal Office of the "Canada Lumberman."

December 11th, 1909.

The annual statement of shipments of wood goods to the United Kingdom and the Continent, from the port of Montreal for the season 1909, shows an increase of 6,938,792 feet over the preceding year's figures. The past season is generally regarded as satisfactory, for, while the continental markets were dull during the summer months, trade revived rapidly with the approach of fall and was especially brisk in the last month, due to the foreign dealers realizing the necessity for replenishing their stocks before the close of navigation.

The class of lumber now exported from Canada differs from that sent out a few years ago. The higher prices asked for our better grades of lumber have forced the European customer to content himself with the correspondingly lower grades.

Baltic competition is a factor that our Canadian shippers have now to contend with. Lumber is manufactured in Baltic centres with equally as good milling facilities as we possess and shippers from these points have the advantage in the freight rates.

Just what the outlook is for next season's trade is hard to discern at this early date. The present political situation in England will make business slow and difficult and the future is exceedingly hard to gauge.

Amongst Canadians generally there seems to be a feeling that next season will be a good year in the lumber business of the Canadian West and should this prophesy prove correct and the eastern markets be affected, quiet export season may be looked for.

In the appended list it is interesting to note that the leading shippers, Messrs. Watson & Todd, Limited, have increased their shipments this season by an amount approximately equal to the total increase for the port of Montreal, while Mr. E. M. Nicholson has practically trebled his shipments made in 1908. The following is the list of shippers, with the various amounts exported by each.

	Feet b.m.
Watson & Todd	35,542,107
R. Cox & Company	18,804,045
E. H. Lemay	11,442,989
J. Burstall & Company	10,573,598
W. & J. Sharples	9,655,706
E. M. Nicholson	6,594,976
Dobell Beckett & Company	5,157,003
The McArthur Export Company, Limited	3,143,311
Cox, Long & Company	914,432
Graddon & Owens	671,716
Railways, Steamship Lines and small shippers	12,372,966
United Kingdom and Continent, 1909	114,872,849
United Kingdom and Continent, 1908	107,934,057
Increase, U. K. and Continent, 1909	6,938,792
Total United Kingdom and Continent	114,872,849
Total South America	3,074,010
Grand Total 1909	117,946,859

The Montreal lumber market has assumed a quiet even tone, quite in keeping with the season of the year. The situation generally is quiet and dealers are busy invoicing and cleaning up their stocks. November has been an excellent business month on the whole, and collections are receiving better attention than has been the case heretofore.

December is essentially the month in the year when merchants make up their statements, review their past season's trade and do their figuring on the next year's business.

1909 has undoubtedly shown vast improvement over the previous year's figures, and with the extensive building season that is booked for both Canada and the United States, with the coming of spring, there is no reason to doubt that 1910 will be at least equally as good as the present year.

It is generally felt that stocks to be wintered will be light. It is significant that the American buyers are in quite a few instances willing to close contracts for the next season's cuts, but Canadian manufacturers are not yet ready to sell their stocks.

On the market very little spruce is offering. Sales are not numerous either, but what little is handled is sold at better figures than have been obtainable. This would seem to point to a scarcity in the spring. The demand for dressed spruce required for flooring is also very good.

Laths remain stationary in price and are reported fairly scarce.

White pine seems to be in active demand in some quarters. The American market is rallying and advances as high as \$5 have been noted

of late, in the New York prices. The firmer quotations are for the better grades but culls and common stocks are also stronger.

Shingles are very quiet. The American market ranges very low at the present time and a rather remarkable condition exists, in that dealers can do better in the Boston markets than in New York. Montreal l.o.b. prices are \$2.15 to \$2.25 for 2nd clear, and \$1.35 to \$1.50 for extras, 1's.

All classes of hardwoods continue firm with the upper grades most actively in demand. Basswood is perhaps more frequently called for and is steady at the figures quoted.

With the exception of shingles, prices generally are unchanged

Lumber Thefts from Canal Boats

Capt. John Hinerth, of the canal boats "M. V. Buell" and "Edward Annam," was recently arrested at Fort Edward, New York, and arranged before Mr. Justice Richardson on a charge of grand larceny. This case was preferred against Hinerth on the grounds that he had disposed of a quantity of lumber in Whitehall, N.Y. the property of the Charlemagne Lumber Company, of Montreal, while this lumber was in transit on the above mentioned boats, between the company's Canadian mills and New York. The losses of lumber shippers and owners had grown so extensive that it was decided to investigate the shortages, and it developed that for some time past it had been the custom of several boat captains to dispose of a portion of their cargo while en route between canals and the lakes.

No action was taken against Hinerth in this case, with the exception that restitution was demanded of him. In future, however, stringent measures will be adopted to prevent a recurrence of these steals. Lumber dealers in Whitehall and other centres have been warned that canal boat captains have no right to dispose of their cargoes, and that lumber purchased from them is at their own risk and leaves them liable to prosecution.

Miscellaneous News from Montreal

Mr. Mason, of Messrs. Mason, Gordon & Company, has just returned from a trip to Winnipeg. At the latter place Mr. Mason closed a contract for a million and a half feet of hemlock, for 1910 delivery.

The Eagle Lumber Company, 97 St. James Street, has taken over the agency for the sale of red cedar shingles, manufactured by the Jos. Chew Lumber & Shingle Company, Ltd., of Vancouver, B. C.

Mr. Gordon, of Messrs. Mason, Gordon & Company, who returned recently from an extensive trip to southern Mississippi points, states that the lumber trade generally, in the south, is passing through a most prosperous season, due largely to the existing high prices of cotton. While in Savannah, Mr. Gordon noted two steamers loaded with one million feet of yellow pine for delivery at Gaspe, P.Q. This pine is being largely used for railway purposes.

A large boom is being constructed on the Lievre River, by the Eagle Lumber Company, to contain logs for their Rapide de L'Original, P.Q. mill. The boom is approximately one mile in extent and will be pile driven around the entire length. The company are constructing this boom in order that the loss of sinking logs may be avoided. Last season a well known Quebec firm lost 50 per cent. of their logs due to sinking. Balsam logs, on account of their porous nature, show the greatest tendency to disappear in this way.

A Prediction which did not Materialize

Mr. E. A. McCurdy, manager of the Newcastle, N.B., branch of the Royal Bank of Canada, who has been in touch with the shipping ports of Newcastle and Bathurst for 13 years as a banker and business man, in a recent interview spoke optimistically of the financial and commercial status of that part of New Brunswick. Thirty years ago, he said, pessimists were predicting the depletion of the great forests tributary to the Miramichi and the St. John rivers, and the consequent decline of the lumber business of the province. To-day that lucrative industry was as much on its feet as it was a quarter of a century ago. The report from the Miramichi this year would be in the vicinity of 90,000,000 feet, from the St. John, 190,000,000, and from Campbellton, 110,000,000; or a total of almost 400,000,000 feet, which at \$10 per 1,000 gives a value of \$4,000,000. From 3,500 to 4,000 men are employed in the woods in this business, one firm alone having no fewer than 2,000 men on their pay roll.

Speaking of alleged depletion of the New Brunswick forests, Mr. McCurdy said that lumbermen were quite as anxious as the Government that the greatest care possible should be taken in the cutting of the trees; consequently no undue depletion was taking place from year to year in the great forests of northern New Brunswick.

Mr. Aubrey White, Deputy Minister of Lands and Forests, states that from reports received from the rangers the output of logs during the past season has been the greatest yet.

Death Summons Leading Lumbermen

Ex-Mayor Daniel Wilson of Collingwood Suddenly Called—H. H. Strathy Succumbs to Typhoid

Daniel Wilson, ex-mayor of Collingwood, one of the most prominent and highly esteemed lumbermen of the Georgian Bay district, died suddenly in Toronto on Thursday, Dec. 2nd, having been seized with apoplexy. He was staying at the Iroquois hotel, and had been complaining for several days of a headache. On Wednesday night he retired in apparently good health, but about noon he was heard to be breathing heavily in his room and was found to be in a very critical condition. The physician decided to send him to a hospital, but Mr. Wilson expired before he could be taken to the ambulance. The body was removed by relatives to the home in Collingwood.

Mr. Wilson, as head of the firm of Wilson Brothers, of Collingwood, Ont., commenced business in a modest manner and continued so successfully that at the time of his death he had developed the company until it possessed one of the most complete and up-to-date planing mills and woodworking plants in Canada. He was born in Collingwood in 1861 and received a common school education. He began work at the age of 14 in the shingle, heading and stave factory of George Buck & Company. At 17 he went to learn lumber grading at Christie, Kerr & Company's mill, where he remained for three years, working in the mill in summer and in the woods in winter. Then he spent two years with Peck & Son, of Duluth, sorting and piling lumber and working in the

The Late Ex-Mayor Daniel Wilson of Collingwood.

woods, river driving and rafting. For the next three years Mr. Wilson was with Geo. Buck & Company, grading in summer and scaling in winter. Next he spent a year with George Gall, of Toronto, as lumber inspector.

In 1887, towards the end of the year, Mr. Wilson and his brother ventured into business on their own account. They leased a small planing mill in Collingwood and began to manufacture builders' supplies, and to do contracting under the name of Wilson Brothers. Their trade grew rapidly and in 1902 Mr. Wilson's brother retired, to practice architecture. The business prospered from the outset, until the company's product was shipped from coast to coast.

In public life Mr. Wilson was first elected to the town council of Collingwood in 1896, serving for seven consecutive years. He was elected mayor in 1904 by a good majority, and was re-elected for three successive years, occupying the chair during 1904-5-6-7. He then retired voluntarily. He was Liberal candidate for North Simcoe in 1908.

Mr. Wilson was a well known Hoo-Hoo and a prominent member of the Masonic Order and of the Oddfellows, occupying the highest local offices in each of the latter two orders. He was also an active member of the Canadian Manufacturers' Association and one of its executive officers. As a member of the association's special insurance committee he gave valuable assistance in working out its plans.

Henry H. Strathy, K.C., of Barrie, Ont., died after a brief illness from typhoid fever, on Nov. 30th. Mr. Strathy was largely interested in British Columbia timber limits. Mr. Strathy was president of the Benchers of the Provincial Law Society of Upper Canada for several years, and also president of the Simcoe Law Association. He was born in Barrie in 1847, called to the bar in 1871, and created a Q.C. in 1885. For some years Mr. Strathy identified himself with industrial concerns

and helped materially to promote the business welfare of Barrie. At the time of his death he was president of the Royal Victoria Hospital, and of the Children's Aid Society, and an executive officer of the Barrie Bible Society. He is survived by his widow and son, Gerrard B. Strathy, of Toronto. J. R. Strathy and A. G. Strathy, of Toronto, are brothers.

Captain Daniel F. Tapley, the only surviving member of the firm of Tapley Bros., log freighters and tugboat owners on the River St. John, died recently, aged 78 years. He was prominently identified with the lumber business all his life.

Walter I. Reid, lumber merchant and manufacturer of coopers' supplies, while attending to his business duties at the factory at Ayr, Ont., recently suffered a paralytic stroke, dying from the effects. Mr. Reid leaves three sons and two daughters.

Miscellaneous News from New Brunswick

Mr. W. S. Kennedy, of Debec Junction, N.B., expects to operate the sawmill at that place this winter.

The sawmill at Richmond Corner, N.B., owned by McElhinney Bros., will probably remain idle the greater portion of this winter.

Messrs. Flemming & Neal, who were so successful in their lumber business last year at Oak Siding, N.B., will this year move to Scott Siding. They have again secured the services of Messrs. White & Patterson to manufacture their cut.

Mr. Albert Hayden, of Woodstock, N.B., who has a well equipped sawmill, has associated with him Rev. R. G. Fulton, recently of British Columbia, and former pastor of the Woodstock Methodist church. These gentlemen are at present constructing the necessary boarding houses and laying the foundation for a portable sawmill at Dibblee's siding, about four miles below the town. A considerable timber district near there was damaged by fire last spring, and this firm should have a successful season's work.

Billings & Flemming, of Elmwood, N.B., are enlarging their mill considerably to make room for more machinery, consisting of a planer and matcher, a band-saw ordered from the Goldie & McCulloch Company, of Galt, Ont.; also a complete line of stave sawing and barrel heading machinery. They purpose manufacturing barrels for the potato trade in the Cuban market, and expect to ship a considerable quantity of potatoes to Havana during the winter months. This firm also expect to lumber quite extensively on their own timber lands if the season proves favorable.

The Nepisiguit Lumber Company, of Bathurst, N.B., have let the following contracts for their new mill: Boiler, E. Leonard & Sons, London, Ont.; mill equipment, Clark Brothers Company, Belmont, N.Y. Several other contracts have yet to be placed for engines, belting, saws and other miscellaneous equipment. The company are pushing the work on their mill as rapidly as possible. The concrete foundations of the mill, the engine house, the boiler house and the burner are all in and the framework of the mill is completed up to the roof. Work will be continued all winter so as to have the mill in readiness by the 1st of May.

Attention is called to the advertisement in this issue, of the Canadian Logging Tool Company, Limited, of Sault Ste. Marie, Ont., who are bringing before our readers their car door roller, a device that is said to be of great advantage in loading cars. This roller has been on the market only a few years and the manufacturers inform us that wherever it has been used it has given great satisfaction, there being a marked saving in time in loading or unloading cars of lumber. The roller illustrated in the advertisement (on page 18) is for side door of car, but rollers are also furnished for end doors and at a lower price. The roller is adjustable by means of a screw in the end so it will fit any car door. Then the roller part upon which the door is rolled is on a pivot, so that lumber can be rolled in almost any direction. It looks like a device that should be sold readily to firms shipping a dozen or more cars of lumber in a year. One of the important points of merits claimed on behalf of it is that there is no broken lumber.

The Jeffrey Manufacturing Company, Columbus, Ohio, manufacturers of conveying machinery, have issued an attractive general chain catalogue, No. 81, which will be found interesting by all who use or need conveying machinery. The catalogue, which is profusely illustrated with excellent half tone engravings, contains also general price lists and descriptions of the company's elevating, conveying and power transmitting machinery and chains. The great variety of chains represented and their peculiar adaptability for their particular work will at once impress the reader. More complete information can be had from the company, who have already published a wide range of books relating to the application of their methods to special lines of work. We are also in receipt of a useful bulletin, No. 18, from the Jeffrey Manufacturing Company, which describes in the same thorough manner this company's electric and air power coal cutters.

Lumber Matters in the Law Courts

Important Decision in English Court Regarding Breach of Contract—Writ to Restrain Sale

Alleged Breach of Contract—A decision of importance to Canadian manufacturers of lumber has just been given in London, Eng., by Mr. Justice Hamilton, in the Commercial Court of the King's Bench Division, the case being that of Howard Brothers & Company, timber merchants, against the Imperial Timber & Trading Company, Limited. The action was brought by a firm of large timber merchants of London against a Canadian company to recover damages for alleged breach of contract in connection with the shipment of a quantity of Douglas fir from Vancouver. The defendant company denied the alleged breach. The question of the amount of damages was allowed to stand over. Counsel for the plaintiff presented his case as follows: In 1908 the plaintiffs wanted a quantity of Douglas fir and communicated with Tagart Beaton & Company, of Fenchurch street, London, agents in England for the defendants. Defendants entered a contract to deliver 198,000 superficial feet on board ship at Vancouver, B.C., by October 31st, 1908. The demand made on the defendants proved to be beyond their capacity to perform. Plaintiffs alleged that the best offer defendants could then make was one involving a delay of three or four months—namely, to deliver about half the cargo in February, 1909. The plaintiffs finally gave up the contract and were obliged to get the lumber in London. They gave notice in December that they must treat the contract as ended and that they would hold the defendants liable.

Defendants claimed that there was a printed clause in the contract providing that if there was any dispute as to delay it should be the subject matter of an allowance to be decided by arbitration. The contract had been entered into on September 19th, at 65s. per 1,000 superficial feet. Defendants wrote asking for an alteration in the lengths required (33 feet to 40 feet), as they had difficulty in getting logs of the required length. The plaintiffs chartered a vessel to carry the lumber, which sailed on Nov. 10th. Finally, on Dec. 28th, the defendants wrote a letter which plaintiffs accepted as a clear admission of inability to perform the contract. Defendants said that though they had scoured the whole coast they had been unable to get logs of the required length, owing to disputes among the loggers and scarcity of such timber. Plaintiffs held that the clause relied on by the defendants did not apply to shipments on f.o.b. terms.

The defendants held that the plaintiffs were not entitled to repudiate the contract under the circumstances and because they could only get half the quantity in February instead of by October 31st. It might have been an inconvenience to the plaintiffs to get only half in February, but that was no ground for repudiating the whole contract.

The clause in dispute was, from the point of view of the seller, an important one. From that of the buyer it might be inconvenient, but that did not matter if the buyer had really accepted it. He could not send a ship if there was nothing for it. The delay, they claimed, was not so unreasonable as to amount to a repudiation of the whole contract.

His Lordship, in giving his decision, said he believed the clause in question was meant to apply to a c.i.f. contract. He did not think that if it was contemplated to enter into a f.o.b. contract it would have been inserted. But they could not deny that the words could be used as applicable to a f.o.b. transaction, which form the transaction afterwards took. The part referring to immediate payment also referred to freight and insurance. The words to the effect that should the shipment be delayed beyond the time mentioned in the contract, the buyer should not reject the goods, but pay the charges and refer the matter to arbitration, could not be read except as referring to a f.o.b. transaction. He did not think there could be any distinction between shipment on board and alongside, or confined to the delay in bringing the goods alongside as distinguished from a shipment; these were the seller's obligations. The word "delay" in its ordinary meaning did not apply to such a case as the present, where it appeared that the defendants were unable to get the goods according to their own showing until some nine months after the contract was entered into, and seven months after the time fixed for putting on board. After the time for delivery had passed, and when the arrangements for transporting the ship had been made by the buyers, the sellers discovered that the logs mentioned in contract were unprocurable. The buyers were then applying for them, and, being anxious to mitigate their damages and get some goods, they suggested that the goods might be forwarded by instalments, although they should have been forwarded in one shipment. But no definite answer was given to their inquiry until December, when the sellers suggested shipping about one-half in February. When the residue was to be ready they were not prepared to say. Plaintiffs would not accept that, and it would in any case have been a substitution for the original contract. No more was heard in definite terms from the sellers, who, he was satisfied, had no desire to give any definite information, until the 27th May, when a letter arrived at the agents, in which the sellers said: "We have not cancelled the order, and if Messrs. Howard wish us to ship we will do so." When or how they did not say. That was a delay which he thought was un-

reasonable. Furthermore, it appeared that the sellers, having discovered that they could not get wood of the length of 33 feet to 40 feet, had endeavored to persuade the buyers to take some wood they did not want, and, in fact, they were unable to fulfil their contract. On that the buyers accepted what was, in his opinion, a repudiation of the contract, and reserved their claim for compensation, and endeavored to mitigate the damages by obtaining the wood elsewhere. The defendants broke the contract, intimated that they could not perform it, and, in fact, announced repudiation, which was accepted by the buyers. Therefore the buyers were entitled to claim damages, and judgment must be for them for an amount to be ascertained.

Mr. Atkin, for the defendants, said they hoped to be able to arrive at an agreement, but he asked for liberty to apply in any case, when the damages were fixed, for the taxation of costs and damages. His Lordship granted leave to apply.

To prevent sale of timber—The Quebec Bank has issued a writ against the Sovereign Bank to restrain the latter from selling to E. R. C. Clarkson or anyone else the jack pine and spruce wood now on the premises of the Imperial Paper Mills of Canada, Limited, at Sturgeon Falls. Clarkson is receiver and liquidator of the paper mills. The Quebec Bank claims damages, too, for the wood already disposed of.

Railroad Rates in Maine—A decision of interest to lumbermen in New Brunswick has been given, dismissing the petition of the Portage Lake Mill Company, of Bangor, Maine, which complained that the lumber rate charged by the Bangor & Aroostook Railroad Company, from Portage lake to the harbor at Cape Jellison, is unreasonably high. The decision was rendered by the Maine State Board of Railroad Commissioners, who decided that the Bangor & Aroostook Railroad Company has a right to meet the conditions of competition at Van Buren, whether from another railroad or other sources within the State, or whether it comes from the St. John river and railroads on the other side of the river, in Canada. Speaking of the extensions and branches of the Bangor & Aroostook now being built at a cost of at least \$1,500,000, the commissioners said: "These four additional lines will naturally bring about a readjustment of zones and rates in the country along the St. John river. Until these lines are in operation, however, we are unable to find that the present rates are either unreasonable or discriminatory."

Important Feature of a Popular Grate

The Gordon Hollow Blast Grate Company, of Greenville, Mich., who are manufacturers of the Gordon hollow blast grate, draw attention to the distinguishing feature of this grate which has assisted materially in building up its reputation. The tuyere of the Gordon hollow blast grate is seven inches in diameter, and there are from four to seven to the bar, according to the length of the latter. No bolt is used, the tuyere being held in place solely by its own weight, which is ten pounds. In the edge of the tuyere are the blast outlets, which are long and narrow, so as to exclude sawdust and ashes as much as possible. The shoulder on which the tuyere rests also forms a baffle to prevent matter from entering the bar.

As the tuyeres are removable and interchangeable, they afford access to the chamber of the bar, make it easy to remove rust, scale, etc., from the outlets, and permit tuyeres with larger or smaller outlets to be substituted. This last feature is especially important, as the size of the

The Gordon Hollow Blast Grate.

The Tuyere.

outlets is naturally determined by the kind of fuel used, and must, therefore, to give the best results, be changed when the fuel is changed.

The upper surface of the tuyeres is slightly below the general level of the grate, so that the scraper passes over them without touching. They have wings to prevent their canting, and cannot be removed unless lifted vertically. Thus it is impossible for them to become accidentally displaced. The tuyeres flare slightly, and hence discharge the blast at an angle. This, it is claimed, gives an ideal distribution of the air.

There is no forwardly directed blast at or near the bridge wall, as the rear end of the grate is quite likely to be bare, or at best but poorly covered, and the inevitable tendency of such a blast would be to drive the smoke out of the feed doors and to overheat the front. The Gordon Hollow Blast Grate Company state that their grate is the heaviest and most durable blast on the market. There are many outfits in use to-day which have been in constant service since early in the 90's. It has been kept thoroughly up to date by practical men. The company are also the manufacturers of the well known Tower line of edgers and trimmers.

CAMP DEPARTMENT

Increasing Use of Machinery in Logging Operations

The increasing use of machinery in logging operations makes the subject of the care of machinery all important to the lumberman. Mr. R. T. Earle, at the recent Logging Congress in Seattle, delivered an instructive address upon the subject. Mr. Earle's remarks were as follows:

Up-to-date loggers are paying considerable attention to the machinery that is used in bringing their logs from the place where they are cut down to the dump. Yarding donkeys haul to the roads, and road donkeys haul to cars. Owing to the distance that logs have to be hauled to water or mill, transportation, either by donkeys or cars, or both, has forced itself on to the minds of those interested. There are several builders on this coast who are putting on the market first class donkeys, either for yarding or for road work. The maintenance of these machines falls upon the logger. In many instances they are neglected by those handling them for the reason that they are expected to keep them running, and have the logs coming in, and start engines when the signal is given. Often these engines are run up to their limit with bolts working loose in rods or journal box, and later on a bad break happens that could have been prevented if the engineer had been allowed to stop and tighten up the bolts. The first loose bolt causes a rattle or jar that soon loosens other bolts, and the bearing that should run smooth soon becomes a steam hammer or pile driver, not only destroying the bearing itself, but loosening and eventually breaking other parts. The time and expense of tightening the first bolt are nothing when compared to the time and expense in making repairs on a bad break.

Care of Machinery

To keep machinery in good shape we should not rely on the engineer to do all repairs. In most camps it pays to have a good mechanic inspect and repair all machinery at night. The engineer should report all defects that he has found during the day, and the machinist can do this work and as much more as he can find. Every point should be inspected and defects repaired. In this way you will have but few delays during the day, when you have a large gang of men at work. Boilers should be inspected often, gauges tested with a dead weight gauge tester, as the average reference or test gauge is in danger of being damaged in moving from place to place, and you have no way of knowing it until you have an explosion. Safety pops should be locked. Many a good engineer has screwed down his pops to get in a larger load than the other fellow. This is dangerous and expensive. Frictions should be washed out with hot water and dried with steam through a hole in the brake band or flange over the friction.

Engines should be set about $1\frac{1}{2}$ or 2 inches high on gear side so that the oil will not work out of drum into the friction. Keep the engine in good order, then make it do all that it is built for, and as much more as you can get out of it. By many, oil is considered the best fuel for donkeys in the woods. It can be used satisfactorily and is cheaper than wood in many instances. The burners may be installed in many ways. The dimensions of the boiler, the manner in which it is fastened to donkey frame, and the style of ash pan govern the manner of installation. Fuel oil can be used in donkey boilers without injury to tubes or tube sheet, if properly installed.

Railway Equipment

The next important factors in getting the logs to the dump are the locomotives and the cars, the locomotive being the prime mover. Rod engines of the styles known as switchers, consolidated moguls or 10-wheelers will do good work on grades under 5 per cent.; over that we have what is known as the geared engine. Rod engines for logging work should have large boilers, heavy frames, large axles, rods and pins, and small drivers, and all the weight on drivers that your roadbed and bridges will stand; also equipped with oil burning apparatus where conditions will permit. It must be of good material; well designed for the purpose, and well put together, as locomotives for logging purposes should be much stronger in proportion to their steam pressure and cylinder area than those on standard trunk lines, on account of sharp curves, which rack the frames, and rough track and light rail, which injure springs, spring rigging, axles and pins. The boilers should be from 10 per cent. to 20 per cent. larger for logging than for any other purpose, as it is necessary to carry steam full stroke on grades, and in many cases have to run for the hills with the lever down among the oil cans, and keep it there for miles. In using a large boiler there is not only a surplus of water and steam but there is weight which will increase your adhesion to the rail.

The most important point to consider after purchasing locomotives is to see that they are kept in good condition for work. Lost motion on an engine working hard will pull the dollars out of your pockets quicker than the engine can earn them. A locomotive in good shape will pull 25 per cent. more logs than it will if allowed to rattle itself loose. Every dollar spent to keep your machinery in repair will pay 25 per cent. on the investment, if properly expended. When other loggers are held up on

account of engine failures you will be hauling logs to the dump. A large amount of power is lost through steam leaking under valves and through cylinder packing and out through the exhaust that should be exerting power on the pistons. Also watch wheels closely for flats and sharp flanges. Flat spots will loosen bolts, break wheels, axles and rails. Sharp flanges are dangerous to life, and expensive, as they cause many wrecks. They cut the rails, and it takes power to pull them around curves.

The geared engine is indispensable on steep grades and sharp curves and requires all the attention that should be given the rod engine. To get results all machinery must be kept in good repair. The man that keeps your machinery so that it will do all that it is built to do can save you lots of money and needs encouragement, as his lot is a hard one.

In the matter of cars, conditions govern the style used. I prefer the 41-foot flat 70,000-pound capacity; weight of car, 28,000 pounds; low deck; axles, $4\frac{1}{2}$ x8, 33 inches; 600-pound cast wheels; they are strong, safe and will bring in large loads. They can also be used for other freight and for road building. These cars should be equipped with air and automatic couplers, and should have the same care as to wheels and truck repairs as your locomotive.

Dr. B. E. Fernow's Views on the Management of Timber Limits

In a recent address before the Canadian Club at Guelph, Ont., Dr. Fernow dealt at some length with Canadian forestry problems. He sketched the regulations under which timber limits had been leased, showing how conditions resulted in rapid cutting and depletion of the superior stock. He complained also of indifference on the part of the various Governments. The Dominion Government had established a Forestry branch to look after such matters. This department received \$100,000 a year to look after 5,000,000 square miles of territory. In Quebec tentative and struggling efforts were being made. In Ontario, a branch had existed, but when a good man was secured to take charge, who showed an interest and a tendency to make changes, the department was abolished. He had heard much about the ranging system in Ontario, but in reality a great deal of money was being paid out with no returns.

"I could formulate a policy," he said, "and it would be along the lines followed in Prussia, where the Government owns, manages and cuts her own timber limits, logs the timber and sells it to whoever cares to buy. I see no reason why it could not be followed out here." Briefly, his idea would be to have a Royal Commission established to control the whole problem of forestry which might be worked out as a natural sequence to the establishment of the Conservation Commission.

The annual migration of the lumber jacks from Edmonton to the lumber camps up the river has begun. The lumber to be cut is again being curtailed this year in fear of the spring floods, and because it is not expected that the Dominion Government will have completed their storage booms on the river.

Tallman Brass & Metal Company Now in their New Quarters

The Tallman Brass & Metal Company, of Hamilton, Ont., which occupied quarters on Wellington street north for 13 years, have opened up their large new factory and foundry on Wilson street, east of Sanford avenue, and are already hard at work filling the many orders they have on hand for the winter trade. The Tallman Brass & Metal Company manufacture the well known Arctic metal, and in their new establishment have more than doubled every branch of their business. The Arctic metal department has been increased to four times its previous capacity. The metals used by this enterprising firm are imported direct, and the company does a large jobbing business in tin and lead, copper and aluminum ingots and antimony. Brass castings are a specialty and the installation of new and up-to-date machinery and equipment enables the company to turn out orders in quick time in the best of style.

The very latest machinery, including an ore crusher, which effects a great saving in metal, has been brought from different parts of the country, and the brass furnaces are of the latest pattern. All gases and fumes are carried outside of the building by special blowers.

Type metals, all grades of solder and ingot metals are manufactured in the new plant, and the company have facilities for turning out the largest brass castings used in the country. A fireproof pattern storage vault has been built and the whole place is practically fireproof and equipped with fire and burglar alarms. The new vault is a great protection to customers' patterns and will be greatly appreciated by the many patrons of the up-to-date firm. The new plant has temporary ends in all the buildings to facilitate expansion when necessary.

WANTED & FOR SALE DEPARTMENT

PUBLISHERS' NOTICE

Advertisements other than "Employment Wanted" will be inserted in this department at the rate of 15 cents per line each insertion, on the basis of 14 lines to an inch, payable in advance. When four or more consecutive insertions are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Employment Wanted" will be inserted at the rate of one cent a word, net. Cash must accompany order.

Advertisements must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED—LUMBER, ETC.

Hard Maple Wanted

LARGE QUANTITY HARD MAPLE SAWN to order for delivery as soon as dry. Box 869 CANADA LUMBERMAN, Toronto. 4

Hard Maple

WANTED—80,000 FEET OF NO. 1 COMMON and better 1½ inches Hard Maple. Apply, Box 855, CANADA LUMBERMAN, Toronto. 24

White Pine C. & B.

FROM 1 TO 5 CARS OF 1½ AND 2 INCH White Pine, Common and Better. M. McKINNON, Box 337, Cobalt, Ont. 24

Basswood and Ash Wanted

1" WINTER SAWN BASSWOOD, 1½" ASH. Will pay good price for good stock. Cash less 2% on cars inspection at mill. Box 873, CANADA LUMBERMAN. 3

Logs Wanted

BIRCH AND MAPLE LOGS DELIVERED at railroad or convenient for water shipment. Highest price for right quality. Box 850, CANADA LUMBERMAN, Toronto. 24

Lath Wanted

WANTED ¾ x 1½ x 4' HEMLOCK AND White Pine lath. Describe fully and quote lowest wholesale price on car, naming shipping point. C. A. LARNED, Phoenix, N.Y. 24

Birch

WE ARE IN THE MARKET FOR 300,000 to 400,000 ft. dry Birch of all thicknesses for this winter's shipment. State lowest prices with full particulars re quality, etc. Address THE LONDON LUMBER CO., London, Ont. 3

Soft Elm and Birch

WE ARE IN THE MARKET FOR A FEW cars of the following dry lumber:—2" soft elm No. 1 common or common and better, 6/4 and 8/4 birch, No. 1 common or common and better. Address, LONDON LUMBER COMPANY, London, Ont. 24

Birch, Basswood and Brown Ash

WE ARE IN WANT OF THE ABOVE stock, and will inspect and pay cash at the mill when quantities are large enough. State what you have of each kind, when sawn, thickness, length and lowest price. Box 865 CANADA LUMBERMAN, Toronto. 2

Soft Elm Wanted

WE REQUIRE ONE MILLION FEET OF Soft Elm sawn to our sizes for delivery as soon as shipping dry; will pay good price for choice stock. Parties in a position to supply some of this, please apply for further particulars to Box 849 Canada Lumberman, Toronto. 24

Cedar Wanted

WE WANT TO PURCHASE FOR QUICK shipment Square Cedar of merchantable quality, sizes 8 x 10, 10 x 10 and 10 x 12. Lengths 10 feet and up. We also want to contract for a considerable quantity for early spring shipment.

Write giving quantity you have and prices F.O.B. cars, to

MASON GORDON & CO.,

80 St. Francois Xavier St., Montreal, Que.

HAVE YOU ANY STOCK WHICH YOU wish to sell? If so, make the fact known to probable buyers by placing an advertisement in the Wanted and For Sale Department. Address, CANADA LUMBERMAN, Toronto.

FOR SALE—LUMBER, ETC.

For Sale

40,000 to 50,000 Tamarac and Jack Pine Cull Ties, from 4" to 6" face, 6" thick and 8' long. Address, THOS. CROCKETT, Fort William, Ont. 24

5/8" Red and White Pine

60 M. ft. 5/8 s/c White Pine
50 M. ft. 5/8 log run, Red Pine.
Box 864 CANADA LUMBERMAN, Toronto. 2

FOR SALE

2500 CEDAR AND TAMARACK POLES suitable for Piles and Telegraph Poles, 25 to 50 ft. long, and 6 inches and up at top end. THE MUSKOKA WOOD MFG. COY., Huntsville, Ont. 24

Red Pine

HAVE QUANTITY OF RED PINE SUITABLE for square timber, good lengths. Will cut to order. Write if interested BLACK & WAGAR, Temagami, New Ontario. 2

For Sale

1 Car 5/8 B Ash, C and B
1500 Telegraph Poles, 25 to 50 feet
5 Cars Extras M. B. Shingles
10 " Clears " " "
3 " and Clears " "
GEO. C. GOODFELLOW, Montreal. 24

Cherry, Sycamore, Chestnut, Etc.

50,000 ft. dry Cherry C. and B.
1 car 4/4 Sycamore C. and B.
1 car 6/4 Chestnut 1st and 2nd
2 cars 8/4 and 1 2/4 com. w. Oak
1 car 8/4 com. beech and H. Maple.
R. W. BAXTER, Chatham, Ont. 24

For Sale

THREE CARS OF SHORT PINE BOX and better, 2½" and wider x 14". Six cars of short Pine Box and better, 2½" and wider x 20". Two cars of short Pine Box and better, 2½" and wider x 24". Address CHARLTON SAWMILL CO., LTD., Collingwood, Ontario. 25

Quartersawed White Oak

FOR SALE—Quartersawed White Oak. 57,000 ft. 1 x 10 to 14" Indiana Quarter sawn White Oak, high grade ones and two National Rules of Inspection, band sawn and trimmed, bone dry, and every piece showing a flashy figure entire length. AMERICAN LUMBER & MFG. CO., Pittsburg, Pa. 1

For Sale at our Canada Storage Yard

65 M. FT. 3x6 12' NO. 1 CLEAR LONG LEAF Straight Grained Yellow Pine Pole Stock, BONE DRY. Will quote a special price to move quick. AMERICAN LUMBER & MFG. CO., Pittsburg, Pa. 24

Basswood Ash and Maple

4 cars 4/4" winter cut Basswood
4 cars 4/4 Brown Ash
6 cars 4/4 Soft Maple
2 cars 1½ and 2" Soft Maple.
To be graded good, mill run or common and better to suit purchaser. Address box 863 CANADA LUMBERMAN, Toronto. 24

FOR SALE—MACHINERY, ETC.

For Sale

SECOND-HAND BOILER 58 IN. x 14 FT. carriage and loghaul chain. PINE LUMBER Co., Pine, Ont. 2

Machinery for Sale

THE MACHINERY USED IN A WATER-power mill, the business of which is wound up, consisting of one rip-saw frame; one lath mill; shingle mill (Butterfield); clipper machine, 48 inch solid tooth saw; single hand edger with 16 inch saw; saw-frame hasher and carriage; two block carriage 14 inches long; feed works; rope feed spool and rigging; bull-wheel and chain; also bolting apparatus for grist-mill, and one hasher, small, in good order. For further particulars apply to J. D. McKINLEY, Ardoch, Ont., or to MACDONNELL & FARRELL, Kingston. 24

Engine and Boiler

FOR SALE—ONE FIFTY HORSE POWER Corliss engine, and one sixty-five horse power boiler, first-class condition, for \$800.00. Write for particulars, L. A. DELAPLANTE, LIMITED, 208 Main St., Toronto. 24

Machinery for Sale

50 H. P. MONARCH PORTABLE BOILER and 40 h.p. Engine, refitted, ready for work. One 30 h.p., Bell portable Engine and Boiler on wheels refitted. One No. 1 light portable 2 block Saw Mill complete. THE ROBT. BELL ENGINE & THRESHER CO., LTD., Seaford, Ont. 24

Heavy Saw Carriages

Rebuilt and Refitted

For Sale

1 Sawmill Carriage, left hand, W.E.W.Co. make, Reliance style, three heavy cast iron logseats, 40" opening, knees 28" high, boss dogs, Waterous double acting set works, double axles, 14" steel wheels, 50 ft. heavy track, heavy wood frame, in good condition.

1 Sawmill Carriage, left hand, Hamilton make, three heavy cast iron logseats, 46" opening, knees 26" high, boss dogs, double acting Waterous set works, four axles, 13" wheels, 50 ft. heavy track, heavy wood frame in good condition.

These Carriages are in stock and have been rebuilt, in first class shape.

THE WATEROUS ENGINE WORKS CO.
Brantford, Ont. 24

WANTED—EMPLOYMENT

Advertisements under this heading one cent a word per insertion.

WANTED—POSITION BY COMPETENT young man, as travelling salesman with White Pine or Hemlock manufacturer in territory tributary to Toronto. Box 877, CANADA LUMBERMAN, Toronto. 24

Wanted

POSITION WITH GOOD LIVE LUMBER firm, by a party thoroughly experienced in lumber business from office to stump. Eighteen years experience. At present manager of a plant with a capacity of 100,000 per day. Apply to Box 875, CANADA LUMBERMAN, Toronto. 24

Experienced Lumber Accountant

WANTS POSITION FOR MAY 1ST, 1910. Seven years experience in charge of large manufacturing offices. Now employed in that capacity. Conversant with French and English languages. Can supply best of references. Apply to box 872 CANADA LUMBERMAN, Toronto. 3

Pulp Wood Saleman

DESIRES POSITION WITH FIRM TO represent it in the States. Has large acquaintances among paper mills and understands the business thoroughly. Guarantees to sell 25,000 cords or better the first year. Apply to Pulp Salesman, Box 856 CANADA LUMBERMAN, Toronto 24

BUSINESS OPPORTUNITIES

Partner Wanted

WANTED A PARTNER WITH \$5,000 FOR A Shingle Mill and Broom Handle Factory, abundance of timber and good mill and shipping facilities. Box 70, Thessalon, Ont. 1

150 Acres Standing Virgin Timber

ABOUT 150 ACRES OF STANDING VIRGIN Timber—Maple, Elm, Hemlock and Cedar—on Lot 10, Con. 6, Reach (about two miles from Port Perry). Apply to PETER CHRISTIE, Manchester, Ont. 1

Saw Mill and Chopping Mill

SAWMILL AND CHOPPING MILL FOR sale in good locality, no opposition, good reasons for selling, good earnings, everything A. 1., running every day. For further particulars apply Box 195 JORDAN, ONT. 24

BARGAIN IF SOLD AT ONCE. SAW Mill, capacity 10,000. Apply F. HOLT, Torrance, Ont. 24

For Sale

IN PARRY SOUND DISTRICT, SAWMILL capacity 20M, also one timber limit, 8,000 acres Snap for quick buyer. Box 851, CANADA LUMBERMAN, Toronto. 24

African Mahogany

BRITISH FIRM WHO MAKE A SPECIALTY of Mahogany and hold stocks of various kinds suitable for the Canadian market, want to get in touch with firms who would act as their agents in Canada. Box 871, CANADA LUMBERMAN, Toronto. 3

Sale of Valuable Timber Limits

In the Lake Temiscamingue District

THE UNDERSIGNED OFFER FOR SALE by tender, Berths Number 1 in the Second Range and No. 1 in the Third Range, Block A., in the Province of Quebec.

These berths lie immediately east of the interprovincial boundary line, for a distance of twenty miles, measuring north from the tenth mile post north of Lake Temiscamingue.

They have an area, as described by the current licenses, of ninety and one-half square miles, and the timber growth is mostly spruce of a superior quality. Tenders will be received up to twelve o'clock noon of the FIRST DAY OF MARCH NEXT. The highest nor any tender not necessarily accepted.

Any further information as to terms and conditions of sale, or other particulars, can be had by inquiry from the owners.

THE BRONSON COMPANY.

Ottawa, 1st December, 1909. 3

How \$5,000 will net you
\$3,000 to \$5,000 a
year for life

READ CAREFULLY

MILL SUPERINTENDENT. WE OWN IN

Nova Scotia new small complete mill, capacity 15,000 to 20,000, lath mill 30,000, located mouth of river, tide water, that will furnish spruce and white pine for 25 years guaranteed. Cheap rates Boston and New York. Help—Scotch descent, plentiful. Absolutely no other industry near. 80% wages paid through commissary, which will net \$1000 year profit. Owners live a thousand miles away, not practical mill men, but will market all material at \$3 to \$4 per thousand, net profit to you. To one or more thrifty economical practical men, this is a chance of a lifetime.

Temiskaming. CYRIL T. YOUNG, Chairman, Pub-
licity Dept., Board of Trade, Haileybury. 5

Sale of Timber at Rondeau Park

A QUANTITY OF STANDING TIMBER ON
Rondeau Provincial Park, County of Kent,
Ontario, is offered for sale by public tender on
MONDAY, 3RD JANUARY, 1910, consisting of
basewood, ash, elm, beech, maple, oak, hickory and
other kinds of mature timber, or timber requiring to
be cut and removed in the proper management of
the forest.

For particulars and conditions of sale apply to

F. COCHRANE,
Minister of Lands, Forests and Mines.

Toronto, 29th November, 1909. 1

Timber Lands and Saw Mills for Sale

The UNDERSIGNED Offers:—

Parcel 1. Ste Anne des Monts property situated
on the South Shore of the St. Lawrence River,
Gaspé County, Quebec, about 1000 acres of Seign-
iory or Fee Simple lands—at the mouth of the Ste
Anne des Monts upon which is located a well
equipped lumber and shingle mill with ample steam
power, electric lighting, with a capacity of 25,000
feet of Lumber and 125,000 to 150,000 pieces of
Shingles each ten hours—also Dwellings for work-
men, Stable, Store houses, Repair Shops and Mill
Pond and storage facilities for logs.

About 300 square miles of licensed timber lands
upon which disinterested Explorers make a minimum
estimate of over 350 Million feet of saw logs,
principally spruce, fir and cedar, and 595,000 cords
of Spoolwood, and Pulpwood.

All on drivable streams an average of not over 30
miles to Mill Pond.

And all shanty plant tools and equipment on the
property.

Parcel 2. What logs are now in the river esti-
mated 3 Million feet board measure.

Parcel 3. Grande Vallée property situated about
sixty miles east of Ste Anne des Monts on the South
Shore of the St. Lawrence River in the County of
Gaspé, Quebec.

About 54 square miles of Seignior or Fee Simple
lands and 100 square miles of Licensed lands.

A new Mill consisting of a steam feed Circular
saws—1 Mershon Horizontal resaw—with all sub-
sidiary Machinery and ample steam power and
electric lighting.

Capacity 50,000 to 75,000 feet of Lumber each ten
hours—A practically new Mill for sawing shingles
and railway ties.

With ample steam power and electric lighting to
produce 125,000 to 150,000 shingles each ten hours.

All the shanty plants, tools and equipment on the
property.

On the timber lands, disinterested Explorers
minimum reports are 100 Million feet saw logs,
principally spruce, fir and cedar and two hundred
and forty five thousand cords Pulp and Spool
Wood.

For further particulars, address,

C. A. MILLINER,
Deseronto,
Ont.

& Co., The Bank of Nova Scotia.

Ruthlessly Destroying the Timber

There is no more striking ex-
ample on the Pacific coast of the
ruthless destruction of timber than
that which follows the gathering of
oak tan bark. In the counties of
Humboldt and Mendocino in Cali-
fornia, the industry of securing oak
tan bark has attained considerable
proportions. Oak trees 18 inches to
3½ feet in diameter, up to 40 feet
to the limbs, are not uncommon.
To secure this bark the trees are
felled and the bark stripped. The
timber is left untouched on the
ground to rot. Until railroad trans-
portation can be furnished, this
waste will probably continue. The
bark, in many instances, is se-
cured from individual claims, taken
up by homesteaders, the timber
growth being practically all oak,
which is sacrificed in order to eke
out a precarious livelihood. From
400 to 600 cords of bark can be
obtained from a claim. Thousands
of feet of good oak timber are sac-
rificed each year to the bark ga-
therer.

British Columbia Timber Limits and Going Sawmill Concerns

To close an estate the Advertiser offers for sale

39,800 Acres of Selected Timber Lands

in the interior of British Columbia, very accessible, and
reported upon by Government Cruisers to carry over

600,000,000 ft. B.M. of High Class Timber

together with two first-class sawmills, now operating, which have been
erected and equipped at a cost of over \$200,000, and which have a combined
capacity of over twenty million feet B.M. per annum, and are now
doing a very profitable business. Also logging plant, horses, buildings,
franchises, charters, steamers and all operating equipment, for the sum
of \$600,000.

This price is considerably less than the present value of the
standing timber alone, which in six years will undoubtedly have a
stumpage value of over \$5.00 per thousand, or over \$3,000,000. Over
\$100,000 profit per annum can be realized from operating under present
conditions. This offers

the best operating and timber holding
investment in Western America

and will bear the most stringent investigation. Terms of payment ex-
tending over a number of years will be given to responsible parties.
Only those in position to handle need apply. Write in first instance to

Review of Current Trade Conditions

Ontario

The holiday season has already commenced to affect business, as is usual at this time of year. But, comparatively speaking, the effect is only slight. A slight dullness prevails, but orders are fairly numerous and prices are well maintained. The demand from the northern States is brisk for all grades but mill culls, and people who are in touch with the situation believe that they will improve by spring. Hemlock can be marketed across the border at prices 75 cents to \$1.50 above Ontario prices. Lath are in good demand and are expected to become quite scarce. The shingle situation gives occasional signs of improving.

At Ottawa the movement of lumber since November 15th, when the navigation closed, has been quiet, orders being only for the purpose of filling stocks. Prices, however, are quite firm in the upper grades of pine. The best sidings and strips are to-day selling at about \$8 a thousand more than they were this time last year. In fact, they were never higher in the history of the lumber trade. There is a strong demand also for good shorts, the 2-inch variety selling at \$42 to \$45, which is almost equal to the current price for 2-inch good strips, which bring from \$45 to \$50. There is a firm demand for 2-inch good sidings at from \$55 to \$60. Middlemen who are in possession of the greater part of the good white pine stock are very optimistic and are holding for higher prices. No. 1 dressing sidings, strips and shorts are all firmer, especially for the thicker varieties. Large deliveries of box lumber before the close of navigation assisted in stiffening the price for this grade. Shipping culls are rather plentiful and dead culls are scarce, the latter selling firmly at \$12 per thousand. There has been an increase in the price of railway ties of about three cents each, and the indications are that they will go still higher on account of the difficulty in obtaining good material in the woods. The best quality 6-inch are bringing 45 to 50 cents each, and for special orders of 7-inch, 53 to 58 cents is being paid. 50-foot lengths of telegraph poles are scarce and are selling at from \$10 to \$17.

Eastern Canada

Much interest is being taken at St. John in the situation regarding spruce lath. It is stated that as high as \$3.10 for dutiable lath f.o.b. St. John is being paid. In reality, however, the highest current price is from \$2.90 to \$3 per thousand. The price of spruce lath has fluctuated extensively during the last two months. St. John dealers are showing quite an interest in the estimated arrivals from portable mills and inland points during the winter. It is thought that the receipts from this source will be much smaller than they were in previous winters because of the unfavorable weather which has prevailed so far. It is generally thought that the price of spruce lath has reached the highest point, so far as St. John is concerned, as they have shown no tendency to increase for several weeks past. It is quite possible, however, that still further advances may occur.

"American" spruce deal have shown considerable signs of stiffening in price during the last few weeks, although for months previous to that time they had been very steady. The output of American deals at St. John has been only moderate. There has also been only a moderate cut of clapboards, and stocks at present are practically nil. Stocks of spruce boards have been increasing rapidly in the past month until at present they amount to some eight or nine hundred thousand feet. The market for this line is unchanged, the dutiable article selling at St. John at present for \$12.25 to \$12.50 per thousand.

The market for spruce at Boston has been rather quiet. Some dealers look for higher prices, but this would need a more vigorous de-

mand. Frames 9-inch and under are selling at \$23.50 to \$25. Very few sales, however, can be made above \$24. Random is quiet with the price steady. Boards are showing no change.

At New York, although the prices asked for spruce are higher, the competition from mill points is keeping prices down. Local stocks are ample. Building conditions are promising in the outlying districts and higher price tendencies are expected. The demand for shingles at Boston is rather dull. Buyers are still out of the market. The best cedar extras are held at \$3.75, some even asking more. Even at \$3.50 sales are scarce. Lath continue firm. Prices range from \$4.25 to \$4.40 for 1½-inch.

Western Canada

The only unpromising condition in connection with the lumber business in the West is the situation in connection with shingles. With shingles at \$1.50 to \$1.60, and bolts costing from \$4.50 to \$5.25, conditions are even more unsatisfactory than they were some four years ago when the price of shingles fell to \$1.30. Over-production is blamed almost entirely for this situation and the high duty on shingles going into the United States is also a factor. The situation in regard to lumber generally is extremely satisfactory. Prices have recently been advanced \$1 a thousand and the demand for all good grades of lumber has been so strong that many of the large mills have been obliged to call in their travellers as they could not handle all the business they were obtaining. The price to-day is only \$1 lower than the price obtained in 1906. Available stocks are low. In fact it is estimated that lumber holdings to-day total only about 40 per cent. of the usual quantity at this time of year. Inquiries among retailers upon the prairies also indicate that yard stocks are very low.

Good fir logs are selling at \$7 to \$9 delivered, and there is a prospect of an advance of \$1 to \$1.50 during the next two months. Cedar logs from private limits are in poor demand. Those taken from Crown granted lands for export, are selling at from \$8 to \$9. Fir logs on the Puget Sound are scarce, selling at \$8.25 to \$9.25 delivered at the mills. It is expected that the price will advance to \$11 before long.

Great Britain

The political situation is having the effect which was expected upon trade in Great Britain. No decided improvement is looked for until the elections are over. The import season from most of the centres of production is almost over. The receipt of the last shipments of pine deals from Canada finds prices very much better all around, especially for the upper qualities. The improvement, however, is not caused by the demand in Great Britain, but by that in the United States and Canada. It is expected that the opening of the next season will show an even greater advance in prices. Stocks in Great Britain are heavy but are being held firmly. At Liverpool there is no improvement in values of birch logs, as the demand is only moderate and the stocks are ample. This applies particularly to St. John and Halifax logs. The supply of Quebec logs is not too heavy for the demand. The demand for planks has eased off a good deal but stocks are not too heavy. Prices, however, are a shade easier. The price of pitch pine c.i.f. is unchanged. At Manchester the trade has declined somewhat. The depression in the cotton industry is growing worse and is affecting every other trade, that of lumber included. Prices generally are steady but good inquiries and sales are so few that the outlook is unpromising.

Importations at Glasgow are very restricted and there has been quite a satisfactory turnover of stocks. Buyers are finding that the talk of

higher values is well founded and they are now replenishing stocks at the current low prices. It is confidently expected that values generally will be very much higher before they show a downward tendency. There is an apparent disinclination at most of the shipping points to consign to the Glasgow market until higher rates are assured. Quotations are being quietly marked up as a result of the great reduction of stocks. Pine sidings continue in good demand with low stocks. Deals have been moving more freely. Spruce has been rather quiet. Good square deals are rather scarce and better prices are looked for.

United States

The periodical decrease in the movement of lumber which is noticeable in the United States at this season of the year, is not by any means so extensive as it was last year. This is accounted for largely by the great activity in building in the large cities. So much building is planned and under way that city dealers are experiencing a pretty active trade, which promises to continue throughout the winter. Improvement in the tone of general business is also an important factor and the demand for lumber from large consuming industries is very brisk. A strong feature of the situation is the continued demand for car material, which has recently been on the increase, and has caused a good demand for southern pine, Pacific coast lumber and northern pine. At Chicago the demand for white pine is quite firm and prices are stiff, with a tendency to advance in the upper grades. There is a marked scarcity of 6-inch, 10-inch and 12-inch, both in 1 and 2-inch. There is a fairly good demand also at Chicago for common lumber, while doors, ceiling, siding, flooring, etc., are also selling well. For coarse lumber there is a poor demand, especially No. 4 and No. 5. Piece stuff is the main feature of the hemlock market in Chicago, and in spite of the lateness of the season the demand continues fairly good. Higher prices are looked for in western fir, spruce and cedar. Yellow pine has apparently gained in strength. There is something of a scarcity in No. 2 dimension and some other lines of yard stock, and orders are expected to turn up in considerable numbers. Car factories and railway companies are still placing substantial orders. There is still, however, a great deal of improvement possible in this class of lumber. Red cedar shingles are somewhat firmer at Chicago as a result of the shutdown of the Washington mills. Sales of red cedar are being made at \$3.17 for clears and \$2.59 for stars. White cedars are steady but the demand is dull. Lath are firm with good demand.

At Buffalo the demand for northern pine is still strong in the upper grades and there is considerable improvement in the lower grades as a result of the improved demand for boxes. No. 3 barn and lower grades are rather too plentiful, but prices are being held without any sacrifice. The trade in hemlock at Buffalo is good, as lake dealers are selling at prices which demand a large portion of the trade. The strength in yellow pine has assisted hemlock. The Pacific coast products are attracting more attention at Buffalo, particularly fir. Spruce also is selling well and red cedar shingles are in fair demand. Red cedar siding is also improved. Prices are all about steady. The shingle trade is active at Buffalo and prices are steady. Red cedar clears are the only variety in large demand. Stocks are plentiful for the winter and although the periodical price cutting is about due there is none at present in sight.

At New York there is a better tone to the market for northern pine. The high grades, as usual, are in better demand than the low. Prices are higher and wholesalers are expecting an improvement in trade. The demand for hemlock at New York is somewhat limited but supplies at mill points are not heavy and stocks in New York are light. Higher prices are looked for in the spring.

The hardwood situation at Chicago is favorable, though there is a scarcity of dry lumber and cars are difficult to secure. The demand from the interior finish factories, implement and wagon industries, is not commensurate with the great activity displayed. Apparently these industries are fairly well supplied with reserve stocks. Plain dry oak is still in good demand with the price hardening. Quartered white and red oak are strong. White ash is selling fairly well but brown ash is a trifle slow. The upper grades of basswood are in good demand and birch is still the feature of the northern woods. Rock and soft elm lumber have been a trifle heavy.

The Pacific coast mills have advanced the price of rough lumber \$1 per thousand, and it is reported that there will be another advance within a few months. Mill men state that for some time the price of lumber has not been commensurate with the price of logs, and they, in fact, have been selling for less than the cost of production. The increase is effective now and some mills are refusing to book orders for the new year in anticipation of another advance. Several mills have called in their travellers as their hands are filled until the new year.

The Rat Portage Lumber Company, Limited, Winnipeg, referring to the recent advance of \$1 in the price of lumber, report that while there has been no particular rush during the fall trade, still there has been a steady demand. Owing to the fact that stocks in the retail yards are becoming pretty light they expect a rush demand of sorting-up orders after the first of the year, with a consequent advance in price over that which is now being quoted.

Market Correspondence

New Brunswick News—Spruce Lath are High

St. John, N.B., Dec. 7.—The week in the lumber industry in this section has been marked by several events of more than ordinary interest. The first of December marked what is generally considered the end of the manufacturing season at the local mills. While several of the larger plants are still running, it is regarded as only a matter of a few days until all save two will be closed down for the winter. Mr. Charles Miller's mill closed down on November 27th, and Mr. Harry Miller's a week earlier. It is expected that Messrs. John E. Moore & Company's plant at Pleasant Point, Messrs. J. R. Warner & Company's, and Messrs. Hilyard Bros.' will be finished about Dec. 10th. The other local plants—with the two exceptions noted—will, no doubt, continue sawing as long as the mild weather continues.

The conditions governing the getting out of logs in the woods throughout this province and in that portion of Quebec situated at the head of the St. John river—where a number of local mill owners have large operations—have been remarkably unfavorable up till present writing. The weather has continued uniformly warm, the ground has been very soft, and such small quantities of snow as have fallen, being of a slushy nature, have served to retard rather than aid the work, which has moved very slowly. Most operations are already far behind in quantity what was figured on for this date. The work has been, so far, very expensive and has been carried on under great difficulties.

Of the different lines in which local people are interested, that which is being most closely watched is spruce lath, not because it is the most important, but because of the fluctuations in price which have occurred in the lath trade during the last two months. While manufacturers are interested only to the extent of such as they have on their wharves, local dealers have in mind such lots as may come in from the portable mills at inland points during the winter months. Receipts from this latter source promise to be far less in quantity than has been the case for several winters, owing to the unseasonable weather which is delaying operations. Generally speaking, it would seem as if spruce lath had touched the highest point so far as local prices are concerned. This conclusion is due to the fact that the figures mentioned in buying negotiations seem to be no higher, as far as can be learned, than has been the case for several weeks past. At the same time it is regarded as within the probabilities that lath may go higher than the present remarkably high figures. It has been stated that as high as \$3.10 has been paid for dutiable lath f.o.b. St. John, but the highest figure which could be called current, it from \$2.90 to \$3 per thousand.

The local market for "American" spruce deal has shown a lack of fluctuation or change for several months past until the past few weeks, when values in this line have shown considerable signs of stiffening, although it is difficult to say whether or not such indications are important just at this particular season.

The season's output of "American" deals at local mills has been only moderate in quantity, as at least two of the "American" plants have sawn little, if any, logs cut on the American side. At present writing the total local holdings of "American" spruce deals would not amount to more than from one to one and a quarter millions of superficial feet.

Another line in which the season's output has been very light is clapboards. It is doubtful if the weekly output has been more than twenty-five thousand. Stock in this line have at no time been important, and at present there are practically none to be had.

Spruce boards have multiplied in quantity considerably during the past month, and at present the local holdings amount to between eight hundred and nine hundred thousand superficial feet. Trading in this line has shown no important developments and the local value of the dutiable article at present writing ranges from \$12.25 to \$12.50 per thousand superficial feet.

Ottawa Valley News—Trade Quiet

Ottawa, Dec. 10.—The lumber mills of the Ottawa valley have continued operations farther into the winter than for many years past, but few of them were able to make up entirely for the set back given to production in the early summer when the floods cut off some six weeks from the manufacturing season. J. R. Booth's mill closed on December 4th, but for the last month had been running only day shift. The Booth mill cut will be between 75 and 80 million feet, or about 12 million feet less than in 1908. The firm's salesman states that the late summer was far better than the year before for manufacturing on account of good water conditions, but no circumstance could possibly counteract the fact that the mill was idle six weeks at the beginning of the summer. The May cut is always ready for shipment in August, and when the trade cannot draw on the early output of the mill, shipping sustains a severe drawback. So urgent is the demand for all pine better than shipping

culls now, however, that some is being loaded green. The Shepard & Morse Lumber Company had a very good season, cutting 33 million feet, of which 15 million were sawn for it by Fraser & Company's mill at Deschenes. Ritchie Bros., at Aylmer, who cut a lot of the Shepard & Morse logs in 1908, did not cut for that firm the past season.

Just now the orders coming in to local lumbermen are chiefly to fill in stocks. Since November 15, when navigation closed, the general movement of lumber has been quiet, but still prices are exceedingly firm for upper grades of pine. One of the largest lumber manufacturers in the Ottawa valley told the "Canada Lumberman" that the best sidings and strips, taken all round, commanded figures \$8 per thousand ahead of last year. They never were higher in the history of the trade. Good shorts are also in active demand and the two-inch variety is sold by J. R. Booth at the same price as two-inch good strips. Two-inch good sidings, seven and up, are firm at from \$55 to \$60 per thousand, and two-inch good strips bring from \$45 to \$50 per thousand. Most of this and similar good white pine stock is in the hands of middlemen, who are so optimistic of the future of the market that they are holding out for steep prices. It is learned that only the fourth class of deal for the British market went as low as last year's rates. The third quality brought an advance of three per cent. and the first and second qualities brought an advance of ten per cent. The average increase on the stock sold to the British buyers was at least 5 per cent.

Advances have also taken place in No. 1 dressing, sidings, strips and shorts, the thick sorts in all cases being the firmer. Williams, Edwards & Company, large wholesale dealers in white and red pine spruce lath, etc., state that there is a decidedly better tone to the lumber market than earlier in the season. They confirm the reports as to all the high grades of pine being picked up, and they find box lumber getting scarce as a result of large deliveries before water shipping ceased.

It is noticed that while box lumber and shipping culls are plentiful dead culls are pretty well thinned out. This is partly due to the extensive building operations in the vicinity of Ottawa. The value of building permits is \$5,000,000 in Ottawa this year, or twice that of the year before. Hemlock, at \$14 per thousand for one-inch stock and \$16 for two-inch, often replaces dead culls on account of the guaranteed soundness of hemlock. But many builders prefer the pine stock of poorer grade, as it is so much easier worked by the carpenters. Dead culls are now fairly firm at \$12 per thousand. Railway ties have advanced two or three cents apiece, and the prospects are for further rises. The quantity being taken out in the woods is not at all commensurate with next summer's prospective demand. Owing to the difficulty of finding the material for keeping up the increasing supplies needed by the railways, dealers are looking for marked advances next summer. The G. T. R. were obliged this season to draw on the eastern market and had many ties shipped from the district served by the Intercolonial Railway. The tie output of Booth's mill was disposed of among the G.T.R., C.P.R. and C.N.R. Six-inch railway ties of best quality run firm from 45 to 50 cents each, and the C.P.R. pays one-fifth more for special orders of seven-inch ties. One large mill which used to turn out many cedar ties and telegraph poles, finds that the timber yields a far larger return when made into shingles, the best brand of which is worth \$4.50 per thousand. J. R. Booth has practically abandoned the making of cedar telegraph poles on account of the better return from the cedar when made into either ties or shingles. Any of the lumbermen with forests containing wood for long telegraph poles, find it to their advantage to cater for this business. Lengths of 50 feet are extremely difficult to get and command from \$10 up to \$17.

The following comparative statement of timber measured and culled is issued by the Supervisor of Cullers' Office, Quebec, under date of December 7th:

	1907	1908	1909
Waney white pinecubic feet	1,139,960	990,640	738,840
White pine	136,200	132,560	57,520
Red pine	8,400	8,200	8,680
Oak	404,160	527,000	568,960
Elm	212,360	87,640	108,080
Ash	25,880	8,040	520
Birch and maple	82,200	86,920	60,840

The situation in the yellow pine markets has been depressed recently by the large amount of timber which has been blown down by storm and will have to be manufactured at once if it is to be saved. A tornado which recently swept through the southern pine country felled great quantities of valuable timber, variously estimated as amounting to from twelve to sixteen billion feet. This difficulty, added to the various other tribulations of the southern pine manufacturers, has given rise to increased anxiety in the South.

The mill of the Bay Shore Lumber Company at Great Salmon river, N.B., has suspended operations until spring, after a very successful season. This winter the company expects to get out 5,000,000 feet of logs at Great Salmon river. At St. Martins, Tynemouth creek and Black river they will cut about 10,000 cords of pulp wood.

Burns

A Lumberman from Ottawa Valley writes us as follows:

DEAR SIR:

The Solid Tooth Saws I purchased from you last spring have been doing first class work ever since. I have never had any trouble with them. The Burns Saws are the best, as they are evenly tempered and will keep an edge longer than any other make of saw used here. Yours truly,

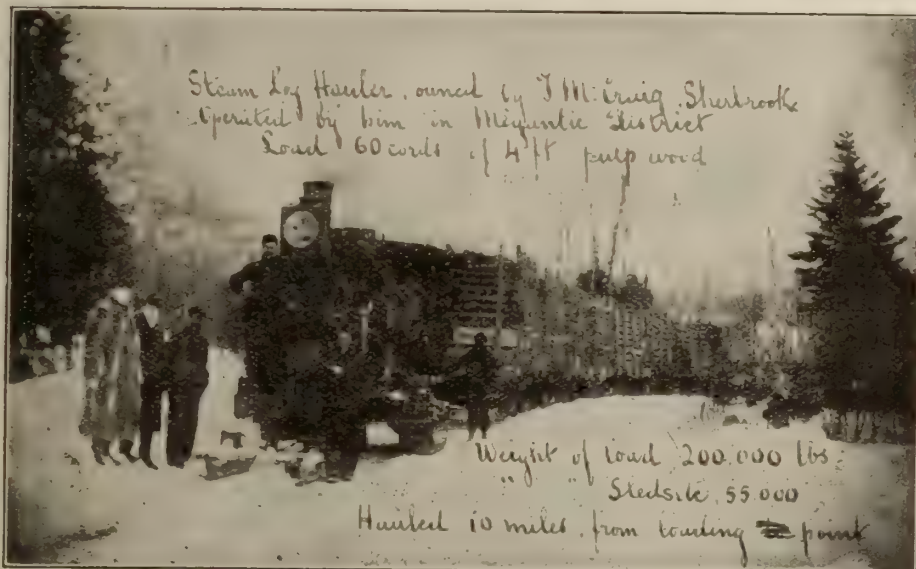

Saws

Such letters as this prove that

Burns Solid Tooth Saws are as famous as their Inserted Tooth Saw, containing genuine Hoe Fittings.

Get a Burns Saw and forget your Saw Troubles

The Lombard Steam Log Hauler

Dominion of Canada Patent No. 108676.

What Users Say

Our Engine has worked steadily this winter. It has been out all day, and sometimes all night, in a temperature varying from 30 below to 55 below zero. We are at present hauling loads of 80,000 ft. of green rough lumber a distance of 60 miles per day. There are some heavy grades upon the road which we find the Engine climbs well.

EDGINGS

Ontario

M. F. Fraser, Pembroke, Ont., is about to construct a sawmill at the head of Hazley's Bay.

Irvine Lumber & Fuel Company, Brampton, Ont., have advertised their plant for sale by tender.

Sawing operations at the Golden Lake Lumber Company's mills at Golden Lake and Barry's Bay, Ont., have ceased for the season.

The Canadian Cooperage Company, which has had its plant at Galetta, Ont., for some seven years, will move the mills next year.

A large quantity of black walnut timber is being hewed in the G. T. R. yards at Glencoe, Ont., for shipment to England, by Shields Bros.

A scowload of lumber containing 75,000 feet, belonging to Seamen, Kent & Company, was washed ashore near Meaford, Ont., in a recent heavy gale.

The Howard Lumber & Trading Company, Limited, Melissa, Ont., capital \$40,000, has been incorporated. The incorporators are N. H. Howard, Melissa, and J. W. Staples, Novar, Ont.

Chew Brothers, Midland, Ont., have closed their mill for the season. Their cut amounted to 11,730,000 feet of lumber, 4,394,000 pieces of lath, 3,000 ties and 80,000 broom handles.

An advance estimate of the season's cut on the Georgian bay places it at 450,000,000 feet, a considerable increase over the season of 1908. Nearly all the stock held by the mills has been sold.

The Mershon, Eddy, Parker Company, of Bay City, Mich., will take over next season the cut of Eddy Bros. & Company at Blind River, Ont., who manufacture about 30,000,000 feet annually.

The J. R. Booth mills at Ottawa closed on Dec. 2nd. Several hundred of the employees have been sent to the woods and some of the others are being employed in other departments of the business.

The Kent-Cooper Lumber Company, Limited, Collingwood, Ont., has been incorporated with capital of \$40,000. The incorporators are F. Kent, Meaford, Ont.; D. G. Cooper and K. N. Cooper, Collingwood, and R. Harmer and W. B. Seaman, both of Toronto.

The Standard Chemical Company, of Toronto, are considering establishing a refinery at Sault Ste. Marie, Ont., at a cost of \$200,000. They expect to refine the product of six factories in Ontario and Quebec. The plant when complete will carbonize 424 cords daily.

Chas. Howson, who recently purchased the Dodd's sawmill property, at Goderich, Ont., has moved the machinery to the village and has erected a building near the station. Mr. Howson has purchased a large quantity of timber and will manufacture rollers and spindles for the British market.

The Krug Bros. Company, Limited, Chesley, Ont., has been incorporated to take over the business, plant, lands, etc., of the firm of Krug Bros. & Company and the Chesley Rake & Novelty Company, Limited, and to buy and operate sawmills. The incorporators are J. Krug, C. Krug and H. Ankerman, all of Chesley.

Fire destroyed the sash and door factory owned by C. E. Naylor, at Essex, Ont., on Dec. 5. The flames also devoured the village's electric lighting plant and a flour mill owned by Mr. Naylor. The damage is estimated at \$50,000 and insurance was only \$10,000. About \$3,000 worth of stock in the sash and door factory was also destroyed.

The Hope Lumber Company have purchased the Geo. T. Burtis sawmill at Thessalon, Ont. The mill will be overhauled during the winter and it is reported that the improvements contemplated will cost from \$10,000 to \$15,000. Next season the mill will be operated to its full capacity and it is stated that the company have 125,000,000 feet to cut. E. B. Foss & Company, of Bay City, Mich., are largely interested in the company.

W. P. Gillespie and P. H. Cronin, of Toronto, are provisional directors of the Lumber Vulcanizing Corporation of Canada, in addition to those mentioned in a previous report. The company control a process of treating pine and soft gum woods which will seal the pores and harden the wood and prevent decay. It is expected to be especially valuable for railway ties and it is stated also that wood so treated can be polished and made to resemble mahogany closely.

The Cutler Bay Lumber Company, Limited, Cutler, Ont., has been incorporated with a capital of \$300,000; the incorporators are C. McCrea, G. J. Valin, and A. J. Manley, all of Sudbury, Ont. Trott Brothers, Limited, Oil City, Ont., capital \$50,000, have been incorporated to carry on business as timber merchants, saw and planing mill proprietors, timber growers, etc.; the incorporators are E. Trott, W. J. Trott and B. G. Trott, all of Oil City.

The Ogdensburg Soda Pulp Company proposes to build in Prescott, Ont., early next year, with a weekly payroll of \$1,500 and about 75 to 80 hands. The company has secured an option on the buildings of the Prescott Starch Company. It was the intention of the company to locate in Ogdensburg, N.Y., but the recent tariff measure has so changed things that the saving by locating in Prescott would be considerable. The company has secured a large area of sunken pine and pine slabs, as well as many acres of poplar timber for the making of soda pulp, and proposes to build a 50-ton plant.

It is estimated that the Canadian Northern Railroad next year will need 2,000,000 ties. A certain percentage of these will be used for repair work, but the majority will be for new lines. The company have already contracted with the Northern Construction Company to take out one million in the vicinity of Fort Frances, and other contracts will be made with the mountain mill men for those lines to be built in British Columbia and western Alberta. The Grand Trunk Pacific will require a million or more for its new lines, while the Canadian Pacific can utilize another million for new lines and repairs. The Hill lines will also require a large number, so it is conservatively estimated by lumbermen that five million will be used during 1910.

The season on the Erie canal, which closed recently, showed an increase of nearly 6,000,000 feet in the shipment of lumber from the Tonawandas as against last year, but it was the second smallest season since 1873. For 1909 a total of 66,875,194 feet was forwarded. With the exception of last year no season since 1873 has shown the shipment of less than 100,000,000 feet. During the

interim it was a frequent occurrence for the season's record to go considerably above 200,000,000 feet. Several years were recorded where the shipments exceeded 350,000,000 feet. In 1884 the highest point in the shipment of lumber from the Tonawandas was reached, when a total of 380,000,000 feet left the Tonawandas over the canal. The second largest year in the history of the port was in 1890, when more than 363,000,000 feet were forwarded.

Eastern Provinces

The prolonged mild and wet weather have seriously retarded lumber operations on the Restigouche river in New Brunswick.

The Creek sawmill in Dalhousie, N.B., formerly owned by Mr. Chris. Donaldson, has been bought by Mr. John Playfair. The new owner has moved out the machinery, so that the hum of the saw will no more be heard in that quarter.

In order to supply the Canadian market more cheaply the Escanaba Manufacturing Company, of Escanaba, Mich., is arranging to erect a factory near Montreal, Que. Wooden butter dishes, pie plates and probably clothes pins, will be turned out.

The electric log piler recently installed by the MacLaren Lumber Company at Buckingham, Que., has proved a success. The logs are hoisted to the rollways by means of an endless chain which is run by an electric motor installed on a float placed in the eddy.

A merger of various timber limits in the Murray Bay district of Quebec is understood to be in progress, aggregating in all something like a million dollars in value. The largest holders are Americans, believed to be chiefly interested in the Baie St. Paul Lumber Company.

The News Pulp & Paper Company, Limited, of Canada, have been incorporated with a capital stock of one million dollars and head office at Montreal. The incorporators are: G. G. Foster, K.C.; J. T. Hackett, T. J. Coonan, secretary; K. Archibald and T. B. Gould, all of Montreal.

It is reported that Donald Fraser & Sons will erect another mill at Fredericton, N.B., to take the place of the Aberdeen mill, destroyed some years ago by fire. It is also stated that the Odell estate have sold their property at Fredericton to Donald Fraser & Sons for about \$35,000.

United States capitalists have just closed another large Newfoundland pulp deal. They will operate under the title of the West Coast Pulp & Lumber Company, with a capital, it is reported, of \$4,500,000. The property consists of 305 square miles of timber lands in the vicinity of Robinson river.

F. E. Neale, of Campbellton, N.B., has shipped during the present year 26,000,000 feet from Miramichi; 19,000,000 feet from Campbellton and Dalhousie; 7,000,000 feet from Cape Tormentine; 3,500,000 feet from Gaspe coast; 2,500,000 from Richibucto and Rexton, and 2,000,000 from Bathurst, a total of 60,000,000, valued at \$800,000.

The Petite Riviere Lumber Company, Limited, Quebec, Que., has been incorporated with capital of \$50,000; the incorporators are C. Koenig, G. Parent and L. Letourneau, all of Quebec. The Automatic Wood Box & Turning Company, Quebec, Que., has been incorporated with capital of \$10,000; the incorporators are L. Letourneau, N. Boivin, E. Lamontagne and J. Samson, all of Quebec.

Messrs. K. & V. Nordin's new long lumber mill at Head of Tide, N.B., has commenced sawing. This firm recently purchased a block of land near the river at Head of Tide and erected a factory for the manufacture of all kinds of finished lumber. The factory was in operation all last summer. New plant and buildings have been added until the plant is one of the most up-to-date factories in a small way, in the province. By the addition of a rotary mill to cut the long lumber this firm can now manufacture lumber from the round log to the finished product.

The old mill belonging to Adams & Burns, at Bathurst, N.B., which was purchased recently by the Nepisiguit Lumber Company, has been entirely torn down and a new mill is being erected on the site. The new mill is of the two-sided variety. It is 64 feet by 192 feet. The machinery will be all new and contracts have been closed for its erection. The entire equipment, including band saws, circular saws, etc., will be supplied by the Clarke Brothers Company, of Belmont, N.Y. The burner for the disposal of the mill refuse, which will measure 25 feet by 100 feet, will be supplied by the Waterman Engine Works, Brantford, Ont., while the contract for six 130 horse power boilers went to E. Leonard & Sons, London, Ont., through George H. Evans, of St. John. N.B. This winter the company will get out about 8,000,000 feet of logs. In their shingle mill, which will not be started till next spring, they have on hand about 3,000,000 feet of cedar logs and in addition they expect to cut this winter 1,500,000 feet.

Western Canada

The Cowan Lumber Company will erect this winter at Cowan, north of Prince Albert, Sask., a mill costing a million and a half dollars.

The Battle River Land & Investment Company, Limited, lumber merchants, Sedgewick, Alta., have been succeeded by the Battle River Lumber Company, Limited.

It is reported that electricity will be utilized by the Brooks-Scanlon-O'Brien Lumber Company, in their logging operations at the Gordon Pasha lakes, just north of Jervis Inlet, B.C. The electrical energy for the operation of the motor driving cable drums in the woods will be secured from the power house to be erected by the company on Powell river in connection with its projected pulp and paper industry. With the displacing of the steam engine in the woods will disappear the cause of 95 per cent. of the bush fires which have wrought so much damage to the standing timber of the coast region of British Columbia. This is the opinion of practical loggers who know the ever present danger of the energetic little spark vomiting upright boiler in the woods.

Manitoba timber land sales aggregating more than \$15,000 were negotiated by E. F. Stephenson for the Dominion Government on Dec. 1. The sales were the first in Winnipeg under the provisions of the Dominion Lands Act passed at the session of Parliament of 1907-1908. Previous sales were made at Edmonton, Calgary and New Westminster. The new sales comprised two berths of 6.68 square miles and 24.11 square miles. An upset or reserve price of \$1,312 was set on the 24 miles property and \$5,552 on the smaller acreage. The larger privilege for 24 miles, situate on the west shore of Lake Washaw bay, was sold after lively bidding for \$10,010. The purchasers were the J. D. McArthur Company, Limited, of Winnipeg, and the deal was negotiated by W. P. MacDougall. John Gunn, of Winnipeg, bid in 6.68 square miles on the Winnipeg river, in the vicinity of Point du Bois, for \$5,000.

MANUFACTURERS OF QUALITY LUMBER AND SHINGLES

There's no need to Argue

There's no room for argument.

Fenderson "Quality" products have developed business wherever introduced. Most dealers know this, do you?

Our Quebec Spruce and old growth White Pine

are of excellent character because they grow that way.
Our grades are tip-top because we make them that way.
Our dressing is of the finest because we dress that way.

We can supply Spruce, Pine, Shingles and Lath in the same car.

John Fenderson & Co., Inc.

Saw & Shingle Mills:

OUR QUALITY STOCKS: Flooring, Ceiling, Partition, Novelty Siding,
Bevel Siding, Moulding, New Brunswick Cedar Shingles, Lath, etc.

"QUALITY IS THE BEST POLICY"

Largest and Best Assorted Stock of Dry Spruce in Canada

Your Good Money

can easily go to waste through a little mistake in buying machinery

Profit by the mistakes of others who have tried various shingle machines and have finally purchased an ORIGINAL "DUNBAR".

This machine has turned out as high as 21,000 shingles in one day in Eastern Canada where the timber is of medium growth. In British Columbia, where the lumber is of great size it has been known to turn out as high as 36,000 shingles in a day. It is the machine with the best reputation and the best reasons for having that reputation.

What more do you want than a shingle machine that will turn out

Shingles

Shingles

Shingles

as long as you supply the lumber? No repairing, no delays and no saw hammering; nothing but high class shingles and a minimum amount of sawdust, etc. Equipped with "Ring Oilers," the only successful remedy for hot boxes.

Why Don't You Get One?

Patentees and Sole Manufacturers

Fredericton, N. B.

The E. Long Manufacturing Co., Limited

Manufacturers of

Orillia, Ontario

Sawmill, Shingle, Lath and Transmission Machinery

No. 3 Steel Carriage—Built to open any required distance from saw line.

We build a full line of steam actuated machinery, including **Steam Feeds, Kickers, Log Stops, Loaders, Niggers, Cant Flippers**, etc. We build a very complete line of modern **Lath Machinery**, also **Shingle Machinery**. Let us send you cuts and quote prices before ordering.

The Improved Hot Blast Grate

develops more heat from green, wet or frozen sawdust or mill refuse, than an ordinary draft grate develops from wood or coal. The most modern and economical grate on the market. Increases steaming power of boiler 50 per cent.

We are the sole manufacturers for Ontario, Quebec, and the Maritime Provinces, for this grate. It will save you money, regardless of the kind of fuel used. We have many testimonials bearing out this statement.

Here is one :

Berriedale, Ont., June 28/09.

The E. Long Manufacturing Co., Limited, Orillia.

Dear Sirs,

With reference to Hot Blast Grate purchased from you on trial about six weeks ago, we have found it to be one of the most profitable things we ever put in any of our saw-mills. It is much cheaper and more convenient than any sort of Dutch Oven. We placed it under two 6 foot boilers where we saw Spruce and Balsam logs, the sawdust of which makes poor fire. Before we began using the Hot Blast Grates we burned from 3 to 4 cords of dry slabs daily, and even then had a deficiency of steam, but now we have all the steam we desire, and the only fuel used is sawdust.

(Signed) THE HIGHLAND LUMBER CO.

We will ship our **Hot Blast Grates** to any reliable person or firm on 30 days' trial, to be returned at our expense if not as represented.

Catalogues sent and full information cheerfully given on application.

Berlin Quality Counts

94X Fast Feed Planer and Matcher

Six Bitted Round
Cylinders, Twelve
Bitted Round
Side-Heads. :: ::

Side-Head Jointer.

Set - Grind - Joint
Device. :: :: ::

Perfect Work at 150 to 200 Feet per Minute

The 94x is not the highest priced matcher on the market. It has features which can not be found elsewhere, yet we are not asking as much as you can pay for other machines on the market to-day.

You are offered a machine of proven capacity, that will turn out a higher grade of flooring at 100 to 200 feet per minute than the ordinary matcher will at 50 feet per minute.

You are offered, in the 94x, a matcher whose features of construction are such as to prevent the tearing out of knotty or cross grained places, thereby raising the grades.

You are offered a machine with cylinder and side-head construction of proven capacity and we furnish eight or twelve bitted side heads designed by ourselves.

You are offered, in the side-head mechanism, a construction which can not be choked down at 200 feet per minute.

And notwithstanding that you are offered the above as a fair representation of what you purchase, the actual cost in dollars and cents is less than some other machines offered you.

One 94x will actually turn out more well finished lumber than three ordinary matchers because it runs steadily hour after hour and not several hours with tie-ups for break downs or time losses for sharpening knives.

A short time ago a firm put in one 94x to do the work of four light machines. Consider the saving in labor. The expense of maintaining the 94x is also less because there are fewer parts to give trouble.

We would like to show you where the 94x machines are going in. A circular of the machine will give you all the details and show why the machine is making such a success.

The Gordon Hollow Blast Grate

The Heaviest, Most Durable and Most Efficient Blast Grate on the Market

Pays for Itself in One Week

"The Gordon Hollow Blast Grate saved us enough on FUEL the FIRST WEEK to PAY FOR ITSELF. BESIDES increasing the cut of our mill by ONE-HALF."—Kinsbury & Henshaw, Antigo, Wis.

Adds from 25 to 50% to the Efficiency of a Boiler

"We installed your Hollow Blast Grate System in connection with our saw mill boilers several months ago. We were VERY SHORT OF STEAM at that time, and were undertaking to burn considerable WET CYPRESS DUST from our shingle mill. After installing the Hollow Blast Grate System we HAD NO FURTHER TROUBLE with our boilers steaming. We are getting AT LEAST 20% MORE STEAM and could possibly push them to 25% MORE. We consider the Gordon Hollow Blast Grate one of the BEST INVESTMENTS we ever made."—Aycock Lumber Co., Aycock, Fla.

"The blast grates you sold me at Sylvania, O., INCREASED OUR STEAMING CAPACITY 50%, and enabled us to make plenty of steam in the winter time from FROZEN SAWDUST."—R. C. Gillett, Waverly, Va.

Gives as good results with wet, green or frozen sawdust as a Draft Grate gives with dry wood.

"We have used your Hollow Blast Grates CONTINUOUSLY since they were installed, which we believe was about FIFTEEN YEARS AGO (The actual period was 16 YRS. 8 MOS. G. H. B. G. Co.) Prior to that time we were compelled to SEASON our fuel—the best of WOOD—to have a grade that would make us

sufficient steam to keep our plant running, and EVEN THEN were compelled to stop at times during working hours to raise steam. After putting in your grates we make a sufficient amount of steam WITHOUT TROUBLE, using GREEN ELM DUST. The grates are apparently in AS GOOD SHAPE AS WHEN INSTALLED, and we consider them A WONDERFUL INVENTION."—G. V. Griffith & Son, Albany, Ind.

Saves Labor in Firing

"Your grates have effected a saving of about ONE-HALF in LABOR in the fire-room, and while using nothing but SAWDUST and GREEN MILL CLIPPINGS, have given us FULLY 33½ PER CENT HOTTER FIRES."—The Ohio Wheel Co., Delphos, O.

Is Practically Indestructible

"I used your Hollow Blast Grates at stave mills at different points for some TWENTY YEARS, and they are JUST AS GOOD AS WHEN PUT IN, and I can burn any WET BARK AND REFUSE that otherwise COULDN'T BE USED AT ALL. They are the cheapest grate one can use, for they NEVER BURN OUT."—S. P. Shelly, Holgate, O.

The men who have made the Gordon Hollow Blast Grate what it is—our president, our secretary and treasurer, our superintendent, our foreman and our designer—have all been identified with the business since the company was organized, while our vice-president has been with us for fifteen years.

Our services are, therefore, those of experts.

Gordon Hollow Blast Grate Co.

Greenville, Michigan

Also Manufacturers of The Celebrated "Tower" Line of Edgers and Trimmers

Madison Williams' Edgers

will all do perfect work

We build a complete line of edgers for large or small mills.

The cut represents our No. 2 edger, which carries two or three saws, and has a capacity of 15,000 to 20,000 feet per day. The feed rolls are more efficient than those usually found on edgers of this type, and they do not mark the lumber. We sell this edger at a price which makes it easily available for any kind of mill.

Full particulars and prices on application. We also design and build a complete line of saw mill machinery including saw carriages, edgers, trimmers, slab slashers, swing saws, live rolls, gunshot steam feeds, steam niggers, kickers and loaders, shingle machines, lath mills, bolters, etc.

Sheldon Slow Speed Exhaust Fans

The fans that are revolutionizing the shaving exhaust business. They will handle wet or dry, long or short shavings and sawdust, and will do this work with a guaranteed reduction in speed of from 25 to 40% less, and with a power consumption of from 20 to 35% less than any other exhaust fan.

Descriptive circulars sent on request.

Sheldons, Limited - Galt, Ontario

With your increasing business now that the dull times are over, you cannot afford to carry shavings to the furnace room in the old way. Progressive managers are just realizing the great saving effected where shavings are handled by the fan system. All the operator has to do is to open a damper in a pipe and the fan does the rest. Floors and machines are kept clean, and space formerly taken up by shavings is kept clean for stock. We would like to tell you what it would cost to install a system in your factory, mill or shop.

The cheapest way to skid and load logs is by steam power. The

Universal Logger

is a combined two line skidder and loader with separate engine for loading with steel skidding boom and steel swinging loading boom.

It is self-propelling, spots its own cars and moves rapidly from point to point, saving time and the usual switching expense.

Ample water tank capacity is located between the trucks, and the frame is constructed to permit empty cars to pass through the machine for loading by means of its own power.

This machine is especially adapted for light steel or wooden rails.

R. H. SMITH CO., Limited

— St. Catharines, Ont. —

We are the Sole Manufacturers of Saws under the **Simond's Process** in the Dominion of Canada

There is no process its equal for tempering circular saws. Other makers recognize this fact, as some of them, in order to sell their goods, claim to have the same process. **All such Claims are FALSE,** as the patentee in the U. S. and ourselves are the only firms in the world who use it.

INSERTED TOOTH SAWS

Notice the improved shank. We call particular attention to the swell which strengthens it at the weakest part and which gives it more wear than the old style.

Shanks made in usual gauges and to fit your saws perfectly.

SHINGLE SAWS

The quality of the "Simonds" Shingle Saws is proven by the fact that the largest shingle and machine manufacturers in Canada are using them.

Run a "Simonds" and you will increase your output.

CROSS-CUT SAWS

THE "NARROW LEADER"
REFINED SILVER STEEL.

The Simonds Temper and style of tooth make the "Leader" the fastest and easiest cutting saw manufactured.

Value, not Venture

It is important that you make no mistake in the selection of Cutter Heads.

The thorough symmetrical design—the marked mechanical advance—the unusual durability of

The Shimer Cutter Head

is gaining favor daily in the mills of the country

The large number now in use in all parts of the world, giving good honest service, and paying for themselves every few weeks, is one of their best arguments for your consideration.

Assuming that you are in business with the commendable object of making money, we assure you there is no better, no surer way, of adding to your mill's reputation, increasing your profits and building up a good business than by equipping your machines with the Shimer Cutter Heads.

They are economical tools because they last long and cost very little—because they need so little time and labor to keep in working order, and you lose so little material by having them on your machine.

By turning the Expansion Ring one stop the cut of the

The dealer who accepts your order for the Shimer Cutter Head and supplies you with another means to deceive you in no small matter. Look for the Name and Trade Mark "The Shimer Cutter Head" stamped on every genuine tool. Any other is spurious—send it back—demand the genuine, of quality and helpfulness, with a record of 40 years of upbuilding and improvement. It costs no more.

Bits is changed from tight to loose or vice versa, to accommodate the condition of the woody fiber the operator may be working, saving the time usually consumed by the old way of adjusting the cutters separately.

Material is saved because the set of the Bits on the Shimer Cutter Heads enable them to cut in a shearing manner with the diamond tool point of the Bit leading in the cut, shaving the chips away from the divided incut, thus obviating the tearing out of knots and splinters so common with the old style straight cutters.

It will pay you to investigate the merits of these tools. We make it easy for any intending purchaser to do this, by sending them on 30 days trial, returnable if not satisfactory.

Steam Actuated

Single and Double

Log Deck Machinery

Our Stationary Niggers are built single and double cylinder, in sizes to fill the requirements of any mill.

The Cylinders are provided with steam ports instead of outside pipes, thereby avoiding leaky joints and loss of steam. They are made 8 in. and 10 in. in diameter, cast especially strong where necessary.

Valve Gearing and Valves of a newer and stronger design. Steam is admitted through a check valve, which regulates the exhaust to provide a steam cushion to the piston at both ends of the cylinder. This eliminates any danger of the cylinder heads being forced out by the piston. The valves operate easily and quickly by one lever only. Valve travel is short and the same distance in each cylinder.

Guide Rods of forged steel shafting, same diameter as piston rods, are carried with one end attached to the upper cylinder head to make the machine more rigid and self contained.

Cross Heads, extra heavy, bored to fit piston rods and guide bars, and provided with patent improved oiling arrangement.

Nigger Bars of cast and wrought steel, wider and stronger than the old style bars, fitted with forged steel teeth, hinged to drop back out of the way as the bar recedes.

New Spring Cushion Floor Plate, extra heavy, constructed to take up shock of the bar on the spring cushioned end pieces. All Cylinders and Valves are **thoroughly tested** before shipment.

NOTE: The accompanying cut has been used merely to show the general arrangement of our Stationary Nigger, as the cuts for our new Nigger, described above, are still at the Engravers.
